

## Contents

**Preface** XIII

**List of Contributors** XV

**Part I**      **Materials** 1

- 1**      **Organic Semiconductor Materials for Transistors** 3  
*David Ian James, Jeremy Smith, Martin Heeney, Thomas D. Anthopoulos, Alberto Salleo, and Iain McCulloch*
- 1.1      General Considerations 3
- 1.2      Materials Properties of Organic Semiconductors 5
- 1.3      Small Molecule Semiconductors 8
- 1.3.1    Sexithiophene 8
- 1.3.2    Pentacene and Derivatives 8
- 1.4      Polymer Semiconductors 9
- 1.4.1    Thiophene-Based Polymers 9
- 1.4.1.1 Poly(3-Alkylthiophenes) 9
- 1.4.1.2 Thienothiophene Copolymers 12
- 1.4.1.3 pBTTT 14
- 1.5      Semiconductor Blends 17
- 1.6      Device Physics and Architecture 18
- 1.7      Summary 22
- References 23
- 2**      **Characterization of Order and Orientation in Semiconducting Polymers** 27  
*Dean M. DeLongchamp and R. Joseph Kline*
- 2.1      Introduction 27
- 2.2      X-Ray Diffraction 28
- 2.2.1    Thin-Film XRD 29
- 2.2.2    Grazing-Incidence X-Ray Diffraction (GIXD) 38
- 2.3      Near-Edge X-Ray Absorption Fine Structure (NEXAFS) Spectroscopy 47
- 2.3.1    Background and General Features of NEXAFS 47

2.3.1.1	NEXAFS Experimental Considerations	48
2.3.1.2	Chemistry Determination by NEXAFS	52
2.3.1.3	Orientation Analysis in Organic Semiconductors	54
2.3.2	Horizons for NEXAFS	58
	References	59
<b>3</b>	<b>Charge Transport Theories in Organic Semiconductors</b>	<b>67</b>
	<i>Rodrigo Noriega and Alberto Salleo</i>	
3.1	Introduction	67
3.2	Well-Ordered Systems: Organic Single Crystals	68
3.2.1	General Conditions for Band Transport	68
3.2.2	Experimental Evidence for Band Transport in Organic Crystals	69
3.2.3	Band or Bandlike?	72
3.3	Disordered Materials	73
3.3.1	Different Types of Disorder	73
3.3.2	Effect of Disorder on Charge Transport	75
3.3.2.1	Dispersive and Nondispersive Transport	76
3.3.2.2	Transport Models	76
3.3.2.3	Computational Methods	88
3.3.2.4	Comparison with Experiments	91
3.4	Conclusions	101
	Acknowledgments	101
	References	101
<b>4</b>	<b>Silylethyne-Substituted Acenes and Heteroacenes</b>	<b>105</b>
	<i>John E. Anthony and Adolphus G. Jones</i>	
4.1	Introduction	105
4.2	Silylethyne-Substituted Pentacenes	106
4.3	Crystal Packing	108
4.3.1	Properties of Silylethyne-Substituted Pentacenes	109
4.3.2	Electronic Structure Studies	110
4.3.3	Device Studies	112
4.3.4	Blends of Silylethynyl Pentacenes and Polymers	114
4.3.5	Silylethyne Pentacene-Based Polymers	115
4.3.6	Organic Light Emitting Diodes and Photovoltaics Using Silylethynyl Pentacenes	116
4.3.7	Silylethynyl Pentacene n-Type Semiconductors	119
4.3.8	Other Silylethyne-Substituted Acenes in Organic Electronics	120
4.4	Heteroacenes	121
4.4.1	Silylethyne-Substituted Heteroacenes	122
4.4.2	Crystal Packing	123
4.4.3	Device Studies	123
4.4.4	Silylethynyl Heteroacenes for n-Type Applications	129
4.4.5	Blends of Silylethyne-Substituted Heteroacenes and Polymers	130
4.5	Silylethynyl Heteroacene-Based Polymers	131

4.6	Silylethynyl Heteroacene-Based Photovoltaics	132
4.7	Conclusion	132
	References	132
<b>5</b>	<b>Conjugated Semiconductors for Organic n-Channel Transistors and Complementary Circuits</b>	<b>137</b>
	<i>Antonio Facchetti</i>	
5.1	Introduction	137
5.2	Basics of Field-Effect Transistors and Complementary Circuits	138
5.2.1	Field-Effect Transistors	138
5.2.2	Complementary Circuits	141
5.3	Material Design and Needs for n-Channel OTFTs	145
5.3.1	Electronic Structure	145
5.3.2	Contacts and Dielectric	148
5.4	n-Channel Semiconductors for OTFTs	151
5.4.1	Molecular Semiconductors	151
5.4.1.1	Phthalocyanine Derivatives	151
5.4.1.2	Thiophene Derivatives	157
5.4.1.3	Fullerenes	163
5.4.1.4	Rylene and Other Diimide Derivatives	167
5.4.1.5	Other Small Molecular n-Channel Semiconductors	179
5.4.2	Polymeric Semiconductors	181
5.5	Conclusions and Outlook	189
	References	190
<b>6</b>	<b>Low-Voltage Electrolyte-Gated OTFTs and Their Applications</b>	<b>197</b>
	<i>Yu Xia and C. Daniel Frisbie</i>	
6.1	Overview	197
6.2	Introduction to Electrolyte-Gated Organic Transistors	198
6.2.1	Structure and Operating Mechanisms	198
6.2.2	The Development of Electrolyte-Gated Transistors	199
6.2.3	More on the Gating Mechanism in Electrolyte-Gated Transistors	202
6.2.4	Electrical Characterization of Electrolyte-Gated OTFTs	204
6.2.4.1	Low-Voltage Operation	204
6.2.4.2	Use of a Reference Electrode	205
6.2.4.3	Determination of Accumulated Charge	206
6.2.4.4	Switching Time	209
6.2.5	Charge Transport at Ultrahigh Carrier Densities	211
6.3	Applications of Electrolyte-Gated Organic Transistors	213
6.3.1	Printable Low-Voltage Polymer Transistors and Circuits	213
6.3.2	Active-Matrix Display Backplanes	220
6.3.3	Organic Electrochemical Transistors as Chemical Sensors	220
6.4	Conclusions and Outlook	224
	References	225

**Part II Manufacturing 235**

- 7 Printing Techniques for Thin-Film Electronics 237**  
*Vivek Subramanian, Alejandro de la Fuente Vornbrock, Steve Molesa, Daniel Soltman, and Huai-Yuan Tseng*
- 7.1 The Motivation for Printing of Thin-Film Electronic Devices 237
- 7.2 Requirements for Printing Techniques for Electronics Fabrication 239
- 7.3 A Survey of Printing Techniques for Printed Electronics 239
- 7.3.1 Screen Printing 240
- 7.3.2 Gravure/Flexographic/Offset Printing 241
- 7.3.3 Ink-jet Printing 245
- 7.4 Pattern Formation During Printing 247
- 7.5 Printed Device Considerations 250
- References 253
- 8 Picoliter and Subfemtoliter Ink-jet Technologies for Organic Transistors 255**  
*Tsuyoshi Sekitani and Takao Someya*
- 8.1 Introduction 255
- 8.2 Silver Nanoparticle Ink 257
- 8.3 Ink-jet Technologies with Pico- and Subfemtoliter Accuracies 257
- 8.3.1 Picoliter Ink-jet Printing 257
- 8.3.2 Subfemtoliter Ink-jet 260
- 8.3.2.1 Ejection Mechanism 261
- 8.3.2.2 Subfemtoliter Droplets on Organic Semiconductors 261
- 8.4 Manufacturing Processes and Electrical Characteristics of Organic Transistors 264
- 8.4.1 Organic Transistors with Source/Drain Electrodes Printed Using Picoliter Ink-jet 264
- 8.4.1.1 Transistor Characteristics with Changing Droplet Volume 264
- 8.4.1.2 Printed Organic Transistor Active Matrix Using Picoliter Ink-jet 268
- 8.4.1.3 A Large-Area Pressure Sensor Sheet 269
- 8.4.2 Organic Transistors with Source/Drain Electrodes Printed Using Subfemtoliter Ink-jet 270
- 8.4.2.1 TFTs on Polyimide Gate Dielectric 270
- 8.4.2.2 TFTs with Self-Assembled Monolayer as a Very Thin Gate Dielectric 272
- 8.5 Discussion and Future Prospects of Large-Area Printed Electronics 277
- Acknowledgments 279
- References 279

<b>9</b>	<b>Ink-jet Printing of Downscaled Organic Electronic Devices</b>	<b>281</b>
	<i>Mario Caironi, Enrico Gili, and Henning Sirringhaus</i>	
9.1	Introduction	281
9.2	Ink-Jet Printing: Technologies, Tools, and Materials	282
9.2.1	Principle of Operation of Ink-Jet Printers	282
9.2.2	Continuous Ink-Jet Printing Technologies	284
9.2.2.1	Continuous Ink-Jet Printing	284
9.2.2.2	Aerosol Jet Printing	285
9.2.3	DOD Ink-Jet Printing Technologies	285
9.2.3.1	Thermal Ink-Jet Printing	286
9.2.3.2	Piezoelectric Ink-Jet Printing	286
9.2.3.3	Acoustic Ink-Jet Printing	288
9.2.3.4	Electrohydrodynamic-Jet (e-Jet) Printing	289
9.2.4	Conductive Inks for Ink-Jet Printing of Electrodes and Interconnections	290
9.2.5	Ink-Jet Printing of Organic Electronic Devices	293
9.2.5.1	Fabrication of OLEDs by Ink-Jet Printing	294
9.2.5.2	Fabrication of Organic Thin Film Transistors by Ink-Jet Printing	294
9.2.5.3	Fabrication of Organic Photovoltaic Cells by Ink-Jet Printing	296
9.2.5.4	Other Organic Devices	297
9.3	High-Resolution Printing of Highly Conductive Electrodes	297
9.3.1	Ink-Jet Printing of Narrow Linewidths	298
9.3.2	Ink-Jet Printing Assisted by Surface-Energy Patterns	301
9.3.3	Self-Aligned Printing	302
9.3.4	High Yield Printing of Single-Droplet Nanoscale Electrode Arrays	304
9.4	Printing of Downscaled Organic Thin Film Transistors	308
9.4.1	Downscaling Requirements	308
9.4.2	Gate Dielectrics for Downscaled Organic TFTs	309
9.4.2.1	High- <i>k</i> Dielectrics	310
9.4.2.2	Ultra-Thin Dielectrics	312
9.4.3	Organic TFTs Printed with Subfemtoliter Printer	314
9.4.4	Mask-Free, All Solution Processed SAP TFTs	315
9.4.5	Self-Aligned Gate Contacts for Fast-Switching Transistors	316
9.5	Conclusions and Outlook	320
	Acknowledgments	321

<b>10</b>	<b>Interplay between Processing, Structure, and Electronic Properties in Soluble Small-Molecule Organic Semiconductors</b>	<b>327</b>
	<i>Oana D. Jurchescu, Devin A. Mourey, Yuanyuan Li, David J. Gundlach, and Thomas N. Jackson</i>	
10.1	Introduction	327
10.2	Transport Limits in Crystalline Semiconductors	328
10.2.1	Crystallinity – Role of Structural Order	328

10.2.2	Grain Boundaries	329
10.2.3	Single Crystals – Model Systems to Study Intrinsic Properties of Organic Semiconductors	331
10.3	Structure–Processing–Properties Relationship in Small-Molecule Organic Thin-Film Transistors	331
10.3.1	Microstructure and Mobility	331
10.3.2	Controlling Film Morphology by Surface Chemical Modifications	334
10.3.3	Processing Parameters Affecting Electrical Properties	337
10.3.3.1	Deposition Method	337
10.3.3.2	Solvent	338
10.4	Advanced Film Processing	340
10.4.1	How Sensibility to Processing Details Can Be Advantageous	340
10.4.2	Solvent Annealing	341
10.4.3	Deposition under Solvent Vapors	342
10.4.4	Patterning Organic Thin-Film Transistors	344
10.5	Summary	348
	References	348

### **Part III Applications** 353

<b>11</b>	<b>Light-Emitting Organic Transistors</b>	<b>355</b>
	<i>Jana Zaumseil</i>	
11.1	Introduction	355
11.2	Unipolar Light-Emitting FETs	357
11.3	Ambipolar Light-Emitting FETs	360
11.3.1	Ambipolar Device Characteristics	360
11.3.2	Ambipolar Blends with Bulk Heterojunctions	362
11.3.3	Double Layers and Lateral Heterojunctions	363
11.3.4	Single Semiconductor Ambipolar FETs	365
11.3.4.1	Intrinsic Ambipolar Transport in Organic Semiconductors	366
11.3.4.2	Ambipolar FETs with Asymmetric Electrodes	367
11.3.4.3	Ambipolar FETs with Narrow Bandgap Semiconductors	368
11.3.4.4	Ambipolar FETs with Bottom Contact/Top Gate Electrodes	368
11.3.5	Device Modeling	375
11.3.6	Toward Electrically Pumped Organic Lasers	377
11.4	Other Field-Effect-Based Light-Emitting Devices	380
11.4.1	Vertical Light-Emitting Transistors	380
11.4.2	Field-Effect Enhanced LEDs	381
11.5	Conclusions	383
	Acknowledgments	383
	References	383

<b>12</b>	<b>Design Methodologies for Organic RFID Tags and Sensor Readout on Foil</b>	<b>387</b>
	<i>Kris Myny, Hagen Marien, Soeren Steudel, Peter Vicca, Monique J. Beenhakkers, Nick A.J.M. van Aerle, Gerwin H. Gelinck, Jan Genoe, Wim Dehaene, Michiel Steyaert, Paul Heremans, and Eugenio Cantatore</i>	
12.1	Introduction	387
12.2	Organic RFID Tags	388
12.2.1	Capacitively Coupled RFID Tags	389
12.2.2	Inductively Coupled RFID Tags	390
12.2.2.1	Transponder Chip	391
12.2.2.2	Integrated RFID Transponder	393
12.3	Transistor-Level Design with Organic Transistors	397
12.3.1	Design Considerations for Digital Organic Circuits	397
12.3.1.1	Unipolar Logic	398
12.3.1.2	Complementary Logic	399
12.3.1.3	Dual- $V_T$ Logic	400
12.3.2	Design Considerations for Analog and Mixed-Signal Organic Circuits	401
12.3.2.1	Technology Challenges	402
12.3.2.2	Circuit Design Techniques for Analog Building Blocks	403
12.3.2.3	Design of a Sigma-Delta Analog-to-Digital Converter	407
12.4	Conclusions	407
