Preface *XIII*

List of Quantities and Units *XV*

Introduction	Calorimetry: Definition, Application Fields and Units	1
	Definition of Calorimetry	1
	Application Fields for Calorimetry	1
	First Example from Life Sciences	2
	Second Example from Material Science	2
	Third Example from Legal Metrology	2
	Units	3
	Further Reading	4
	References	5
Part One	Fundamentals of Calorimetry	7
1	Methods of Calorimetry	9
1.1	Compensation of the Thermal Effect	9
1.1.1	Compensation by a Phase Transition	9
1.1.2	Compensation by Electric Effects	12
1.2	Measurement of Temperature Differences	13
1.2.1	Measurement of Time-Dependent Temperature Differences	13
1.2.2	Measurement of Local Temperature Differences	15
1.2.2.1	First Example: Flow Calorimeter	15
1.2.2.2	Second Example: Heat Flow Rate Calorimeter	15
1.3	Summary of Measuring Principles	16
	References	17
2	Measuring Instruments	19
2.1	Measurement of Amount of Substance	19
2.1.1	Weighing	20
2.1.2	Volume Measurement	20

2.1.3	Pressure Measurement	21
2.1.4	Flow Measurement	21
2.2	Measurement of Electric Quantities	21
2.3	Measurement of Temperatures	22
2.3.1	Thermometers	23
2.3.1.1	Liquid-in-Glass Thermometers	23
2.3.1.2	Gas Thermometers	24
2.3.1.3	Vapor Pressure Thermometers	24
2.3.1.4	Resistance Thermometers	25
2.3.1.5	Semiconductors	26
2.3.1.6	Pyrometers	26
2.3.2	Thermocouples	27
2.4	Chemical Composition	29
	References	29
3	Fundamentals of Thermodynamics	31
3.1	States and Processes	31
3.1.1	Thermodynamic Variables (Functions of State)	31
3.1.2	Forms of Energy, Fundamental Form, and Thermodynamic Potential Function	34
3.1.2.1	Fundamental Form	35
3.1.2.2	Thermodynamic Potential Function	35
3.1.3	Equilibrium	38
3.1.4	Reversible and Irreversible Processes	41
3.1.5	The Laws of Thermodynamics	42
3.1.5.1	The Zeroth Law	42
3.1.5.2	The First Law	42
3.1.5.3	The Second Law	42
3.1.5.4	The Third Law	43
3.1.6	Measurement of Thermodynamic State Functions	43
3.2	Phases and Phase Transitions	47
3.2.1	Multiphase Systems	47
3.2.2	Phase Transitions	50
3.2.3	Gibbs Phase Rule	52
3.2.4	Measurement of Variables of State during Phase Transitions	56
	References	59
4	Heat Transport Phenomena	61
4.1	Heat Conduction	61
4.2	Convection	64
4.3	Heat Radiation	65
4.4	Heat Transfer	67
4.5	Entropy Increase during Heat Exchange	67
4.6	Conclusions Concerning Calorimetry	68
	References	71

5	Surroundings and Operating Conditions	73
5.1	The Isothermal Condition	74
5.2	The Isoperibol Condition	75
5.3	The Adiabatic Condition	75
5.4	The Scanning Condition	76
	Reference	79
6	Measurements and Evaluation	81
6.1	Consequences of Temperature Relaxation within the Sample	81
6.1.1	First Example: Chemical Reaction	81
6.1.2	Second Example: Biological System	82
6.1.3	Third Example: First-Order Phase Transitions	83
6.2	Typical Results from Different Calorimeters	86
6.2.1	Adiabatic Calorimeters	86
6.2.2	Isoperibol Calorimeters	89
6.2.3	Differential Scanning Calorimeters	93
6.3	Reconstruction of the True Sample Heat Flow Rate from the Measured Function	101
6.3.1	Reconstruction of the Temperature Field for Negative Times	101
6.3.2	The Convolution Integral and Its Validity	102
6.3.3	Solution of the Convolution Integral	105
6.3.4	Obtaining the Apparatus Function	106
6.3.5	Application Limits and Estimation of Uncertainty	107
6.4	Special Evaluations	109
6.4.1	Determination of the Specific Heat Capacity	109
6.4.2	Determination of the Kinetic Parameters of a Chemical Reaction	109
6.4.3	Determination of Phase Transition Temperatures	111
6.4.4	Determination of Heats of Transition	112
6.4.5	Determination of the Purity of a Substance	114
6.5	Determination of the Measurement Uncertainty	115
	References	121
Part Two	Practice of Calorimetry	123
7	Calorimeters	125
7.1	Functional Components and Accessories	125
7.2	Heating Methods	126
7.3	Cooling Methods	126
7.4	Comments on Control Systems	128
7.5	Thermostats	131
7.6	On the Classification of Calorimeters	131
7.7	On the Characterization of Calorimeters	132
7.8	Isothermal Calorimeters	134
7.8.1	Phase Transition Calorimeters	134

7.8.1.1	First Example: Ice Calorimeter	135
7.8.1.2	Second Example: Calorimeter with Liquid–Gas Phase Transition	137
7.8.2	Isothermal Calorimeters with Electrical Compensation	141
7.8.2.1	First Example: Calorimeter according to Tian	142
7.8.2.2	Second Example: Isothermal Titration Calorimeter	143
7.8.2.3	Third Example: Isothermal Flow Calorimeter	144
7.9	Calorimeters with Heat Exchange between the Sample and Surroundings	144
7.9.1	Isoperibol Calorimeters with Uncontrolled Heat Exchange	145
7.9.1.1	First Example: Classic Liquid (or Mixing) Calorimeter	145
7.9.1.2	Second Example: Combustion Calorimeter	148
7.9.1.3	Third Example: Drop Calorimeter	151
7.9.2	Isoperibol Calorimeter with Controlled Heat Exchange	154
7.9.2.1	First Example: Activity Monitor	159
7.9.2.2	Second Example: Large-Volume Battery Calorimeter	160
7.9.2.3	Third Example: Calvet Calorimeter	161
7.9.2.4	Fourth Example: Whole-Body Calorimeter	169
7.9.3	Isoperibol Flow Calorimeter	170
7.9.3.1	First Example: The Picker Calorimeter	175
7.9.3.2	Second Example: Flow Calorimeter for High-Pressure and High-Temperature Measurements	176
7.9.3.3	Third Example: Gas Combustion Calorimeter	177
7.9.3.4	Fourth Example: Microchip Flow Calorimeter	177
7.9.4	Calorimeters with Linear Temperature Change of the Surroundings	178
7.9.4.1	First Example: Heat Flow Differential Scanning Calorimeter	179
7.9.4.2	Second Example: Power-Compensated Differential Scanning Calorimeter	183
7.9.4.3	Third Example: Privalov Calorimeter	185
7.9.5	Calorimeters with Nonlinear Temperature Change of the Surroundings	186
7.9.5.1	First Example: Temperature-Modulated DSC	187
7.9.5.2	Second Example: Stepscan Differential Scanning Calorimetry	189
7.9.5.3	Third Example: Advanced Multifrequency TMDSC	189
7.10	Adiabatic Calorimeters	190
7.10.1	Calorimeters with a Thermally Isolated Sample	190
7.10.1.1	First Example: Nernst Calorimeter	191
7.10.1.2	Second Example: Low-Temperature Calorimeter	192
7.10.1.3	Third Example: AC Calorimeter	194
7.10.1.4	Fourth Example: 3ω Technique	195
7.10.1.5	Nernst's Method with a Contactless Energy Supply	196
7.10.2	Calorimeters with Zero Temperature Difference against the Surroundings	197
7.10.2.1	First Example: Adiabatic Reaction Calorimeter	198
7.10.2.2	Second Example: Adiabatic Flow Calorimeter	199

7.10.2.3	Third Example: Adiabatic Whole-Body Calorimeter	199
7.10.2.4	Fourth Example: Adiabatic Scanning Calorimeter	200
7.10.3	Quasi-adiabatic Calorimetry by Sudden Heat Events	201
7.10.3.1	Example: Pulse Heating Calorimeter	201
7.11	Other Calorimeters	202
7.11.1	Reaction Calorimeters	202
7.11.1.1	First Example: Reaction Calorimeter	203
7.11.1.2	Second Example: Accelerating Rate Calorimeter (ARC)	204
7.11.2	Special Calorimeters	206
7.11.2.1	Photocalorimeters	206
7.11.2.2	Pressure Calorimeters	206
7.11.2.3	Pressure Perturbation Calorimeter	206
7.11.2.4	Cement Calorimeter	207
	References	207
8	Recent Developments	213
8.1	Microchip Calorimetry	214
8.1.1	First Example: Thin-Film Differential Scanning Calorimeter	216
8.1.2	Second Example: Low-Temperature AC Nanocalorimeter	217
8.2	Ultrafast Calorimetry	217
8.2.1	First Example: Ultrafast Nanocalorimeter	218
8.2.2	Second Example: Flash Differential Scanning Calorimeter	220
8.3	Extreme Ranges of State	220
8.3.1	High Pressure	221
8.3.1.1	Example: Power-Compensated High-Pressure DSC	222
8.3.2	High Temperature	222
8.3.2.1	Example: Levitation Calorimetry on Nickel, Iron, Vanadium, and Niobium	223
8.3.3	Strong Magnetic Fields	224
8.3.3.1	Example: Influence of Magnetic Fields on Point Defects	224
8.3.4	Plasma Surroundings	224
8.3.4.1	Example: Calibration Using a Laser Beam	224
8.4	Calorimetry as an Analytical and Diagnostic Tool	225
8.4.1	First Example: “Artificial Nose”	225
8.4.2	Second Example: Infection Diagnostics	225
	References	226
9	Calorimetric Measurements: Guidelines and Applications	229
9.1	General Considerations	229
9.1.1	Sensitivity ($\Delta X/Q$ or $\Delta X/\Delta \Phi$)	230
9.1.2	Noise (δQ or $\delta \Phi$)	230
9.1.3	Linearity ($X_{\text{out}} = K \cdot X_{\text{in}}$) and Linearity Error ($\delta K/K$)	232
9.1.4	Apparatus Function ($f_{\text{app}}(t)$)	232
9.1.5	Accuracy and Total Error ($\{Q_{\text{measured}} - Q_{\text{true}}\}/Q_{\text{true}}$)	233
9.1.6	Repeatability and Random Uncertainty ($\pm \Delta Q/Q$)	235

	Conclusion	235
9.2	Guidelines to Calorimetric Experiments	235
9.2.1	Definition of the Problem to be Investigated	236
9.2.2	Selection of the Proper Calorimeter	237
9.2.2.1	Calorimeter Requirements	237
9.2.2.2	Selection of the Calorimeter	238
9.2.3	Testing of the Calorimeter	239
9.2.3.1	Calibration	239
9.2.3.2	Other Testing	242
9.2.4	Performing the Experiment	243
9.2.4.1	Preparation of the Sample	243
9.2.4.2	Calorimetric Measurement	244
9.2.4.3	Evaluation of the Measurement	245
9.2.5	Interpretation of the Results	245
9.2.6	Uncertainty Estimation	246
9.3	Calorimetric Applications	246
9.3.1	Example from Material Science	247
9.3.1.1	Definition of the Problem to be Investigated	247
9.3.1.2	Selection of the Calorimeter	247
9.3.1.3	Calorimetric Experiments	248
9.3.1.4	Evaluation of the Measurements	248
9.3.1.5	Interpretation of the Results	251
9.3.1.6	Uncertainty Estimation	252
9.3.2	Examples from Biology	256
9.3.2.1	Definition of the Problem to be Investigated	256
9.3.2.2	Selection of the Proper Calorimeter	256
9.3.2.3	Calorimetric Experiments	257
9.3.2.4	Evaluation of the Results	258
9.3.2.5	Calorimetry on Hornets	258
9.3.2.6	Uncertainty Estimation	259
9.3.3	Example from Medicine	259
9.3.3.1	Definition of the Problem to be Investigated	259
9.3.3.2	Selection of the Proper Calorimeter	259
9.3.3.3	Calorimetric Experiment	260
9.3.3.4	Evaluation of the Measurements	260
9.3.3.5	Interpretation of the Results	260
9.3.3.6	Uncertainty Estimation	261
9.3.4	Example from Chemistry	261
9.3.4.1	Definition of the Problem to be Investigated	262
9.3.4.2	Selection of the Proper Calorimeter	262
9.3.4.3	Calorimetric Experiment	263
9.3.4.4	Evaluation of the Measurements	263
9.3.4.5	Interpretation of the Results	264
9.3.4.6	Uncertainty Estimation	265
9.3.5	Example from Combustion Calorimetry	265

9.3.5.1	Definition of the Problem to be Investigated	265
9.3.5.2	Selection of the Proper Calorimeter	265
9.3.5.3	Calorimetric Experiment	267
9.3.5.4	Evaluation of the Measurements	267
9.3.5.5	Interpretation of the Results	268
9.3.5.6	Uncertainty Estimation	268
	References	269
