  – of direct wafer bonding in ultrahigh
    vacuum 90
  – of elastomer bonding/de-bonding
    technique 363
  – of electrostatic temporary wafer bonding
    379 f
  – of eutectic gold-tin bonding 120, 133,
    150 f, 157
  – of glass frit bonding 14 ff
  – of gold/tin SLID bonding 204
  – of hybrid copper/BCB bonding platform
    220
  – of hybrid copper/BCB redistribution layer
    bonding 218 f
  – of plasma-activated bonding 111
  – of polymer adhesive wafer bonding 34
  – of three-dimensional integration
    technology 306 ff
  – of metal/silicon oxide DBITM hybrid
    bonding 273 f
atmospheric-pressure plasma 107, 112
b
back-end-of-the-line (BEOL) process see also TSV processing 216, 238, 303
backgrinding 339 f, 359
backside contact formation 359, 375 ff, 379
backside metallization 380
backside processing 329 ff, 334 f, 342, 356
backside solder bump 341
backside TSV 311
BCB see benzocyclobutene
benzocyclobutene (BCB) 40, 54, 217, 283
BEOL interconnect 303
BEOL see back-end-of-the-line process
binder burn-out 10
binder polymerization 10
bipolar chucking 369
BISV see bonded interstrata via
blanket copper-to-copper direct bonding 161 ff, 239 f, 245
blister test 109
blistering 93
bond chamber
– for adhesive wafer bonding 22
bond strength
– in direct copper/silicon dioxide bonding 241, 246
– of anodic wafer bonds 69
– of copper bonded wafers 168, 246
– of glass frit bonds 14
– of MEMS 287
– of plasma-treated wafers 103
– of SLID bonds 207 f
– of SOG layer bonds 23 ff
– techniques for testing the 108, 240, 245, 248
bond wave propagation 82
bonded interstrata via (BISV) 215, 218, 303
bonding
– of bumped wafers 363
– of carrier and device wafer 358 f
– of patterned surfaces 243
bonding current 67
bonding interface 14
– analysis of, by electron dispersive X-ray (EDX) 250
– analysis of, by in situ thermal evolution X-ray reflectivity (XRR) 248 f
– dislocations in the 92
– electrical characterization of copper/copper direct 252
– in DBI™ 266
– in direct copper/silicon dioxide bonding 240 ff
– in the hybrid copper/BCB system 224 ff
– properties of 90, 251 ff
bonding pressure 56, 58
– in copper/tin SLID bonding 193 f
– in localized wafer bonding 51
– in thermocompression copper bonding 167
bonding strength see bond strength
bonding temperature 48, 56, 58
– in copper/tin SLID bonding 193 f
– in thermocompression copper bonding 167
– of anodic wafer bonding 63
– of anodic wafer bonding with glass thin films 75 f
– of polymer adhesive wafer bonding 33
boundary layer 35
bridge dicing 283
B-stage polymer 42, 54
bubble see interface defect 93
bump reflow 121 ff
bumping 341
c
C2W bonding see chip-to-wafer bonding
capillary force 83
capped inertial sensor 15
carrier wafer 330, 338, 356, 359
– material for 372
– re-use of 364
– processing of 357
cavity in micromechanical devices, vacuum-sealed 70
characterization of wafer bond quality
– criteria for 108
– of copper bonded wafers 169 ff
– of plasma-activated wafer bonds 110 f
chemical bonding 36
chemical-mechanical polishing (CMP) 24, 31, 114, 167, 218, 222, 239
chip alignment 349, 381
chip design based on three-dimensional integration 307, 312
chip stacked flexible memory 319
chip-on-chip (CoC) technology 308
chip-to-wafer (C2W) bonding 308
chip-to-wafer stacking using ICV-SLID soldering 342
chip-to-wafer thermode bonding 135
chuck 112
– electrostatic wafer chuck (ESC) 367, 371
– for glass frit bonding 13
– for polymer adhesive wafer bonding 44
– vacuum 356, 360
CIS see CMOS image sensor
clamping force 368, 371
CMOS
– compatibility to bonding methods 114, 204, 262
– low-k three dimensional integration 276 ff
– possible influence of electrostatic fields on 378
– shrinkage 307
CMOS image sensor (CIS) 114, 310 ff
– three-dimensional backside illuminated 273 ff
– via-last process on 338 ff
CMOS technology 178
CMOS wafer 29, 30, 94, 271, 273
CMP see chemical-mechanical polishing
CoC memory on logic solution 319 ff
CoC technology see chip-on-chip technology 308 ff
coefficient of thermal expansion (CTE) 39, 269
contact resistance of copper/copper direct bonding interfaces 251 ff
contamination removal 103, 166 ff
copolyester 41
copper bonded layer
– morphology of 163, 165
– oxide distribution in 164
copper DBITM 270
copper dishing 239 ff
copper microbump 202
copper nanorod 177
copper/copper bonding 161 ff
– alignment accuracy of 171 ff
– application in three-dimensional integration 217 ff
– direct 177, 238 ff
– for three-dimensional TSV interconnection 303 ff
– low-temperature 176 ff
– nonblanket 174 ff
copper/dielectric hybrid bonding 176
copper/silicon dioxide DBITM hybrid bonding 270
copper/silicon dioxide direct bonding 240 ff
– advantages of 237
copper/tin phase diagram 187
copper/tin SLID process 184 ff, 346
– application of 201 ff
– bond formation 189, 191 ff
– bonding parameters used in 193
– copper/tin-to-copper/tin symmetric bonding 198
– fluxless oxidation-free 196 ff
– required material properties for 190
copper-to-copper bonding see also copper/copper direct bonding 216, 242, 245 ff, 257
covalent bond 34
crack-opening method 30, 108 ff
creeping see viscoelastic effect
CTE mismatch 46 ff, 53, 102, 155 ff, 204, 208, 267
CTE see coefficient of thermal expansion
curing 37
3D BSI-CIS see CMOS image sensor,
three-dimensional backside illuminated daisy chain structure 148 ff, 154 ff, 210, 256 ff, 270 ff, 340
damascene CMP process 239
damascene metal/silicon dioxide DBITM process flow 263
damascene-patterned copper 176, 218
DBC substrate see direct bonded copper substrate
dBD see dielectric barrier discharge
DBITM technology (direct bond interconnect) 177, 261 ff
dCBE technique see double cantilever technique
DDR memory 315 ff
debonding 331
– room temperature, low stress 335 ff
– single-wafer 333
– slide-off 332
– using a release layer and liftoff 335 ff
– 355
– process of cold 360 ff
Debye force 83
deglazing 9
degradation of MOS
– by high electric fields 73 ff
– by sodium contamination 72
deposition
– of polymer adhesives 44
– of thin glass layers 75
device encapsulation 282 ff
device layer 94, 135, 301, 304
device wafer 356, 359
– thickness of 361
– via first 330
– via last 330
dicing 282
dicing before grinding (DBG) approach 363
die assembly with SLID bonding 347 f
die bonding 120
  – die-to-wafer bonding 148, 238, 255
  – die-to-wafer stacking using ICV-SLID soldering 342 ff
dielectric barrier discharge (DBD) 89, 107, 11
dielectric bonding 303
dielectric layer material 373 f
diffusion bonding 250
diffusion copper bonding see also thermocompression copper bonding 162 f
diffusion theory 36
  dipole-dipole interaction 34
direct bond interconnect see DBITM technology
direct bonded copper (DBC) substrate 205, 208
direct wafer bonding 81 ff
  – in advanced substrates for microelectronics 93, 290
  – in ultrahigh vacuum 89, 92
  – low-temperature 88
  – of patterned wafers for MEMS 287 ff
  – of silicon wafers 102
  – physical characterization 82 ff, 91
  – principle of 101
  – properties of wafers for 82
  – surface chemistry of 82 ff, 91
  – techniques for 84 f
  – using hydrophilic surfaces 84 f, 90, 102
  – using hydrophobic surfaces 86, 102
  dislocation in bonded hydrophobic wafers 92
double cantilever beam (DCB) technique 241, 245
DRAM system
  – by Elpida 317 f
  – by NED 317 f
  – by Samsung 315 f
e-carrier see mobile electrostatic carrier
  edge chipping 337
  edge pretrimming 337
  edge protection 337, 360
  elastomer adhesive 36, 38, 362
  elastomer coating layer 357 ff
  electric field 368
  electrical characterization of bonded interconnects 251 ff
  electrical degradation 71 f
  electrical testing using daisy chains 339
electrode material for electrostatic temporary wafer bonding 374
electron probe microanalysis (EPMA) of microbumps 146 ff
  electroplating of gold/tin solder 121, 127, 130 f, 294 ff
electrostatic bonding see anodic bonding
electrostatic clamping 349, 367, 371
  – of foils 381
  – of insulating substrates 381
  – of thin wafers for bumping 380 f
  electrostatic die handling 381
  electrostatic force 65, 71, 83
  – in a plate capacitor 368 f
  electrostatic interaction 36, 65
electrostatic wafer chuck (ESC) 367, 371
capsulation
  – hermetic 120
  – of bolometer pixels 205
  – of MEMS 282 f, 293
  – of surface micromachine sensors 15
  – on wafer level 283
  – vacuum, on wafer-level 70 f
  epoxy adhesive 40, 357 ff, 361
  – injection of 146, 151
eutectic bonding 119 ff
  – advantages of 119 f
  – preconditioning in 125 f, 132
eutectic gold/indium bonding 139 ff, 146
  – fabrication process for LSI test chips applying 149 f
  eutectic gold/tin bonding 120 ff
  – of patterned wafers for MEMS 293 ff

F2F bonding see face-to-face bonding
face-to-face (F2F) bonding 308
feedthrough 283
FEOL process see front-end-of-line process
Ferro FX-11-036 5
field-assisted sealing see anodic bonding
filler for glass frit materials 4, 8
flexible interlayer 26 f, 31
flexible substrate 371, 379
flip-chip bonding 294, 347
flip-chip reflow soldering 121, 127
flip-chip/underfill hybrid bond 261
fluoropolymer 41
fluxless bonding 196 ff
foundry activity 323
four-point bending technique 222 f, 245, 340
fracture toughness 109, 112
frictional nonreflowable surface structure 53
front-end-of line (FEOL) process see also TSV processing 301
fully processed wafer 3
fusion bonding see direct wafer bonding 81

GaAs wafer, SOG-coated 28
GaAs/InP wafer pair bonded with SOG layer 29
GaAs/Si wafer pair bonded with SOG layer 25
germanium-coated wafer 95
germanium-on-insulator wafer (GOI) see germanium-coated wafer
glass crystallization 9
glass frit
– deposition of the 4
– material 4 f
– paste 5
– wetting temperature 11
glass frit bond characterization 14
glass frit wafer bonding 3 ff
– advantages of 14, 17
– application of 14 ff
– basic principles of 3

 side-pin, contact by  291
 silde-off debonding  332
 silent discharge, see dielectric barrier discharge
 silicate SOG layer  23 ff
 silicon lid for MEMS application  134 f
 silicon surface  83
 – hydrophilic  85
 – hydrophobic  86
 silicon wafer  348
 – SOG-coated  22
 silicon/Pyrex glass wafer pair  63
 silicon-glass anodic bonding  64, 75 f
 silicon-on-insulator (SOI) substrate  81, 90, 285
 siloxane SOG film  20
 silver/tin fluxless SLID system  185, 187
 SLID, see solid-liquid interdiffusion bonding
 slip line  289
 sodium contamination caused by anodic bonding  72
 SOG, see spin-on glass
 SOI substrate, see silicon-on-insulator substrate
 solder alloy  119 f
 solder reaction  121 ff, 128
 sol-gel process  19
 solid bridging caused by impurities  83
 SOLID technology  308
 solid-liquid interdiffusion bonding (SLID)  177, 181 f, 347
 – advantages of  181, 211
 – bonding process  189, 191 f
– bond profile 168
– bonding temperature 167
– chip seal design 168
– fabrication of copper bond pads 166 f
– image analysis of the copper bonded interface 170
– microstructure evolution during 164 f
– nitrogen annealing 168
– orientation evolution during 165
– pattern density 169
– size of copper bond pad 169
– structure of copper bond pad 168
– surface preparation of copper bond pads 166 f

thermode soldering 130 ff
thermoplastic adhesive for temporary wafer bonding 332
thermoplastic glue 351
thermoplastic polymer 36, 38, 42, 56
thermosetting polymer 36, 38, 42, 54
thin capping by wafer bonding 15
thin film of glass for anodic bonding 75
thin wafer handling 33, 329, 353 f, 379 f
– support system 355 ff, 367 f
– use of e-carriers for bumping thin wafers 380 f

three-dimensional bonding 139 ff
three-dimensional chip stacking 101
three-dimensional heterogeneous integration 275 f
three-dimensional integration, see also three-dimensional integration 215 ff
three-dimensional IC integration based on copper bonding 174 ff
three-dimensional IC/MEMS stack 324
three-dimensional integrated system assembly 348
three-dimensional integration 132 f, 161, 172, 261
– advantages of 305
– classification of 301
– comparison with PoP technology 305
– heterogeneous 324
– key unit processes 301
– of CMOS with other devices 322 f
– processing steps with hybrid copper/BCB wafer bonding 221
– requirements on bonding quality 216
– schematic of wafer bonding technologies for 302
– strategies for 215 ff
– using temporary wafer bonding 329 ff, 347 ff

– utilizing a thermomechanical debonding approach 338 f
three-dimensional integration platform 216
– using hybrid copper/BCB redistribution layer bonding 217 f
three-dimensional interconnects 220, 237, 264, 266 f, 273 f, 277
three-dimensional LSI 139 f
– test chip fabrication by eutectic indium-gold bonding 149
– wafer-to-wafer bonding techniques for 139
three-dimensional microprocessor chip 151
three-dimensional packaging 329
three-dimensional shared memory chip 151
three-dimensional stacked image sensor 152
through-silicon via (TSV) 140, 145, 151, 201, 215, 238, 282
through-strata via (TSV) 215
through-substrate via (TSV) 33, 301 f, 330
– fabrication of, in electrostatic temporary wafer bonding 374 f
tire pressure monitoring system (TPMS) 324
tool plate for glass frit bonding 13
topography accommodation 227 ff
total thickness variation (TTV) 330, 358, 361
– effect of uniformity on 337
TPMS, see tire pressure monitoring system transient liquid-phase bonding 133, 135 f
TSV formation without stacking 310 f
TSV memory stack 312
TSV processing 301, 364
TSV stacked BGA 321

u
ultrafine leak test 70
ultrahigh vacuum (UHV) 89, 92
ultra thin buried oxide (UT-BOX) layer 94
ultrathin chip handling 352 f
ultrathin dye packaging 363
ultrathin wafer 3555
under-bump metallization (UBM) 130 ff, 182
unipolar chucking 367
UV-curable adhesive 333

v
vacuum chuck 356, 360
van der Waals force 83
van der Waals interaction 34
via etching  339 f
via insulation  339 f
via metallization  339 f
via-first process  301, 319, 330 f, 337, 342
via-last process  301, 310, 330 f
– flow of a  338 ff
– using high-temperature TEOS process  341 f
– with aspect ration of  2:1  341
viscoelastic effect  37
viscous flow of surface layer  103
void  243
– bonding void  225 ff
– crosslink-percentage-controlled  229
– formation of  209, 225 ff, 289
– in bonded wafer pairs  285
– in temporary wafer bonding processes  337
– Kirkendall  124, 128, 132, 209 f
– nanovoid  225 ff
– progression of voiding types  230

\( w \)

wafer alignment, see also wafer-to-wafer alignment  141, 146, 265
wafer bond characterization  108
wafer bonding process integration  287 ff
wafer bonding programm  56
wafer bonding, see also wafer-to-wafer bonding
– bonding of SiC chips to substrates  205
– copper/copper direct bonding  140
