

Index

a

acetic acid 207, 208
 acid hydrolysis 137, 138
 acidification 197, 201
 adjacency matrices 156, 158
 agricultural production
 – chemical industry 44, 45
 – current production capacity 36–40
 – future prospects 43, 44, 218
 – historical and projected demands 33, 34, 36–44
 – increasing availability of renewable raw materials 43
 – increasing production capacity 40–43
 – life cycle analysis 188, 211
 – logistics 71–73
 – petrochemical production capacity 33, 34
 – potential raw materials 34, 35
 – scope for substitution 35, 36
 – socioeconomic factors 143, 144
 – traditional raw materials 34
 – value chains 100–104
 agricultural sector model (ASM) 151
 algal feedstocks
 – biorefineries 127–129
 – logistics 68, 69
 – value chains 115–117
 alkaloids 21–23
 alkenes 104
 amino acids 18
 amylopectin 16
 analytic modeling methodologies 150–155
 animal fats 105
 areas of protection (AoP) 194
 artificial fertilizers 40, 41
 artemisin 20
 ASM, *see* agricultural sector model
 aspartic acid 131

b

bacterial nitrogen fixation 8
 bagasse, *see* sugarcane bagasse
 barley feedstocks 63
 benzene 139, 140
 benzyloquinoline 21, 22
 Bergius method 137
 bio-oil 138
 bioaccumulation 41, 42
 biobased economies 5, 217
 biobased products
 – classification 172, 173
 – conversion technologies 171, 172
 – current status 173, 174
 – definition 170, 171
 – global production 171, 172
 – life cycle analysis 196–211, 219, 220
 – lubricants 177–179
 – market analysis 169–186
 – outlook and perspectives 182–184
 – polymers 174–177
 – solvents 179, 180
 – surfactants 180–182
 biobutanol 125
 biochar 138
 biochemical products 173
 biodegradable polymers 134, 175–177
 biodiesel
 – agricultural production 35, 36
 – biorefineries 121, 125–127
 – current and future outlook 125–127
 – life cycle analysis 200–204
 bioethanol
 – agricultural production 42, 43
 – biorefineries 121, 123, 124, 136
 – current and future outlook 123, 124
 – life cycle analysis 200–204
 – value chains 104, 107–110
