Contents

Preface *IX*
Prolog *XI*

Part One Reading Section *1*

Chapter 1 **Extremely small but incredibly active** *3*

Chapter 2 **Bacteria are organisms like you and me** *7*

Chapter 3 **My name is LUCA** *15*

Chapter 4 **From the Big Bang to LUCA** *23*

Chapter 5 **O_2** *33*

Chapter 6 **Life in boiling water** *39*

Chapter 7 **Life in the Dead Sea** *45*

Chapter 8 **Bacteria and archaea are everywhere** *53*

Chapter 9 **The power of photosynthesis, even in almost complete darkness** *65*

Chapter 10 **Man and his microbes** *73*

Chapter 11 **Without bacteria there is no protein** *81*

Chapter 12 **Napoleon's victory gardens** *87*

Chapter 13 **Alessandro Volta's and George Washington's combustible air** *91*

Chapter 14 **Microbes as climate makers** *99*

Chapter 15 **How a state was founded with the aid of *Clostridium acetobutylicum*** *105*

Chapter 16 **Pulque, wine, and biofuel** *111*

Chapter 17 **Energy conservation from renewable resources** *117*

Chapter 18 **Cheese and vinegar** *121*

Chapter 19 **The periodic table of bioelements** *127*

Chapter 20 **Bacterial sex life** *133*

Chapter 21 **Bacteria can also catch viruses** *145*

Chapter 22 **Antibiotics: from microorganisms against microorganisms** *149*

Chapter 23 **Plasmids and resistances** *159*

Chapter 24 ***Agrobacterium tumefaciens*, a genetic engineer *par excellence*** *165*

Chapter 25 ***Eco* R1 and PCR—molecular biology at its finest** *169*

Chapter 26 **Interbacterial relationships** *177*

Chapter 27 **From life as a nomad to life as an endosymbiont** *185*

Chapter 28 **Bacteria as production factories** *191*

Chapter 29 **Plants, animals, and humans as food resources for bacteria** *203*

Chapter 30 **Viruses, chemicals causing epidemics?** *221*

Chapter 31 **The "omics" era** *235*

Chapter 32 **Incredible microbes** *245*

Epilog *256*

Part Two Study Guide *257*

Overview to the Study Guide *259*

Section 1 **Microbial growth** *261*

Section 2 **Molecules that make up microbes** *267*

Section 3 **Evolution, from the RNA world to the tree of life** *277*

Section 4 **Archaea** *281*

Section 5 **Bacterial diversity** *289*

Section 6 **Membranes and energy** *297*

Section 7 **Carbon metabolism** *311*

Section 8 **Regulation of microbial metabolism** *325*

Section 9 **Genomes, genes, and gene transfer** *333*

Section 10 **In-depth study of four special topics** *337*

Appendix A Selected literature *345*
Appendix B Glossary *351*
Appendix C Subject index of figures and tables *373*
Credits *379*
Index *381*
