List of Contributors	<i>XV</i>
Preface to the Third Edition	<i>XXIX</i>

Volume 1

1	Introduction	<i>1</i>
	<i>Wolfgang A. Herrmann and Boy Cornils</i>	
1.1	Historical Pathways	<i>1</i>
1.2	Topical Developments Since Year 2000	<i>9</i>
1.3	Organization of the Third Edition	<i>11</i>
1.4	Historical Glossary	<i>13</i>
	References	<i>18</i>
Part A	Applied Homogeneous Catalysis	<i>23</i>
2	Hydroformylation	<i>25</i>
2.1	General Aspects	<i>25</i>
	<i>Boy Cornils</i>	
2.2	Conventional Processes	<i>26</i>
2.3	Aqueous-Phase Process	<i>71</i>
	<i>Ernst Wiebus, Klaus Schmid, and Boy Cornils</i>	
	References	<i>78</i>
3	Carbonylation	<i>91</i>
3.1	Carbonylation: Introduction and General Aspects	<i>91</i>
	<i>Matthias Beller</i>	
3.2	Carbonylation of Methanol and its Derivatives to Acetic Acid and Acetic Anhydride	<i>93</i>
	<i>Bradley A. Steinhoff and Joseph R. Zoeller</i>	
3.3	Alkyne Carbonylation	<i>118</i>
	<i>David J. Cole-Hamilton, and Eite Drent</i>	
3.4	Aryl-X and Related Carbonylations	<i>145</i>
	<i>Matthias Beller</i>	

- 3.5 Transition Metal-Catalyzed Oxidative Carbonylations 149
Xiao-Feng Wu, Helfried Neumann, and Matthias Beller
- 3.6 Alternating Copolymerization with Carbon Monoxide 156
Shingo Ito and Kyoko Nozaki
References 178
- 4 Polymerization and Copolymerization 191**
- 4.1 General Aspects 191
Klaus Beckerle and Jun Okuda
- 4.2 Metallocene-Catalyzed Polyolefins 203
Walter Kaminsky and Gerrit A. Luinstra
- 4.3 Post- and Non-metallocenes for Olefin Insertion Polymerization 225
Moritz C. Baier and Stefan Mecking
- 4.4 Polymerization of 1,3-Butadiene with Organometallic Complexes-Based Catalysts 248
Giovanni Ricci and Giuseppe Leone
- 4.5 Polycarbonates 273
Leslaw Mleczko, Aurel Wolf, and Alexandra Grosse Böwing
References 285
- 5 Oligomerization, Cyclooligomerization, Dimerization 307**
- 5.1 Selective Production of 1-Hexene and 1-Octene 307
Uwe Rosenthal, Bernd H. Müller, Normen Peulecke, Stephan Peitz, Anina Wöhl, and Wolfgang Müller
- 5.2 Dimerization and Selective Oligomerization – Selected Examples of Industrial Applications 328
Hélène Olivier-Bourbigou and Lionel Magna
- 5.3 Telomerization of 1,3-Butadiene 343
Piet W.N.M. van Leeuwen and Mathieu J.-L. Tschan
- 5.4 Cyclotrimerization Reactions of Alkynes 375
Marko Hapke, Nico Weding, and Karolin Kral
Abbreviations 392
References 392

Volume 2

- 6 Cross Coupling Reactions 411**
- 6.1 Coupling Reactions: Introduction and General Aspects 411
Matthias Beller
- 6.2 Industrial Applications of Palladium-Catalyzed Coupling Reactions 413
Alejandro Varela-Fernandez and Johannes G. de Vries
- 6.3 Ligand-Enabled Palladium-Catalyzed C–N and C–O Bond Formations from Aryl Halides, Tosylates and Mesylates 435
Shung Man Wong, Chau Ming So, and Fuk Yee Kwong
References 459

7	Oxidation	465
7.1	General Aspects	465
	<i>Joaquim Henrique Teles</i>	
7.2	Aromatic Carboxylic Acids	469
	<i>Walt Partenheimer</i>	
7.3	Oxidation of Olefins to Carbonyl Compounds (Wacker Process)	488
	<i>Reinhard Jira</i>	
7.4	Radical Chain Oxidations	508
	<i>Fabrizio Cavani and Giorgio Strukul</i>	
7.5	Manganese and Iron Bleaching Catalysts	519
	<i>Ronald Hage and Johannes W. de Boer</i>	
7.6	Catalytic Decarbonylative and Decarboxylative Processes	524
	<i>Lukas Gooßen and Patrizia Mamone</i>	
7.7	Oxidation of Phenols	543
	<i>Oxana A. Kholdeeva</i>	
	References	550
8	Hydrosilylation and Related Reactions of Silicon Compounds	569
	<i>Bogdan Marciniak, Hieronim Maciejewski, Cezary Pietraszuk, and Piotr Pawluć</i>	
8.1	Introduction	569
8.2	Hydrosilylation of Carbon–Carbon Multiple Bonds	571
8.3	Chemo- and Enantioselective Hydrosilylation of Unsaturated Carbon–Heteroatom Bonds	592
8.4	Silicometallics and Catalysis	598
	References	605
9	Hydrogenation	621
9.1	Industrial Application of Asymmetric Hydrogenation	621
	<i>Hans Ulrich Blaser, Benoît Pugin, and Felix Spindler</i>	
9.2	Hydrogenation of Esters	645
	<i>Lionel A. Saudan</i>	
	Abbreviations	681
	References	682
Part B	Recent Developments	691
Subpart 1:	Catalysts	691
10	New Trends in Organometallic Catalysts	693
10.1	Iron Catalysis	693
	<i>Kathrin Junge, Gerrit Wienhöfer, and Matthias Beller</i>	
10.2	Copper-Catalyzed Arylation of Nucleophiles: History, Renaissance and Scalable Reactions	744
	<i>Anis Tlili, Gwilherm Evano, and Marc Taillefer</i>	
10.3	Rare Earth Metal Catalysts	764
	<i>Rhett Kempe</i>	

- 10.4 Chiral Frustrated Lewis Pair Catalysts 773
Christoph Malbertz and Jürgen Klankermayer
References 787

Volume 3

- 11 **New Ligands** 809
- 11.1 *N*-Heterocyclic Carbenes 809
Rubén S. Ramón and Steven P. Nolan
- 11.2 Phosphorus Ligands in Homogeneous Catalysis 828
Armin Börner and Ralf Jackstell
- 11.3 Host–Guest Relations and Self-Organization in Homogeneous Catalysis 846
Frédéric Hapiot and Eric Monflier
- 11.4 Micellar Catalysis 863
Michael Schwarze and Reinhard Schomäcker
- 11.5 Switchable Catalysis 877
David E. Bergbreiter
- 11.6 Catalysis with Transition Metal Pincer Complexes 889
Lukasz T. Pilarski and Kálmán J. Szabó
- 11.7 Biocatalysis 898
Robert Kourist and Uwe T. Bornscheuer
References 922

Subpart 2: Methods 951

- 12 **Computational Investigations into the Heck Type Reaction Mechanisms** 953
Cai-Hong Guo and Haijun Jiao
- 12.1 Introduction 953
- 12.2 Oxidative Addition 954
- 12.3 Regioselectivity 966
- 12.4 Stereoselectivity 973
- 12.5 Alternative Mechanism Involving a Pd(II/IV) Redox System 978
- 12.6 Concluding Remarks 979
References 980
- 13 **Chemical Reaction Engineering Aspects of Homogeneously Catalyzed Processes** 983
Manfred Baerns and Peter Claus
- 13.1 Introduction 983
- 13.2 Kinetics in Homogeneous Catalysis 985
- 13.3 Aspects of Catalyst Recycling 995
- 13.4 Symbols 996
References 997

- 14 Supported Liquid Phase Catalysis 999**
Marco Haumann and Peter Wasserscheid
- 14.1 Introduction 999
- 14.2 Support Materials 1000
- 14.3 Thin Film Coating Materials 1003
- 14.4 Summary and Outlook 1061
References 1062
- 15 Recent Advances in Surface Organometallic Chemistry 1069**
Christophe Copéret and Florent Héroguel
- 15.1 Introduction 1069
- 15.2 Strategy and Methods 1069
- 15.3 A Decade of Development of Single-Site Heterogeneous Catalysts 1073
- 15.4 New Directions 1076
- 15.5 Challenges and Perspectives 1080
References 1081
- 16 High Throughput Screening of Homogeneous Catalysts: Selected Trends and Applications in Process Development 1085**
Rocco A. Paciello
- 16.1 Summary 1094
References 1095
- 17 Homogeneous Photocatalysis with Organometallic Compounds 1097**
Norbert Hoffmann
- 17.1 Introduction 1097
- 17.2 Metal Carbonyl Catalyzed Reactions 1098
- 17.3 Copper (I) Catalyzed [2+2] Photocycloadditions of Alkenes 1106
- 17.4 Photochemical Electron Transfer Mediated Reactions 1108
- 17.5 Photochemically Supported C–H Activation with Organometal Compounds 1124
- 17.6 Conclusions 1128
References 1129
- 18 Electrochemical Water Oxidation and Reduction Catalyzed by Organometallic Compounds 1135**
Mei Wang and Fei Li
- 18.1 Introduction 1135
- 18.2 Electrochemical Water Oxidation to O₂ Catalyzed by Organometallic Compounds 1136
- 18.3 Electrochemical Water Reduction to H₂ Catalyzed by Organometallic Compounds 1146
- 18.4 Concluding Remarks and Outlook 1187
References 1188

19 Metal-Catalyzed Multicomponent Reactions 1195*Jeffrey S. Quesnel and Bruce A. Arndtsen*

- 19.1 Introduction 1195
- 19.2 Multicomponent Carbonylation Reactions 1196
- 19.3 Multicomponent Cross-Coupling Reactions 1203
- 19.4 Metallacycles in Multicomponent Reactions 1210
- 19.5 Multicomponent Approaches to 1,3-Dipolar Cycloadditions 1215
- 19.6 Summary and Outlook 1217
- References 1217

Volume 4**20 Supercritical Fluids as Advanced Media for Reaction and Separation in Homogeneous Catalysis 1221***Jędrzej Walkowiak, Giancarlo Franciò, and Walter Leitner*

- 20.1 Introduction 1221
- 20.2 Organometallic Catalysis in Supercritical Fluids 1225
- 20.3 Organometallic Catalysis in CO₂-Expanded Liquid Phases 1235
- 20.4 Supercritical CO₂-Based Multiphase Systems for Continuous-Flow Homogeneous Catalysis 1239
- 20.5 Summary and Outlook 1253
- References 1253

Subpart 3: Special Reactions 1259**21 Carbonylation of Nitroarenes and Aromatic Amines 1261***Marcus Harrer and Jörg Sundermeyer*

- 21.1 Present Synthesis of Isocyanates via the Phosgene Route 1261
- 21.2 Alternative Carbonylation Strategies towards Carbonic Acid Derivatives 1262
- 21.3 Overview 1263
- 21.4 Reductive Carbonylation of Nitroarenes 1264
- 21.5 Redox Carbonylation of Nitroarenes and Aromatic Amines According to (21.4) and (21.5) 1274
- 21.6 Oxidative Carbonylation of Aromatic Amines According to (21.6) and (21.7) 1275
- 21.7 Summary 1280
- References 1281

22 Pauson–Khand Reaction 1287*Takanori Shibata*

- 22.1 Introduction 1287
- 22.2 Co-Catalyzed Reaction 1288

- 22.3 Ti-Catalyzed Reaction 1293
22.4 Ru-Catalyzed Reaction 1294
22.5 Rh-Catalyzed Reaction 1297
22.6 Ir-Catalyzed Reaction 1302
22.7 Summary 1304
References 1304
- 23 C–H Activation Coupling Reactions 1307**
Miguel A. Esteruelas and Montserrat Oliván
- 23.1 Introduction 1307
23.2 Mechanisms of C–H Bond Activation 1308
23.3 Selectivity of Competitive C–H Bond Activations 1309
23.4 Functionalization of Alkanes and C(sp³)-H Bonds 1310
23.5 Aromatic C–H Transformations 1315
23.6 Alkylation of Nitrogen Heterocycles 1323
23.7 Hydroacylation of Alkenes and Alkynes 1323
23.8 Summary and Outlook 1327
References 1328
- 24 Metathesis 1333**
Mariusz Kędziorek and Karol Grela
- 24.1 Historical Background (Introduction) 1333
24.2 Reaction Mechanism 1334
24.3 Homogeneous Catalytic Systems 1335
24.4 Industrial Applications 1342
24.5 Conclusion 1350
Acknowledgments 1350
References 1350
- 25 The Value and Application of Transition Metal Catalyzed Alkene Isomerization in Industry 1365**
Casey R. Larsen and Douglas B. Grotjahn
- 25.1 Introductory Remarks and Mechanistic Considerations 1365
25.2 Isomerization of Non-functionalized Alkenes 1367
25.3 Isomerization of Functionalized Alkenes 1370
25.4 Recent Developments 1374
25.5 Concluding Remarks 1375
References 1375
- 26 Catalysis and Scope of the Hydroamination of Non-activated CC Multiple Bonds 1379**
Zhen Li and Thomas E. Müller
- 26.1 Introduction 1379
26.2 Rare-Earth and Actinide Metals as Hydroamination Catalysts 1380
26.3 Hydroamination Catalysts Based on Group 4/5 Metals 1390

- 26.4 Hydroamination Catalysts Based on Alkaline-Earth Metals 1396
- 26.5 Late Transition-Metal Complexes as Homogeneous Hydroamination Catalysts 1397
- 26.6 Heterogeneous and Immobilized Hydroamination Catalysts 1408
- 26.7 Brønsted Acid Catalyzed Hydroamination of Alkenes and Alkynes 1410
- 26.8 Base-Catalyzed Hydroamination 1412
- 26.9 Conclusions 1415
- Acknowledgments 1417
- References 1417
- 27 Catalytic Amide Bond Forming Methods 1427**
Benjamin N. Atkinson, A. Rosie Chhatwal, and Jonathan M.J. Williams
- 27.1 Amidation of Carboxylic Acids 1427
- 27.2 Transamidation 1431
- 27.3 Amidation of Esters 1437
- 27.4 Amidation of Aldehydes (Without Oxime Intermediates) 1440
- 27.5 Amidation of Alcohols 1443
- 27.6 Amidation of Nitriles 1445
- 27.7 Oxime/Oxime Intermediates to Amides 1449
- 27.8 Aminocarbonylations 1452
- 27.9 Miscellaneous Amidations 1456
- 27.10 Conclusion 1457
- References 1458
- 28 Synthesis of Heterocycles by Pd-catalyzed and Pd-catalysis Initiated Multi-component Reactions 1463**
Thomas J. J. Müller
- 28.1 Introduction 1463
- 28.2 MCR by Insertion of Allenes 1464
- 28.3 MCR by Insertion of Carbon Monoxide 1468
- 28.4 MCR by Insertion of Alkenes and Alkynes 1470
- 28.5 MCR by Initial Sonogashira Alkynylation 1473
- 28.6 MCR by Carbonylative Sonogashira Alkynylation 1477
- 28.7 MCR by Catalytic Enamine Generation and Arylation 1478
- 28.8 Conclusion 1479
- List of Abbreviations 1480
- Acknowledgments 1480
- References 1480
- 29 Metal-Catalyzed Baeyer–Villiger Oxidations 1485**
Giorgio Strukul and Alessandro Scarso
- 29.1 Introduction 1485
- 29.2 Oxidation of Cyclobutanones 1487
- 29.3 Oxidation of Other Ketones 1491
- 29.4 BV in Water 1497

- 29.5 Organic and Heterogeneous Catalysis 1498
- 29.6 Conclusions 1503
References 1504
- 30 Dihydroxylations of Olefins and Related Reactions 1509**
Sebastian Schmidt and Bernd Plietker
- 30.1 Introduction 1509
- 30.2 Osmium 1509
- 30.3 Ruthenium 1515
- 30.4 Iron 1521
References 1522
- 31 Selective Alkane Oxidation 1525**
Anna Company and Miquel Costas
- 31.1 Introduction 1525
- 31.2 Iron-Based Catalysts 1526
- 31.3 Manganese-Based Catalysts 1528
- 31.4 Chromium-Based Catalysts 1531
- 31.5 Vanadium-Based Catalysts 1532
- 31.6 Ruthenium-Based Catalysts 1533
- 31.7 Metalloporphyrins as Catalysts 1535
- 31.8 Conclusions 1538
References 1539
- 32 Catalytic Click Reactions 1541**
Sanne Schoffelen and Morten Meldal
- 32.1 Introduction 1541
- 32.2 Copper-Catalyzed Azide–Alkyne Cycloaddition (CuAAC) 1542
- 32.3 Effect of Substrates and Environment on the CuAAC Reaction 1546
- 32.4 Ruthenium-Catalyzed Azide–Alkyne Cycloaddition (RuAAC) 1548
- 32.5 Other Types of Click Reactions 1550
References 1552
- 33 Sulfur in Catalysis 1557**
Philippe Kalck
- 33.1 Introduction 1557
- 33.2 Sulfur as a Coordination Atom of the Ligand, or as Part of the Ligand 1560
- 33.3 The Substrate Contains a Sulfur Atom 1569
- 33.4 Formation of Carbon–Sulfur Bonds by Catalysis 1570
- 33.5 Bioinspired Catalyst Design 1572
- 33.6 Conclusion 1573
References 1574

Subpart 4: Alternative Feedstocks 1579**34 Oleochemistry 1581***Andreas J. Vorholt and Arno Behr*

34.1 Introduction 1581

34.2 Processing of Fatty Acids and Glycerol 1583

34.3 Conclusions 1595

References 1595

35 Homogeneous Catalysis with CO₂ as a Building Block: An Industrial Perspective 1601*Thomas Schaub, Rocco A. Paciello, and Michael Limbach*

References 1612

36 The Role of Homogeneous Catalysis in the Conversion of Biomass and Biomass Derived Platform Chemicals 1615*Peter J. Deuss, Katalin Barta, Sandra Hinze, and Johannes G. de Vries*

36.1 Introduction 1615

36.2 (Hemi-)Cellulose and Sugars 1618

36.3 Lignin 1630

36.4 Oils and Fats 1636

References 1646

Subpart 5: Catalysis for Energy 1653**37 Photochemical Hydrogen Production with Earth-Abundant Metal Complexes as Molecular Catalysts 1655***Mei Wang and Licheng Sun*

37.1 Introduction 1655

37.2 Photocatalytic H₂-Evolving Systems with Iron Complexes as Catalysts 165837.3 Photocatalytic H₂-Evolving Systems with Cobalt Complexes as Catalysts 166737.4 Photocatalytic H₂-Evolving Systems with a Nickel Complex as Catalyst 1683

37.5 Concluding Remarks and Outlook 1684

References 1685

38 Water-Gas Shift Reaction 1689*Lars-Arne Schaper, Wolfgang A. Herrmann, and Fritz E. Kühn*

38.1 Introduction and Definition 1689

38.2 Mechanism 1690

38.3 Application 1692

38.4 Water-Gas Shift Reaction in Chemical Industry 1695

References 1697

Index 1699
