Preface *xi*

About the Authors *xiii*

Part I Principles *1*

1 Introduction *3*

- 1.1 Short History of Process Intensification *3*
- 1.2 Definitions and Interpretations of Process Intensification *5*
- 1.3 Fundamentals of Process Intensification – Principles, Approaches, Domains, and Scales *8*
- References *11*

2 The Four Principles *15*

- 2.1 Principle 1 – Toward Perfect Reactions *15*
- 2.2 Principle 2 – What Experience Molecules? *19*
- 2.3 Principle 3 – Driving Forces, Resistances, and Interfaces *21*
- 2.4 Principle 4 – About the Synergies *21*
- References *23*

Part II Domains *25*

3 STRUCTURE – PI Approaches in Spatial Domain *27*

- 3.1 Randomness and Order: Why Structure? *27*
- 3.2 Structures Targeting Molecular Events *29*
 - 3.2.1 Molecular Imprints *29*
 - 3.2.2 Molecular Reactors *33*
 - 3.2.3 Shape-Selective Catalysts *34*
 - 3.2.4 Semirigid Structures: Liquid Crystals *38*
- 3.3 Structures Targeting Heat Transfer *39*
 - 3.3.1 Microstructured Reactors *39*
 - 3.3.2 Structured Heat Exchangers *46*
- 3.4 Structures Targeting Mass Transfer *49*
 - 3.4.1 Microstructured Separation Systems *49*

3.4.2	Structured Internals for Reactions and Separations	55
3.5	Structures Targeting Mixing and Fluid Flow	63
3.5.1	Micromixers	63
3.5.2	Static Mixers	67
3.5.3	Fractal Systems	71
	References	73
4	ENERGY – PI Approaches in Thermodynamic Domain	83
4.1	Energy in Chemical Processes – A Broader Picture of the Present and the Future	83
4.2	Electric Fields	85
4.3	Magnetic Fields	90
4.4	Electromagnetic Fields	93
4.4.1	Microwaves	93
4.4.1.1	Liquid-Phase Organic Synthesis Reactions	97
4.4.1.2	Gas-Phase Catalytic Reactions	99
4.4.1.3	Solid–Liquid Extraction	99
4.4.1.4	Adsorbents Regeneration	102
4.4.1.5	Crystallization	103
4.4.1.6	Distillation	103
4.4.1.7	Membrane Processes	104
4.4.2	Plasmas	104
4.4.2.1	Plasma-Assisted Methane Coupling to Acetylene (Huels Process)	106
4.4.2.2	Plasma-Assisted Coal Gasification for Synthesis Gas Production	108
4.4.2.3	Plasma-Assisted CO ₂ Dissociation	109
4.4.3	Photochemical and Photocatalytic Reactors (Artificial Light)	111
4.4.4	Solar Reactors	118
4.4.5	Induction Heating	126
4.5	Acoustic Fields	129
4.6	Flow Fields	142
4.6.1	Hydrodynamic Cavitation	142
4.6.2	Ejector-based Liquid Jet Reactors	144
4.6.3	Supersonic Flow	147
4.6.4	Impinging-stream Reactors	150
4.7	High-Gravity and High-Shear Fields	152
4.7.1	Rotating Packed Beds	154
4.7.2	Spinning Disc Reactors	158
4.7.3	Rotor–Stator Devices	160
4.7.4	Process Intensification by Solids Moving in Centrifugal Fields	165
4.7.5	High Gravity Fields in Microprocessing Systems	167
	References	169
5	SYNERGY – PI Approaches in Functional Domain	197
5.1	Combining Functions	197
5.2	Synergies at Molecular Scale	199

5.2.1	Multifunctional Catalysts	199
5.2.2	Synergistic Use of Alternative Energy Forms	202
5.3	Synergies in Processing Units – Multifunctional Equipment and Integrated Operations	205
5.3.1	Integrating Catalysis and Mixing – The Monolithic Stirrer Concept	205
5.3.2	Integrating Mixing and Heat Exchange – Static Mixer Reactors and Heat Exchangers	205
5.3.3	Heat Exchangers as Chemical Reactors	208
5.3.4	Heat Pumping in Distillation Systems	209
5.3.5	Integrating Reactions and Separation – Reactive Separations	211
5.3.5.1	Reactive Distillation	211
5.3.5.2	Membranes in Chemical Reactors	213
5.3.5.3	Reactive Adsorption	215
5.3.5.4	Reactive Extraction	222
5.3.5.5	Reactive Crystallization	223
5.3.5.6	Reactive Absorption	226
5.3.6	Reactive Comminution	227
5.3.7	Handling Chemical Reactions in Highly Viscous Media – Reactive Extrusion	234
5.3.8	Integrating Separation Techniques – Hybrid Separations	235
5.3.8.1	Extractive Distillation	235
5.3.8.2	Adsorptive Distillation	237
5.3.8.3	Membrane Distillation	238
5.3.8.4	Membrane Crystallization	240
5.3.8.5	Extractive Crystallization	241
5.3.8.6	Membrane Absorption/Stripping	242
5.3.8.7	Membrane Chromatography (Adsorptive Membranes)	245
5.3.8.8	Membrane Extraction	246
	References	247
6	TIME – PI Approaches in Temporal Domain	257
6.1	Oscillatory Flow Reactors	258
6.2	Reverse Flow Reactors	262
6.3	Periodic Operation of Trickle Bed Reactors	269
6.4	Cyclic Distillation	271
6.5	Pulse Combustion	275
6.6	Pressure Swing Adsorption	284
6.7	Desorptive Cooling	286
6.8	Variable Volume Operation of Stirred Tank Reactors	288
6.9	Short Contact Time Reactors	290
6.9.1	Catalytic Partial Oxidation of Alkanes	291
6.9.2	Catalytic Partial Oxidation of Cellulose	293
	References	296

Part III Fundamentals in Practice – Designing a Sustainable, Intensified Process 299

7 Process Intensification and Sustainable Processing 301

7.1 Introduction 301

7.1.1 Sustainable Earth? 301

7.1.2 Sustainable Processing and the Position of PI 302

7.1.3 Sustainability Assessment Tools Applied to Process Intensification 303

7.2 Ecological Assessment of Intensified Technologies 312

7.2.1 Microreactor Engineering 313

7.2.2 Other Intensified Processes 316

7.3 Process Intensification and Inherent Safety 317

References 322

8 How to Design a Sustainable Intensified Process? 331

8.1 Conceptual Process Intensification Design 331

8.2 Case Study of Bhopal 332

References 339
