

## Contents

Preface XIII

Index of Frequently Used Abbreviations XV

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	The Beginnings of Catalytic Research	1
1.1.1	Homogeneously Catalyzed Reactions	1
1.1.2	Heterogeneously Catalyzed Reactions	3
1.2	The Catalysis Definitions of Berzelius and Ostwald	5
1.2.1	Berzelius' Catalysis Concept	5
1.2.2	Ostwald's Definition of Catalysis	6
<b>2</b>	<b>Principles of Organometallic Catalysis</b>	<b>9</b>
2.1	Homogeneous versus Heterogeneous Catalysis	9
2.2	Catalytic Cycles	11
2.3	Activity and Productivity of Catalysts	12
2.3.1	Catalytic Activity	12
2.3.2	Catalytic Productivity	12
2.3.3	Conversion-Time Plots	13
2.4	Selectivity and Specificity of Catalysts	14
2.5	Determination of Catalytic Mechanisms	15
2.5.1	Experimental Studies	16
2.5.2	Theoretical Studies	17
2.6	Glossary for Catalysis	18
2.7	The Development of Organometallic Catalysis	21
<b>3</b>	<b>Elementary Steps in Organometallic Catalysis</b>	<b>27</b>
3.1	Cleavage and Coordination of Ligands	27
3.2	Oxidative Addition and Reductive Elimination	30
3.3	Oxidative Coupling and Reductive Cleavage	35
3.4	Olefin Insertion and $\beta$ -Hydrogen Elimination	37

3.5	$\alpha$ -Hydrogen Elimination and Carbene Insertion Reactions	40
3.6	Addition of Nucleophiles and Heterolytic Fragmentation	42
3.7	Insertion and Extrusion of CO	45
3.8	One-Electron Reduction and Oxidation	46
<b>4</b>	<b>Hydrogenation of Olefins</b>	<b>49</b>
4.1	Introduction	49
4.2	The Wilkinson Catalyst	50
4.2.1	Principles	50
4.2.2	Mechanism of Olefin Hydrogenation	51
4.3	Enantioselective Hydrogenation	54
4.3.1	Principles	54
4.3.2	Applications and Examples	58
4.3.2.1	Applications for Asymmetric Hydrogenation	58
4.3.2.2	Combinatorial Catalysis	59
4.3.2.3	Nonlinear Effects	61
4.3.3	Kinetically Controlled Enantioselectivity — A Closer Look	63
4.4	Dihydrogen Complexes and H <sub>2</sub> Activation	68
4.4.1	Dihydrogen Complexes	68
4.4.2	Activation of Dihydrogen	71
4.5	Transfer Hydrogenation	73
<b>5</b>	<b>Hydroformylation of Olefins and Fischer-Tropsch Synthesis</b>	<b>77</b>
5.1	Cobalt Catalysts	77
5.2	Phosphane-Modified Rhodium Catalysts	80
5.3	Enantioselective Hydroformylation	84
5.4	Significance of Hydroformylation and Outlook	88
5.4.1	Diphosphites as Ligands	89
5.4.2	Biphasic Catalysis	91
5.4.3	Synthesis of Vitamin A	93
5.4.4	Carbon Dioxide as Alternative to CO	93
5.4.5	Combinatorial and Supramolecular Catalysis	94
5.5	The Fischer-Tropsch Synthesis	95
5.5.1	Mechanism	97
<b>6</b>	<b>Carbonylation of Methanol and Water-Gas Shift Reaction</b>	<b>101</b>
6.1	Principles	101
6.2	The Monsanto Process	103
6.3	Synthesis of Acetic Anhydride	106
6.4	The Cativa Process	108
6.5	Water-Gas Shift Reaction and Carbon Monoxide Dehydrogenases	112
6.5.1	Water-Gas Shift Reaction	112
6.5.2	Carbon Monoxide Dehydrogenases	114

<b>7</b>	<b>Metathesis</b>	<b>117</b>
7.1	Metathesis of Olefins	117
7.1.1	Introduction	117
7.1.2	Mechanism	118
7.1.3	Catalysts	119
7.1.4	Mechanism – A Closer Look	123
7.1.5	Metathesis of Cycloalkenes	125
7.1.6	Metathesis of Acyclic Dienes	128
7.1.7	Enantioselective Metathesis	130
7.2	Metathesis of Alkynes	131
7.3	Enyne Metathesis	133
7.4	$\sigma$ -Bond Metathesis	135
7.5	Metathesis of Alkanes	137
7.5.1	Principles	137
7.5.2	Mechanism	138
7.5.3	Alkane Metathesis Via Tandem Reactions	141
<b>8</b>	<b>Oligomerization of Olefins</b>	<b>145</b>
8.1	Ziegler Growth Reaction	145
8.2	Nickel Effect and Nickel-Catalyzed Dimerization of Ethene	147
8.3	Trimerization of Ethene	152
8.4	Shell Higher Olefin and $\alpha$ -Sablin Processes	156
8.4.1	The Shell Higher Olefin Process (SHOP)	156
8.4.2	$\alpha$ -Sablin Process	158
8.4.3	Use of Linear $\alpha$ -Olefins	159
<b>9</b>	<b>Polymerization of Olefins</b>	<b>161</b>
9.1	Introduction	161
9.2	Ethene Polymerization	162
9.2.1	Ziegler Catalysts	162
9.2.2	Mechanism – A Closer Look	165
9.2.3	Phillips Catalysts	167
9.2.4	Polymer Types and Process Specifications	169
9.3	Propene Polymerization	171
9.3.1	Regioselectivity and Stereoselectivity	171
9.3.2	Ziegler-Natta Catalysts	175
9.3.3	Polymer Types and Process Specifications	178
9.4	Metallocene Catalysts	179
9.4.1	Cocatalysts and Anion Influence	179
9.4.2	$C_2$ - and $C_s$ -Symmetric Metallocene Catalysts	182
9.4.2.1	Principles	182
9.4.2.2	Mechanism	184
9.4.3	Metallocene Catalysts with Diastereotopic Coordination Pockets	187

9.4.3.1	Principles	187
9.4.3.2	Hemitactic Polymers	190
9.4.3.3	Stereoblock Polymers	191
9.4.4	On the Significance of Metallocene Catalysts	191
9.5	Nonmetallocene Catalysts	193
9.5.1	Catalyst Systems of Early Transition Metals	194
9.5.2	Catalyst Systems of Late Transition Metals	194
9.5.3	Living Polymerization of Olefins and Block Copolymers	198
9.6	Copolymerization of Olefins and CO	200
9.6.1	Perfectly Alternating Copolymerization	200
9.6.2	Imperfectly Alternating Copolymerization	204
<b>10</b>	<b>C–C Linkage of Dienes</b>	<b>207</b>
10.1	Introduction	207
10.2	Allyl and Butadiene Complexes	208
10.2.1	Allyl Complexes	208
10.2.2	Butadiene Complexes	211
10.2.3	<i>Re/Si</i> and <i>supine/prone</i> Coordination of Allyl and Butadiene Ligands	213
10.3	Organometallic Elementary Steps of Allyl Ligands	214
10.3.1	Oxidative Coupling and Reductive Cleavage	214
10.3.2	Butadiene Insertion and $\beta$ -Hydrogen Elimination	215
10.3.3	Allyl Insertion	215
10.3.4	Oxidative Addition and Reductive Elimination	216
10.3.5	<i>anti/cis</i> and <i>syn/trans</i> Correlations	218
10.4	Oligomerization and Telomerization of Butadiene	218
10.4.1	Cyclotrimerization of Butadiene	218
10.4.1.1	Mechanism	218
10.4.1.2	<i>cis/trans</i> Selectivity – A Closer Look	221
10.4.1.3	Industrial Synthesis of CDT	224
10.4.2	Cyclodimerization of Butadiene	224
10.4.2.1	Mechanism	224
10.4.2.2	Selectivity Control	226
10.4.3	Linear Oligomerization and Telomerization of Butadiene	230
10.5	Polymerization of Butadiene	234
10.5.1	Mechanism	234
10.5.2	Butadiene Polymerization Catalyzed by Allylnickel(II) Complexes	237
10.5.3	Synthesis and Properties of Polybutadienes and Polyisoprenes	241
<b>11</b>	<b>C–C Coupling Reactions</b>	<b>245</b>
11.1	Palladium-Catalyzed Cross-Coupling Reactions	245
11.1.1	Introduction	245
11.1.2	Mechanism of Cross-Coupling Reactions	246

- 11.1.3 Selected Types of Cross-Coupling 249
  - 11.1.3.1 Cross-Coupling with Organolithium, Organomagnesium, and Organozinc Reagents 249
  - 11.1.3.2 Suzuki Coupling 250
  - 11.1.3.3 Hiyama Coupling 251
  - 11.1.3.4 Stille Coupling 252
  - 11.1.3.5 Sonogashira Coupling 253
  - 11.1.3.6 Ligand Effects 254
  - 11.1.3.7 Alkyl–Alkyl Coupling 255
  - 11.1.3.8 Enantioselective Cross-Coupling 256
  - 11.1.3.9 Carbonylative Cross-Coupling 258
- 11.2 The Heck Reaction 258
  - 11.2.1 Mechanism of Heck Reactions 259
  - 11.2.2 Mechanism – A Closer Look 260
  - 11.2.3 Ligand Effects 261
  - 11.2.4 Enantioselective Heck Reactions 263
- 11.3 Palladium-Catalyzed Allylic Alkylation 264
  - 11.3.1 Principles and Mechanism 264
  - 11.3.2 Chirality Transfer in Asymmetric Allylation 267

## 12 Hydrocyanation, Hydrosilylation, and Hydroamination of Olefins 271

- 12.1 Introduction 271
- 12.2 Hydrocyanation 272
  - 12.2.1 Principles and Mechanism 272
    - 12.2.1.1 Mechanism – A Closer Look 273
    - 12.2.2 The DuPont Adiponitrile Process 274
    - 12.2.3 Outlook 276
      - 12.2.3.1 Enantioselective Hydrocyanation 276
      - 12.2.3.2 Hydrocyanation of Alkynes 277
      - 12.2.3.3 Hydrocyanation of Polar C=X Bonds 278
  - 12.3 Hydrosilylation 279
    - 12.3.1 Principles and Mechanism 279
    - 12.3.2 Significance of Hydrosilylation and Outlook 283
      - 12.3.2.1 Applications 283
      - 12.3.2.2 Enantioselective Hydrosilylation 284
      - 12.3.2.3 Hydrosilylation of Alkynes 285
      - 12.3.2.4  $\sigma$  Complexes of Silanes 286
    - 12.4 Hydroamination 287
      - 12.4.1 Principles 287
      - 12.4.2 Catalyst Types 289
        - 12.4.2.1 Alkali Metal Amides as Catalysts 289
        - 12.4.2.2 Platinum Group Metals as Catalysts 289
        - 12.4.2.3 Gold Complexes as Catalysts 291
        - 12.4.2.4 Lanthanoid Complexes as Catalysts 292

<b>13</b>	<b>Oxidation of Olefins and Alkanes</b>	<b>295</b>
13.1	The Wacker Process	295
13.1.1	Introduction	295
13.1.2	Mechanism of Ethene Oxidation	297
13.1.3	Oxypalladation of Olefins	303
13.1.3.1	Types of Oxypalladation	303
13.1.3.2	Enantioselective Oxypalladation	305
13.1.3.3	Palladium Oxidase Catalysis	305
13.2	Epoxidation of Olefins	306
13.2.1	Introduction	306
13.2.2	Epoxidation of Ethene and Propene	307
13.2.2.1	O <sub>2</sub> and ROOH as Oxygen Transfer Agents	307
13.2.2.2	Mechanism	309
13.2.2.3	H <sub>2</sub> O <sub>2</sub> as Oxygen Transfer Agent	311
13.2.3	Enantioselective Oxidation of Olefins	313
13.2.3.1	Epoxidation of Allyl Alcohols	313
13.2.3.2	Epoxidation of Nonactivated Olefins	314
13.2.4	Monoxygenases	315
13.3	C–H Functionalization of Alkanes	319
13.3.1	Introduction	319
13.3.2	C–H Activation of Alkanes	319
13.3.2.1	Cyclometallation and Orthometallation	319
13.3.2.2	Intermolecular C–H Activation of Alkanes	321
13.3.3	C–H Functionalization	323
13.3.3.1	The Shilov Catalyst System	324
13.3.3.2	The Catalytica System – Hg <sup>II</sup> as Catalyst	325
13.3.3.3	The Catalytica System – Pt <sup>II</sup> as Catalyst	326
13.3.3.4	Cytochrome P-450	326
<b>14</b>	<b>Nitrogen Fixation</b>	<b>329</b>
14.1	Fundamentals	329
14.2	Heterogeneously Catalyzed Nitrogen Fixation	334
14.2.1	Principles	334
14.2.2	Mechanism of Catalysis	335
14.2.3	The Industrial Catalyst	338
14.2.4	Ruthenium Catalysts	340
14.3	Enzyme-Catalyzed Nitrogen Fixation	342
14.3.1	The Fe Protein Cycle	343
14.3.2	The MoFe Protein Cycle	344
14.3.3	A Prebiotic Nitrogen-Fixing System?	347
14.4	Homogeneously Catalyzed Nitrogen Fixation	348
14.4.1	Stoichiometric Reduction of N <sub>2</sub> Complexes	348
14.4.2	Catalytic Reduction of Dinitrogen	352
14.4.3	Functionalization of Dinitrogen	359
