### List of Contributors XI

<b>1</b>	<b>Introduction to Renewable Resources in the Chemical Industry</b>	<b>1</b>
	<i>Roland Ulber, Kai Muffler, Nils Tippkötter, Thomas Hirth, and Dieter Sell</i>	
<b>2</b>	<b>Plants as Bioreactors: Production and Use of Plant-Derived Secondary Metabolites, Enzymes, and Pharmaceutical Proteins</b>	<b>7</b>
	<i>Peter C. Morris, Peter Welters, and Bernward Garthoff</i>	
2.1	Introduction	7
2.2	Renewable Resources in the Chemical Industry	7
2.2.1	Commodity Production	8
2.2.2	Production Problems	9
2.2.3	Natural Rubber as Compared to Synthetic Rubber	12
2.2.4	Cellulose and Other Fibers	12
2.2.5	Paper Production	13
2.2.6	Starch Production	15
2.2.7	Sugar Production and Improvement of Yield by Genetic Engineering	16
2.3	Fine Chemicals and Drugs	17
2.3.1	Plant Cell Culture	17
2.3.2	Terpenoids	17
2.3.3	Amino Acids	18
2.3.4	Fatty Acid Derivatives	18
2.3.5	Plant Protection	19
2.3.6	Small Molecule Drugs	19
2.3.7	Polyphenols and Resveratrol	22
2.4	Plant-Made Pharmaceuticals	22
2.4.1	Vaccines	24
2.4.2	Monoclonal Antibodies	25
2.4.3	Other Therapeutic Proteins	26
2.4.4	Methodologies for PMP Production	26
	References	28

<b>3</b>	<b>World Agricultural Capacity</b>	<b>33</b>
	<i>John K. Hughes</i>	
3.1	Petrochemicals Today	33
3.2	Renewable Chemicals	34
3.2.1	Traditional Uses	34
3.2.2	Potential Raw Materials	34
3.2.3	Scope for Substitution	35
3.3	Agricultural Production	36
3.3.1	Current Situation	36
3.3.2	Increasing Production	40
3.3.3	Increasing Availability	43
3.3.4	Future Prospects	43
3.4	Supplying the Chemical Industry	44
3.5	Summary	45
	References	46
<b>4</b>	<b>Logistics of Renewable Raw Materials</b>	<b>49</b>
	<i>Magnus Fröhling, Jörg Schweinle, Jörn-Christian Meyer, and Frank Schultmann</i>	
4.1	Introduction	49
4.2	Determining Factors for the Logistics of Industrial Utilization Chains for Renewable Raw Materials	50
4.2.1	Operating in a Natural Environment	50
4.2.2	Characterization of Selected Renewable Raw Materials	52
4.2.2.1	Oil Crops	52
4.2.2.2	Sugar Crops	57
4.2.2.3	Starch Crops	60
4.2.2.4	Lignocellulosic Biomass	64
4.2.2.5	Other Biogenic Residues	67
4.2.2.6	Algae	68
4.2.3	Actors and Stakeholders—Mobilization of the Renewable Raw Materials	69
4.3	Processing Steps of Renewable Raw Material Logistic Chains	71
4.3.1	Cultivation and Harvesting for Selected Types of Renewable Raw Materials	71
4.3.1.1	Agricultural Production	71
4.3.1.2	Forest Production	75
4.3.2	Transport	79
4.3.3	Storage	81
4.4	Design and Planning of Renewable Raw Material Logistic Chains	82
4.4.1	Determining Plant Sizes: Economies of Scale vs. Minimization of Transport Load	82
4.4.2	Facility Location Planning and Determining the Logistical Structure of a Renewable Raw Material Utilization Chain	85
4.4.3	Consideration of Competing Utilization Pathways	86

4.4.4	Demand for Integrated Assessment and Planning Methods for Renewable Raw Material Logistic Chains	88
4.5	Summary and Conclusions	89
	References	90
<b>5</b>	<b>Existing Value Chains</b>	<b>95</b>
	<i>Christoph Syldatk, Georg Schaub, Ines Schulze, Dorothea Ernst, and Anke Neumann</i>	
5.1	Industrial Biotechnology Today—Main Products, Substrates, and Raw Materials	95
5.2	White Biotechnology—Future Products from Today’s Raw Materials?	97
5.3	Effects of Feedstock and Process Technology on the Production Cost of Chemicals	100
5.3.1	Introduction	100
5.3.2	Simplified Procedure for Cost Estimation	102
5.3.3	Example: Alkenes from Petroleum Fractions and from Bioethanol	104
5.4	New Raw Materials for White Biotechnology	105
5.5	Case Studies: Lignocellulose as Raw Material and Intermediates	107
5.5.1	Bioethanol and Chemical Production from Lignocellulosic Biomass	107
5.5.2	Limitations	110
5.5.2.1	Substrate	110
5.5.2.2	Pretreatment	110
5.5.2.3	Composition of Biomass	111
5.5.2.4	Hydrolysis	111
5.5.2.5	Fermentation	112
5.5.3	Research and Development Potential	112
5.6	Case Studies: “SCOs” as Raw Material and Intermediate	114
5.6.1	Microbial SCOs	114
5.6.2	Industrial Use of Microbial SCOs	114
5.6.3	Limitations and Research and Development Potential	115
5.7	Conclusions	117
	References	118
<b>6</b>	<b>Future Biorefineries</b>	<b>121</b>
	<i>Abbas Kazmi and James Clark</i>	
6.1	Introduction	121
6.2	Current and Future Outlook for Biofuels	122
6.2.1	Bioethanol	123
6.2.2	Biobutanol	125
6.2.3	Biodiesel	125
6.2.4	Microalgae	127
6.3	Chemicals from Renewable Resources	129
6.3.1	Succinic Acid	129

6.3.2	Aspartic Acid	131
6.3.3	Levulinic Acid	132
6.3.4	Sorbitol Acid (SBA)	132
6.3.5	Glycerol	133
6.4	The Role of Clean Technologies in Biorefineries	134
6.4.1	Separation Technologies	134
6.4.2	Supercritical CO <sub>2</sub> Extraction	135
6.4.3	Cellulose Hydrolysis	136
6.4.4	Thermochemical Processing	138
6.5	The Size of Future Biorefineries	139
6.6	Conclusions	139
	References	140
<b>7</b>	<b>Economic and Social Implications of the Industrial Use of Renewable Raw Materials</b>	<b>143</b>
	<i>Antonio Lopolito, Maurizio Prospero, Roberta Sisto, and Pasquale Pazienza</i>	
7.1	Introduction	143
7.2	Biorefinery Industry and the Development of EU Rural Areas	146
7.2.1	Overview of Different Models of Biorefinery Industry	146
7.2.2	Potential Effects of the Global Model	147
7.2.3	Potential Effects of the Local Model	149
7.2.4	Which Biorefinery Model for EU Rural Areas?	149
7.3	From Analytic to Systemic Modeling Methodology of the Biorefinery Industry	150
7.3.1	The Search for a Theoretical Framework Capable of Dealing with Novelty, Uncertainty, Ignorance, and Unpredictability	150
7.3.2	FCMs to Find Knowledge in Complex Systems	152
7.4	Stakeholders' Perceptions of Biorefinery in Rural Areas: Issues and Lessons from the South of Italy	155
7.4.1	A Network Analysis of Stakeholders' Knowledge	156
7.4.2	Interpretation of Results	162
7.4.2.1	Determinants	162
7.4.2.2	Influential Conditions	164
7.4.2.3	Effects	164
7.5	Concluding Remarks	165
	Acknowledgments	166

<b>8</b>	<b>Biobased Products—Market Needs and Opportunities</b>	<b>169</b>
	<i>Rainer Busch</i>	
8.1	Introduction	169
8.2	Definition	170
8.3	Basic Technology for the Conversion of Renewable Raw Materials	171
8.4	Classes of Bioproducts	172
8.5	Current Status	173
8.5.1	Polymers	174

8.5.1.1	Polylactic Acid	174
8.5.1.2	Polyethylene	175
8.5.1.3	Others	175
8.5.1.4	Potential	176
8.5.2	Lubricants	177
8.5.3	Solvents	179
8.5.4	Surfactants	180
8.6	Outlook and Perspectives	182

<b>9</b>	<b>Life-Cycle Analysis of Biobased Products</b>	<b>187</b>
	<i>Liselotte Schebek</i>	
9.1	Introduction: Why Life-Cycle Analysis of Biobased Products?	187
9.2	The Methodological Framework of LCA	188
9.2.1	General Goal and Framework of LCA	188
9.2.2	Phases of LCA	189
9.2.2.1	General Scheme	189
9.2.2.2	Goal and Scope Definition	190
9.2.2.3	Life Cycle Inventory (LCI)	190
9.2.2.4	Life Cycle Impact Assessment (LCIA)	192
9.2.2.5	Interpretation	196
9.2.3	Databases and Software for LCA	196
9.3	Specific Methodological Aspects for LCA for Biobased Products	196
9.3.1	Methodological Outline	196
9.3.2	Accounting for Land Use in LCA	198
9.3.2.1	Conceptual Aspects for Treatment of Land Use in LCA	198
9.3.2.2	Land Occupation and Land Transformation	198
9.3.2.3	Impacts of Land Use	199
9.4	LCA Studies for Biobased Products: Major Findings and Insights	200
9.4.1	Biofuels	200
9.4.2	Biopolymers	204
9.4.3	Products from Biotechnological Processes	206
9.4.4	Composites	208
9.4.5	Consumer Products	209
9.4.5.1	Packaging	210
9.4.5.2	Products for the Building Sector	210
9.4.5.3	Lubricants	210
9.5	Conclusions	211
	References	212
