

## Contents

**Preface** XVII

**List of Contributors** XXI

**Part I Introduction** 1

- 1 Insights into Hierarchically Structured Porous Materials: From Nanoscience to Catalysis, Separation, Optics, Energy, and Life Science** 3  
*Bao-Lian Su, Clément Sanchez, and Xiao-Yu Yang*
- 1.1 Introduction 3
- 1.2 Synthesis Strategies to Hierarchically Structured Porous Materials 8
- 1.3 Emerging Applications of Hierarchically Structural Porous Materials 16
- 1.4 Conclusions 20  
Acknowledgments 20  
References 21
- 2 Hierarchy in Natural Materials** 29  
*Peter Fratzl and Marie Madeleine Giraud Guille*
- 2.1 Natural Materials as a Source of Inspiration in Materials Science 29
- 2.2 Hierarchies Based on Fiber Architectures 31
- 2.3 Liquid Crystalline Assemblies, Clues to Mimic Hierarchical Structures 33
- 2.4 Mineralized Biological Tissues, Models for Hybrid Materials 34
- 2.5 Concluding Remarks 37  
References 37

**Part II Synthesis Strategies to Hierarchically Structured Porous Materials 41**

- 3 Hierarchically Structured Porous Materials by Dually Micellar Templating Approach 43**  
*Özlem Sel and Bernd M. Smarsly*
- 3.1 Introduction 43
- 3.2 Nanocasting – True Liquid Crystalline Templating 43
- 3.2.1 Surfactants and Block Copolymer Mesophases as Templates 45
- 3.2.2 Ionic Liquids as Templates 45
- 3.3 Basics of Micellization 46
- 3.3.1 The Driving Force for Micellization – Hydrophobic Effect 47
- 3.3.2 Thermodynamics of Micelle Formation 48
- 3.4 Mixed Surfactant Solutions 49
- 3.4.1 Mixed Surfactant Systems at Higher Concentrations 49
- 3.5 Hierarchical Self-Assembly of Concentrated Aqueous Surfactant Mixtures – Hierarchical Mesoporous Structures 50
- 3.6 Conclusions 52
- References 52
- 4 Colloidal Crystal Templating Approaches to Materials with Hierarchical Porosity 55**  
*Nicholas D. Petkovich and Andreas Stein*
- 4.1 Introduction and Historical Overview 55
- 4.1.1 Opals and Colloidal Crystals 56
- 4.1.2 Inverse Opals and Three-Dimensionally Ordered Macroporous Materials 58
- 4.2 The Preparation of 3DOM Materials 61
- 4.2.1 Monodisperse Colloidal Spheres 61
- 4.2.2 Methods to Assemble Colloidal Crystals 63
- 4.2.3 Infiltration and Processing Routes 66
- 4.3 3DOM Materials with Intrinsic Secondary Porosity 69
- 4.3.1 Porosity Produced in Sol–Gel Syntheses 69
- 4.3.2 Textural Mesopores in Nanocrystalline Walls 72
- 4.3.3 Porosity in Carbon Materials 75
- 4.3.4 Using Nanocomposites to Generate Porosity 76
- 4.3.5 Porosity in 3DOM Clay Minerals 76
- 4.4 Hierarchical Materials from Multimodal Colloidal Crystal Templates 77
- 4.4.1 Templates from Combinations of Polymer Spheres with Similar Sizes 78
- 4.4.2 Templates from Combinations of Polymer Spheres and Small Silica Colloids 81
- 4.4.3 Heterostructured Colloidal Crystal Templates 83

4.5	Hierarchical Materials from Combinations of Soft and Colloidal Crystal Templating	84
4.5.1	Colloidal Crystal Templated Zeolites	86
4.5.2	Introduction to Soft Templating of Mesopores	86
4.5.3	Hierarchical Silica Structures	88
4.5.3.1	Cationic Surfactant Templates	88
4.5.3.2	Nonionic Surfactant Templates	89
4.5.3.3	Ionic-Liquid Surfactant Templates	92
4.5.4	Hierarchical Carbon-Containing Structures	92
4.5.4.1	Pure Carbon Structures	92
4.5.4.2	Carbon–Silica Composites and Derived Structures	93
4.5.5	Hierarchical Alumina Structures	96
4.5.6	Hierarchical Structures Containing Other Compounds	97
4.5.7	Structures Synthesized via Multiple Hard and Soft Templates	98
4.5.8	Formation and Structure of Mesopores Confined in Colloidal Crystals	100
4.5.9	Disassembly and Reassembly of 3DOM/m Materials	101
4.6	Hierarchical Opals and Related Structures	103
4.6.1	Monodisperse Mesoporous Silica Spheres	103
4.6.2	Self-Assembled Hierarchical Silica, Carbon, and Tin Oxide Opals	104
4.6.3	3DOM Zeolites from Hierarchical Silica Opals	107
4.6.4	Encapsulated Non-Close-Packed Hierarchical Opal	108
4.6.5	Inverse Opals as Templates for Hierarchical Opals	109
4.7	Conclusions and Outlook	112
