

Contents

Preface *xix*

List of Contributors *xxi*

1	Deciphering DNA Sequence Information	1
	<i>Mark Kaganovich and Michael Snyder</i>	
1.1	Introduction	1
1.2	Genes and Transcribed Regions	1
1.2.1	Open Reading Frames	2
1.2.2	Mapping Transcriptional Start Sites	2
1.2.3	Mapping Untranslated Regions on mRNA	3
1.3	Non-Coding Genomic Elements	4
1.3.1	Pseudogenes	4
1.3.2	Repeats	5
1.3.3	Structural Variants	6
1.3.4	Methods for SV Detection	6
1.3.5	Transposons and Retrotransposons	9
1.4	Regulatory Information	10
1.4.1	Classes of Regulatory Elements	10
1.4.2	Transcription Factor Binding Motifs	12
1.4.3	Allele-Specific Expression	14
1.5	Individual Genetic Polymorphisms and Their Effect on Gene Expression	16
1.6	Conclusion	16
2	DNA Methylation	21
	<i>Carina Frauer, Fabio Spada, and Heinrich Leonhardt</i>	
2.1	Introduction	21
2.1.1	Discovery of 5-Methylcytosine in DNA	21
2.1.2	Epigenetic Control of Gene Expression	22

2.2	Eukaryotic DNA Methyltransferases	24
2.2.1	Dnmt1	25
2.2.2	The Dnmt3 Family	26
2.2.3	Cooperative Function of Dnmts	27
2.3	Distribution of 5-Methylcytosine in the Mammalian Genome	27
2.3.1	Spatial Distribution of 5-Methylcytosine	27
2.3.2	CpG Islands and Promoter Regulation	29
2.3.3	Repetitive DNA Sequences	30
2.3.4	Temporal Distribution of 5-Methylcytosine	31
2.4	Control of Gene Expression by DNA Methylation	31
2.4.1	Loss of Transcription Factor Binding	32
2.4.2	Methyl-CpG Binding Proteins	32
2.4.3	Interconnection of DNA Methylation with Other Epigenetic Pathways	35
2.4.4	DNA Methylation, Higher Order Chromatin Structure, and Nuclear Architecture	36
2.5	DNA Demethylation	37

3 Nucleosomes as Control Elements for Accessing the Genome

Mekonnen Lemma Dechassa and Karolin Luger

3.1	Introduction and Basic Terminology	55
3.2	Nucleosomes are the Building Blocks of Chromatin	56
3.2.1	Histones	56
3.2.2	Protein DNA Interactions in the Nucleosome	60
3.2.3	The Structure of Nucleosomal DNA	61
3.3	Nucleosomes Are Dynamic Macromolecular Assemblies	63
3.3.1	Mechanisms to Promote Histone Exchange In Vivo	63
3.3.2	In Vitro Determination of Nucleosome Stability	64
3.4	Histone Variants and Their Effect on Nucleosome Structure and Dynamics	66
3.4.1	Variant Nucleosome Structures	67
3.5	Histone Modifications in Nucleosome and Chromatin Structure	68
3.6	DNA Sequence and Nucleosome Positioning	70
3.6.1	Mechanisms for Nucleosome Exclusion	70
3.6.2	Features that Promote Nucleosome Formation	71
3.7	Histone Chaperones and Chromatin Dynamics	73
3.7.1	Transcription	73
3.7.2	DNA Replication	74
3.7.3	DNA Repair	74

3.7.4	Mechanism of Chaperone-Mediated Nucleosome Assembly and Disassembly	75
3.8	Outlook and Concluding Remarks	75
4	Histone Modifications and Their Role as Epigenetic Marks	89
	<i>Karl Nightingale</i>	
4.1	The Complexity of Histone Modifications	89
4.2	Regulating Histone Modifications in Chromatin	93
4.3	The “Histone Code” Hypothesis	95
4.3.1	Defining Histone “Marks.” Why Is Histone Modification so Complex?	96
4.3.2	Recognizing Histone Modifications: “Reader” Domains	97
4.4	Exploiting the Complexity of the Histone Code: “Crosstalk” Between Different Modifications	98
4.4.1	Histone “Crosstalk”: Increased Code Complexity and Signal Integration	99
4.4.2	Histone Crosstalk: Sequential Processes on Chromatin	101
4.5	Are Histone Modifications Heritable Epigenetic Marks?	104
4.6	Conclusions	106
5	Chromatin Remodeling and Nucleosome Positioning	111
	<i>Gernot Längst, Vladimir B. Teif, and Karsten Rippe</i>	
5.1	Introduction	111
5.2	Chromatin Remodeling Complexes	112
5.2.1	ATPase Families	112
5.2.2	Accessory Subunits of Chromatin Remodeling Complexes	113
5.2.3	Activities of Chromatin Remodeling Factors	114
5.3	Mechanisms of Nucleosome Translocations	115
5.3.1	The Loop–Recapture Mechanism for Nucleosome Translocation	115
5.3.2	Mechanisms for Targeting Nucleosomes to Certain Site	116
5.4	Positioning Nucleosomes in the Genome	118
5.4.1	DNA Sequence-Dependent Binding Affinities of the Histone Octamer	118
5.4.2	Genome-Wide Analysis of Nucleosome Positions	119
5.4.3	Nucleosome Positions at Promoters and Enhancers	120
5.4.4	Prediction of Nucleosome Positions from the DNA Sequence	121
5.4.5	Effects of Chromatin Remodelers on Nucleosome Positioning	122
5.5	Gene Regulation via Nucleosome Positioning	124
5.5.1	Competitive Binding of Transcription Factors and Nucleosomes	124
5.5.2	Remodeler and Nucleosomes as Molecular Switches	127
5.6	Conclusions	127

6	The Folding of the Nucleosome Chain	139
	<i>Karsten Rippe</i>	
6.1	Introduction	139
6.2	Experimental Systems	140
6.2.1	Native Chromatin Fragments	140
6.2.2	Reconstituted Nucleosome Chains	142
6.3	Nucleosome–Nucleosome Interactions	142
6.3.1	The Strength of Nucleosome–Nucleosome Interactions	143
6.3.2	Interactions of the Globular Part of the Histone Octamer Core	144
6.3.3	Contributions of Histone Tails to Nucleosome–Nucleosome Interactions	145
6.4	DNA Interactions with the Histone Octamer Protein Core	145
6.5	Architectural Chromosomal Proteins and Chromatin States	147
6.5.1	Linker Histones	148
6.5.2	Other Architectural Chromosomal Proteins	148
6.5.3	Chromatin States	149
6.6	Chromatin Fiber Conformations	150
6.6.1	Solenoid Chromatin Fiber Models	151
6.6.2	Chromatin Fibers with Crossed Linker DNA	153
6.7	Conclusions	154
7	The Crowded Environment of the Genome	169
	<i>Ron Hancock</i>	
7.1	Introduction	169
7.2	Basics	169
7.2.1	Macromolecular Crowding	169
7.2.2	Depletion or Entropic Forces	170
7.2.3	Phase Separation	170
7.3	Physicochemical Parameters of the Genome's Environment	171
7.3.1	The Ionic Environment(s)	171
7.3.2	The Macromolecular Environment	171
7.4	Implications of a Crowded Environment for the Conformation of the Interphase Genome	171
7.4.1	Chromosomes as Polyelectrolyte Polymers	171
7.4.2	Formation of Loops in Polynucleosome Chains	174
7.4.3	Chromosomes and the Interchromatin Compartment Viewed as Separate Phases	174
7.5	Assembly and Localization of Macromolecular Machines for Genome Transcription and Replication	175
7.5.1	Entropic Forces in the Assembly of Transcription Factories	175
7.5.2	Localization of Transcription and Replication Factories on the Surface of Chromosome Territories	176

7.6	The Environment of the Genome during Mitosis	177
7.7	Effects of a Crowded Environment on Searching for Targets in the Genome	178
7.7.1	The Advantage of Anomalous Diffusion	178
7.7.2	Finding Targets in the Genome	179
7.8	The Relative Importance of Entropic and Ionic Interactions for the Conformations and Interactions of Macromolecules in the Nucleus	179
7.9	The Evolution of Genomes	180
8	The Nuclear Lamina as a Chromatin Organizer	185
	<i>Nikolaj Zuleger and Eric C. Schirmer</i>	
8.1	Introduction	185
8.2	Genome Organization with Respect to the Nuclear Periphery	187
8.2.1	Chromosome and Gene Positioning	187
8.2.2	Epigenetic Marks	189
8.2.3	A Distinct Microenvironment at the NPC	190
8.3	Interactions between NE Proteins and Chromatin Proteins/Chromatin Regulatory Proteins	190
8.3.1	Interactions with Chromatin and DNA	191
8.3.2	Epigenetically Marked Chromatin Interactions	192
8.3.3	Chromatin-Modifying Enzymes	192
8.4	Mechanisms Directing Changes in Genome Organization during Development	193
8.4.1	Dynamic Changes in Genome Organization in Development	193
8.4.2	An Affinity Mechanism for Directing Genes to the Periphery	194
8.4.3	Correlations between Gene Movement and Repression/Activation	197
8.5	Gene Regulation as a Consequence of Peripheral Positioning	198
8.5.1	General Silencing from the Peripheral Environment	199
8.5.2	Directed Gene Silencing from NE Proteins	199
8.5.3	Gene Activation from the NE	200
8.6	Peripheral Chromatin Organization and Disease	201
8.6.1	NE-Linked Diseases	201
8.6.2	Changes in Heterochromatin Organization in Disease	202
8.7	Closing Remarks	203
9	Three-Dimensional Architecture of Genomes	211
	<i>Job Dekker</i>	
9.1	Introduction	211
9.2	3C-Based Methods to Study Chromosome Architecture	213
9.2.1	Chromosome Conformation Capture	213

9.2.2	4C: 3C on Chip, or Circular 3C	214
9.2.3	5C: 3C Carbon Copy	215
9.2.4	Chip-loop and Chia-PET	215
9.2.5	Hi-C	216
9.2.6	Comparison of 3C-Based Methods, Strengths, and Weaknesses	217
9.3	Chromosome Architecture as Seen by 3C-Based Assays	218
9.3.1	Formation of Chromatin Loops	218
9.3.1.1	<i>Cis</i> Interactions: Chromatin Loops in the Beta-Globin Locus	219
9.3.1.2	<i>Trans</i> Interactions: Associations Between the X Chromosome Inactivation Centers	222
9.3.2	Gene Associations <i>in Cis</i> and <i>in Trans</i>	223
9.3.3	Chromosome Compartmentalization	223
9.3.4	Chromosome Territories and Nuclear Organization	224
9.3.5	Polymer Aspects of Chromosome Architecture	225
9.4	3C-Based Data and Single Cell Observations	226
9.5	Towards an Integrated 3C-Based View of Genome Architecture	227

10 Transcriptional Initiation: Frequency, Bursting, and Transcription Factories 235

Kieran Finan and Peter R. Cook

10.1	Transcription in Mammalian Nuclei	235
10.1.1	General Introduction	235
10.2	Transcription Is an Infrequent Event	236
10.3	Transcription Is Noisy	238
10.3.1	Extrinsic and Intrinsic Noise	239
10.3.2	Studies of Noise Suggest Transcription Occurs in “Bursts”	240
10.3.3	Visualizing Bursts of Transcription in Real Time	243
10.4	What Causes “Bursting”?	245
10.4.1	How Long Does a Burst Last?	245
10.4.2	Typical Transcription Factors Do Not Bind Long Enough to Account for Bursting	246
10.4.3	Effects of Chromatin Remodeling and Histone Modifications on Transcription Bursts	247
10.4.4	Transcription Factories	247
10.5	Conclusion	250

11 Processing of mRNA and Quality Control 255

Ute Schmidt and Edouard Bertrand

11.1	Introduction	255
11.2	Biosynthesis of Messenger RNA	255
11.2.1	Capping, 3' End Formation and Polyadenylation	255
11.2.2	Pre-MessengerRNA Splicing	257
11.2.3	The Exon Junction Complex	261

11.2.4	Nuclear Export of mRNA	262
11.2.5	mRNA Degradation Pathways	264
11.3	Nuclear Quality Control	265
11.3.1	Retention of Unspliced Pre-mRNAs at the Nuclear Periphery in Yeast	265
11.3.2	Retention of mRNAs Near Their Site of Transcription in Yeast	266
11.3.3	Retention of mRNAs at Their Transcription Site in Mammalian Cells	267
11.3.4	Nucleoplasmic Retention of mRNAs in Mammalian Cells	267
11.4	Cytoplasmic Messenger RNA Quality Control: Nonsense-Mediated Decay, No-Go and Non-Stop Decay	268
11.4.1	Cytoplasmic Processing Bodies	268
11.4.2	Nonsense-Mediated Decay	270
11.4.2.1	Recognition of Premature Stop Codons	270
11.4.2.2	The Pioneering Round of Translation	271
11.4.2.3	Mechanism of NMD in Mammalian Cells	271
11.4.3	No-Go Decay and Non-Stop Decay	272
11.5	Concluding Remarks	273

12 The Nucleolus 279

Saskia Hutten, Belinda J. Westman, François-Michel Boisvert, Silvana van Koningsbruggen, and Angus I. Lamond

12.1	Introduction	279
12.2	The Nucleolus and Its DNA	280
12.2.1	Nucleolar Organizer Regions (NORs)	280
12.2.2	Transcription of rDNA	282
12.2.2.1	Transcription Initiation	282
12.2.2.2	Transcription and Chromatin	282
12.2.3	Epigenetic Mechanisms at the rDNA Locus	283
12.2.3.1	Key Players in the Epigenetic Regulation of the rDNA Locus	283
12.2.3.2	Integration of Extracellular Signals at the rDNA Locus	284
12.2.4	Additional Implications of Chromatin in the Nucleolus	285
12.3	The Nucleolus and RNPs: Temporary Visitors or Permanent Residents?	285
12.3.1	The Nucleolus as a Platform for RNP Assembly	286
12.3.1.1	The Ribosome	286
12.3.1.2	Signal Recognition Particle	288
12.3.1.3	Telomerase	288
12.3.1.4	U6 Small Nuclear RNP	288
12.3.1.5	mRNA-Containing RNPs	289
12.3.1.6	MicroRNA-Containing RNPs	289
12.3.2	RNP Function in the Nucleolus	290
12.3.2.1	Small Nucleolar RNPs	290

12.3.2.2	RNase MRP and RNase P	291
12.3.3	The Nucleolus as a Quality Control Centre	291
12.4	The Nucleolar Proteome	292
12.4.1	Dynamic Dimensions of the Nucleolar Proteome	292
12.4.1.1	The Nucleolus Affects Cell Cycle and Cell Fate	293
12.4.2	The Nucleolus as a Stress Sensor	294
12.5	Concluding Remarks	295

13 Non-Coding RNAs as Regulators of Transcription and Genome Organization 309

Katalin Fejes Tóth and Gregory Hannon

13.1	Introduction	309
13.2	Classification of Non-Coding RNAs	311
13.3	Small Regulatory RNAs and Their Diverse Nuclear Functions	314
13.3.1	Heterochromatin Formation and Maintenance by siRNAs in Yeast and Plants	314
13.3.2	Targeting of Chromatin Signatures by Endogenous siRNAs and piRNAs in Animals	317
13.3.3	DNA Rearrangement/Elimination in Ciliates Involves Scanning RNAs	319
13.3.4	Transcriptional Repression Mediated by siRNAs and miRNAs	321
13.3.5	siRNA-Mediated Activation	322
13.3.6	Promoter- and Gene-Derived Transcripts in Yeast and Animals	323
13.4	ncRNAs in Dosage Compensation	324
13.5	Developmental Regulation of Hox Clusters by Cis- and Trans-Acting ncRNAs	328
13.5.1	The Act of Transcription Leads to Altered DNA Accessibility	328
13.5.2	Transcription Through Hox Gene Promoters Interferes with Their Expression	329
13.5.3	Non-Coding RNA Transcripts Bind Regulatory Factors	329
13.5.4	Non-Coding RNA Regulation in trans	329
13.6	Mechanisms of Transcriptional Regulation by Long ncRNAs	330
13.6.1	Transcriptional Read through Leading to Activation or Silencing	333
13.6.2	Non-Coding RNAs Directly Regulating Transcription and RNA Processing	334
13.6.3	RNA Processing	335
13.6.4	Regulation of Gene Expression via ncRNA-Induced Epigenetic Modifications	335
13.6.5	ncRNA Regulation through Changes of Large-Scale Chromatin Structure	337
13.7	Conclusions	338

14	RNA Networks as Digital Control Circuits of Nuclear Functions	353
	<i>John S. Mattick</i>	
14.1	Introduction	353
14.2	The Information Content of the Genome	353
14.3	The Hidden Layer of Developmentally Expressed Non-Coding RNAs	354
14.4	RNA Control of Nuclear Functions	355
14.5	RNA as the Adaptor in Digital–Analog Transactions	356
14.6	RNA as the Substrate for Environment–Epigenome Interactions	357
14.7	Conclusion	358
15	DNA Replication and Inheritance of Epigenetic States	365
	<i>Armelle Corpet and Geneviève Almouzni</i>	
15.1	Replication in a Chromatin Context: Basic Issues and Principles	365
15.2	Duplication of Nucleosome Organization	368
15.2.1	Temporal Coupling of Histone Synthesis with DNA Replication	368
15.2.2	De Novo Deposition of Histones	369
15.2.3	The Fate of Parental Nucleosomes during DNA Replication	371
15.2.4	Factors Involved in Disruption and Recycling of Parental Nucleosomes	372
15.3	Maintenance of Epigenetic Marks and Post-translational Modifications	375
15.3.1	New Histones Carry a Specific PTM Signature	375
15.3.2	Which Chromatin Marks Get Duplicated and Qualify as “Epigenetic”?	377
15.3.3	Inheritance of Histone Variants and PTMs Outside Replication? Anticipation or Restoration?	381
15.4	Concluding Remarks	383
16	Interplay and Quality Control of DNA Damage Repair Mechanisms	395
	<i>Berina Eppink, Jeroen Essers and Roland Kanaar</i>	
16.1	Introduction	395
16.2	DNA Repair Pathways	396
16.2.1	Base Excision Repair	396
16.2.2	Nucleotide Excision Repair	398
16.3	Repairing DSBs	400
16.3.1	Signaling the DSB	400
16.3.2	Non-Homologous End-Joining	401

16.3.3	Homologous Recombination	403
16.4	Repair during Replication	404
16.4.1	Mismatch Repair	404
16.4.2	HR Repair during Replication	406
16.4.3	Translesion DNA Synthesis	408
16.5	Interplay and Quality Control during DNA Damage Repair	409
16.6	Applications of Mechanistic Insight in DNA Repair in Anti-Cancer Treatment	410
17	Higher Order Chromatin Organization and Dynamics	417
	<i>Hilmar Strickfaden, Thomas Cremer, and Karsten Rippe</i>	
17.1	Introduction	417
17.2	Higher Order Chromatin Organization: From 10-nm Thick Nucleosome Chains to Chromosome Territories	418
17.3	Genome Accessibility	424
17.3.1	Chromatin Density Distributions and Accessibility of Nuclear Space	424
17.3.2	Mobility of Inert Molecules and Complexes on Different Scales	425
17.4	Mobility of Chromosomal Loci and Nuclear Bodies	426
17.4.1	Typical Mobilities of Genomic Loci	426
17.4.2	Mobility of Nuclear Bodies and Exchange of Protein Components with the Nucleoplasm	428
17.5	Mitosis Causes Drastic Changes of Chromosome Territory Proximity Patterns in Cycling Cells	429
17.6	Large-Scale Chromatin Dynamics in Nuclei of Cycling and Post-Mitotic Cells	431
17.7	Considerations on Possible Mechanisms of Large-Scale Chromatin Dynamics	434
18	The Mitotic Chromosome: Structure and Mechanics	449
	<i>John F. Marko</i>	
18.1	Introduction	449
18.2	Structural Components of Mitotic Chromosomes	450
18.2.1	Chromatin Fiber	451
18.2.2	Condensin Structural Maintenance of Chromosome (SMC) Complexes	453
18.2.3	Cohesin SMC Complexes	454
18.2.4	Topoisomerase II	455
18.2.5	Other Chromosomal Proteins	456
18.3	Large-Scale Organization of Mitotic Chromosomes	457
18.4	Mechanics of Mitotic Chromosomes	459
18.4.1	Chromosome-Stretching Experiments	459
18.4.2	Mitotic Chromosome Stretching Elasticity	460

18.4.3	Mitotic Chromosome Bending Stiffness	463
18.4.4	Reversible Folding and Unfolding of Mitotic Chromosomes by Salt	464
18.5	Molecular Connectivity of Mitotic Chromosomes	465
18.5.1	Nucleases Disintegrate Mitotic Chromosomes	465
18.5.2	Proteases Gradually Expand but Do Not Cleave Chromosomes	466
18.5.3	DNA Topology: Entanglement and Supercoiling of Chromatin in Mitotic Chromosomes	466
18.5.4	Interchromosome Linkers	467
18.6	A Model for Mitotic Chromosome Structure and Function	468
18.6.1	Mitotic Chromosomes are Chromatin Networks	468
18.6.2	What Are the Crosslinking Elements?	468
18.6.3	SMC-Crosslinked Chromatin Network Model of Mitotic Chromosome Condensation	469
18.6.4	Lengthwise Condensation and Chromosome Segregation	472
18.6.5	Stretching and Bending Elasticity	472
18.6.6	Effects of Cutting and Removing Molecules	473
18.7	Open Questions	474

19 Meiotic Chromosome Dynamics 487

Nancy Kleckner, Liangran Zhang, Beth Weiner, and Denise Zickler

19.1	Introduction	487
19.1.1	Meiosis versus Mitosis	487
19.1.2	Segregation via Tension-Mediated Sensing of Connectedness	487
19.1.3	Modulation of Sister Connectedness during the Meiotic Divisions	489
19.1.4	Aberrant Meiotic Chromosome Segregation Produces Aneuploid Gametes	490
19.1.5	The Classical Stages of Meiosis Set the Stage for Two Divisions	490
19.2	Recombination at the DNA Level	494
19.2.1	Initiation	494
19.2.2	Completion	495
19.2.3	Modulation of Meiotic Recombination	497
19.2.4	Temporal Coordination of Recombination with Basic Meiotic Stages	499
19.3	Coordination between Recombination and Chromosome Dynamics	500
19.3.1	Organization of Meiotic Chromosomes	500
19.3.1.1	Organization and Structure as Revealed by EM of Pachytene Chromosomes	500
19.3.1.2	Molecular Composition of Axes and the SC	501
19.3.1.3	Development of Axial Organization and Installation of SC	502
19.3.1.4	Chromatin Structure and Chromatin/Axis Interplay	503
19.3.2	Recombinosome–Axis Association and Functional Interplay	504

19.3.2.1	Tethered-Loop Axis Complexes	504
19.3.2.2	Development and Progression of Recombinosome/Axis Association	504
19.3.2.3	Possible Roles	505
19.4	Homologous Chromosome Pairing	507
19.4.1	Recombination-Mediated Axis Juxtaposition of Elongated Chromosomes via Multiple Interactions	507
19.4.1.1	A DSB Must Faithfully Identify and Interact with a Homologous Partner Sequence	508
19.4.1.2	Finding a Partner in Space: A Long-Range Proposition?	508
19.4.1.3	Recombinosome-Mediated Axis Juxtaposition	509
19.4.1.4	Higher Order Features	510
19.4.2	Recombination-Independent Pairing	512
19.4.2.1	How Is Homology Recognized without Recombination Proteins?	512
19.4.2.2	Further Insights into Higher Order Features of Pairing	513
19.4.2.3	Combinations and Evolution of Pairing Mechanisms	515
19.5	Meiotic Recombination as a Paradigm for Spatial Patterning along Chromosomes	515
19.5.1	Crossover/Chiasma Patterning	516
19.5.2	Other types of Chromosomal Events also Tend to Be Evenly Spaced	516
19.5.3	Basic Logic of Crossover/Chiasma Patterning	518
19.5.4	Models and Mechanisms	519
19.5.4.1	Stress and Stress Relief?	519
19.5.4.2	Molecular Basis for Nucleation and Spreading	520
19.5.4.3	Mathematical Descriptions of Interference and Even Spacing	522
19.5.4.4	Crossover Interference: the Future	523

20 Understanding Genome Function: Quantitative Modeling of Chromatin Folding and Chromatin-Associated Processes 535

Mariliis Tark-Dame, Martijn S. Luijsterburg, Dieter W. Heermann and Roel van Driel

20.1	Modeling of Genome Functioning	535
20.2	Large-Scale Chromatin Folding	536
20.2.1	Chromatin Looping	536
20.2.1.1	Proteins Involved in Chromatin Looping	537
20.2.1.2	Transcription Factories	538
20.2.2	Modeling of Chromatin Folding	538
20.2.2.1	Initial Models	539
20.2.2.2	Introducing Chromosome Looping	539
20.2.2.3	Chromosome Territories	541
20.2.3	Conclusions	542

20.3	Assembly of Chromatin-Associated Multiprotein Complexes	543
20.3.1	Introduction	543
20.3.2	Key Questions	544
20.3.3	Assembly of Chromatin-Associated Multiprotein Complexes	544
20.3.3.1	Identification of the Genomic Target Site	544
20.3.3.2	Assembly of a Multiprotein Chromatin-Associated Protein Complex	546
20.3.4	Conclusion	548
20.4	Outlook	548
	Index	557
