Preface XIII

1	General Introduction	1
1.1	Fundamental Knowledge Required for Successful Dispersion of Powders into Liquids	1
1.1.1	Wetting of Powder into Liquid	1
1.1.2	Breaking of Aggregates and Agglomerates into Individual Units	8
1.1.3	Wet Milling or Comminution	8
1.1.4	Stabilization of the Resulting Dispersion	9
1.1.5	Prevention of Ostwald Ripening (Crystal Growth)	9
1.1.6	Prevention of Sedimentation and Formation of Compact Sediments (Clays)	10
1.2	Particle Dimensions in Suspensions	11
1.3	Concentration Range of Suspensions	11
1.4	Outline of the Book	12
	References	16
2	Fundamentals of Wetting and Spreading	17
2.1	Introduction	17
2.2	The Concept of the Contact Angle	18
2.2.1	The Contact Angle	19
2.2.2	Wetting Line–Three-Phase Line (Solid/Liquid/Vapor)	19
2.2.3	Thermodynamic Treatment–Young’s Equation	19
2.3	Adhesion Tension	20
2.4	Work of Adhesion W_a	22
2.5	Work of Cohesion	22
2.6	Calculation of Surface Tension and Contact Angle	23
2.6.1	Good and Girifalco Approach	24
2.6.2	Fowkes Treatment	25
2.7	The Spreading of Liquids on Surfaces	25
2.7.1	The Spreading Coefficient S	25
2.8	Contact Angle Hysteresis	26

2.8.1	Reasons for Hysteresis	28
2.8.2	Wenzel's Equation	28
	References	29
3	The Critical Surface Tension of Wetting and the Role of Surfactants in Powder Wetting	31
3.1	The Critical Surface Tension of Wetting	31
3.2	Theoretical Basis of the Critical Surface Tension	32
3.3	Effect of Surfactant Adsorption	33
3.4	Dynamic Processes of Adsorption and Wetting	34
3.4.1	General Theory of Adsorption Kinetics	34
3.4.2	Adsorption Kinetics from Micellar Solutions	36
3.4.3	Experimental Techniques for Studying Adsorption Kinetics	37
3.4.3.1	The Drop Volume Technique	38
3.4.3.2	Maximum Bubble Pressure Technique	39
3.5	Wetting of Powders by Liquids	42
3.5.1	Rate of Penetration of Liquids: The Rideal–Washburn Equation	43
3.5.2	Measurement of Contact Angles of Liquids and Surfactant Solutions on Powders	44
3.5.3	Assessment of Wettability of Powders	45
3.5.3.1	Sinking Time, Submersion, or Immersion Test	45
3.5.3.2	List of Wetting Agents for Hydrophobic Solids in Water	45
	References	46
4	Structure of the Solid–Liquid Interface and Electrostatic Stabilization	49
4.1	Structure of the Solid–Liquid Interface	49
4.1.1	Origin of Charge on Surfaces	49
4.1.1.1	Surface Ions	49
4.1.1.2	Isomorphic Substitution	50
4.2	Structure of the Electrical Double Layer	51
4.2.1	Diffuse Double Layer (Gouy and Chapman)	51
4.2.2	Stern–Grahame Model of the Double Layer	52
4.3	Distinction between Specific and Nonspecific Adsorbed Ions	52
4.4	Electrical Double-Layer Repulsion	53
4.5	van der Waals Attraction	54
4.6	Total Energy of Interaction	57
4.6.1	Deryaguin–Landau–Verwey–Overbeek Theory	57
4.7	Flocculation of Suspensions	59
4.8	Criteria for Stabilization of Dispersions with Double-Layer Interaction	62
	References	62
5	Electrokinetic Phenomena and Zeta Potential	63
5.1	Stern–Grahame Model of the Double Layer	67

5.2	Calculation of Zeta Potential from Particle Mobility	68
5.2.1	von Smoluchowski (Classical) Treatment	68
5.2.2	The Huckel Equation	71
5.2.3	Henry's Treatment	72
5.3	Measurement of Electrophoretic Mobility and Zeta Potential	73
5.3.1	Ultramicroscopic Technique (Microelectrophoresis)	73
5.3.2	Laser Velocimetry Technique	76
5.4	Electroacoustic Methods	78
	References	83
6	General Classification of Dispersing Agents and Adsorption of Surfactants at the Solid/Liquid Interface	85
6.1	Classification of Dispersing Agents	85
6.1.1	Surfactants	85
6.1.2	Anionic Surfactants	85
6.1.3	Cationic Surfactants	86
6.1.4	Amphoteric (Zwitterionic) Surfactants	86
6.1.5	Nonionic Surfactants	87
6.1.6	Alcohol Ethoxylates	87
6.1.7	Alkyl Phenol Ethoxylates	88
6.1.8	Fatty Acid Ethoxylates	88
6.1.9	Sorbitan Esters and Their Ethoxylated Derivatives (Spans and Tweens)	89
6.1.10	Ethoxylated Fats and Oils	90
6.1.11	Amine Ethoxylates	90
6.1.12	Polymeric Surfactants	90
6.1.13	Polyelectrolytes	93
6.1.14	Adsorption of Surfactants at the Solid–Liquid Interface	93
6.1.15	Adsorption of Ionic Surfactants on Hydrophobic Surfaces	94
6.1.16	Adsorption of Ionic Surfactants on Polar Surfaces	97
6.1.17	Adsorption of Nonionic Surfactants	98
6.1.18	Theoretical Treatment of Surfactant Adsorption	101
6.1.19	Examples of Typical Adsorption Isotherms of Model Nonionic Surfactants on Hydrophobic Solids	103
	References	105
7	Adsorption and Conformation of Polymeric Surfactants at the Solid–Liquid Interface	107
7.1	Theories of Polymer Adsorption	110
7.2	Experimental Techniques for Studying Polymeric Surfactant Adsorption	117
7.3	Measurement of the Adsorption Isotherm	118
7.4	Measurement of the Fraction of Segments p	118
7.5	Determination of the Segment Density Distribution $\rho(z)$ and Adsorbed Layer Thickness δ_h	119

7.6	Examples of the Adsorption Isotherms of Nonionic Polymeric Surfactants	122
7.7	Adsorbed Layer Thickness Results	126
7.8	Kinetics of Polymer Adsorption	128
	References	129
8	Stabilization and Destabilization of Suspensions Using Polymeric Surfactants and the Theory of Steric Stabilization	131
8.1	Introduction	131
8.2	Interaction between Particles Containing Adsorbed Polymeric Surfactant Layers (Steric Stabilization)	131
8.2.1	Mixing Interaction G_{mix}	132
8.2.2	Elastic Interaction G_{el}	134
8.2.3	Total Energy of Interaction	135
8.2.4	Criteria for Effective Steric Stabilization	135
8.3	Flocculation of Sterically Stabilized Dispersions	136
8.3.1	Weak Flocculation	136
8.3.2	Incipient Flocculation	137
8.3.3	Depletion Flocculation	138
8.4	Bridging Flocculation by Polymers and Polyelectrolytes	138
8.5	Examples for Suspension Stabilization Using Polymeric Surfactants	142
8.6	Polymeric Surfactants for Stabilization of Preformed Latex Dispersions	146
	References	148
9	Properties of Concentrated Suspensions	151
9.1	Interparticle Interactions and Their Combination	151
9.1.1	Hard-Sphere Interaction	151
9.1.2	“Soft” or Electrostatic Interaction: Figure 9.1b	152
9.1.3	Steric Interaction: Figure 9.1c	153
9.1.4	van der Waals Attraction: Figure 9.1d	156
9.1.5	Combination of Interaction Forces	157
9.2	Definition of “Dilute,” “Concentrated,” and “Solid” Suspensions	160
9.3	States of Suspension on Standing	164
	References	169
10	Sedimentation of Suspensions and Prevention of Formation of Dilatant Sediments	171
10.1	Sedimentation Rate of Suspensions	172
10.2	Prevention of Sedimentation and Formation of Dilatant Sediments	178
10.2.1	Balance of the Density of the Disperse Phase and Medium	178

10.2.2	Reduction of the Particle Size	178
10.2.3	Use of High Molecular Weight Thickeners	178
10.2.4	Use of “Inert” Fine Particles	179
10.2.5	Use of Mixtures of Polymers and Finely Divided Particulate Solids	182
10.2.6	Controlled Flocculation (“Self-Structured” Systems)	183
10.2.7	Depletion Flocculation	186
10.2.8	Use of Liquid Crystalline Phases	190
	References	192
11	Characterization of Suspensions and Assessment of Their Stability	193
11.1	Introduction	193
11.2	Assessment of the Structure of the Solid/Liquid Interface	194
11.2.1	Double-Layer Investigation	194
11.2.1.1	Analytical Determination of Surface Charge	194
11.2.1.2	Electrokinetic and Zeta Potential Measurements	195
11.2.2	Measurement of Surfactant and Polymer Adsorption	196
11.3	Assessment of Sedimentation of Suspensions	199
11.4	Assessment of Flocculation and Ostwald Ripening (Crystal Growth)	201
11.4.1	Optical Microscopy	201
11.4.1.1	Sample Preparation for Optical Microscopy	203
11.4.1.2	Particle Size Measurements Using Optical Microscopy	203
11.4.2	Electron Microscopy	204
11.4.2.1	Transmission Electron Microscopy (TEM)	204
11.4.2.2	Scanning Electron Microscopy (SEM)	204
11.4.3	Confocal Laser Scanning Microscopy (CLSM)	205
11.4.4	Scanning Probe Microscopy (SPM)	205
11.4.5	Scanning Tunneling Microscopy (STM)	206
11.4.6	Atomic Force Microscopy (AFM)	206
11.5	Scattering Techniques	206
11.5.1	Light Scattering Techniques	207
11.5.1.1	Time-Average Light Scattering	207
11.5.2	Turbidity Measurements	208
11.5.3	Light Diffraction Techniques	208
11.5.4	Dynamic Light Scattering–Photon Correlation Spectroscopy (PCS)	211
11.5.5	Backscattering Techniques	214
11.6	Measurement of Rate of Flocculation	214
11.7	Measurement of Incipient Flocculation	215
11.8	Measurement of Crystal Growth (Ostwald Ripening)	216
11.9	Bulk Properties of Suspensions: Equilibrium Sediment Volume (or Height) and Redispersions	216
	References	217

12	Rheological Techniques for Assessment of Stability of Suspensions	219
12.1	Introduction	219
12.1.1	Steady-State Shear Stress σ –Shear Rate $\dot{\gamma}$ Measurements	219
12.1.2	Constant Stress (Creep) Measurements	219
12.1.3	Dynamic (Oscillatory) Measurements	220
12.2	Steady-State Measurements	220
12.2.1	Rheological Models for Analysis of Flow Curves	220
12.2.1.1	Newtonian Systems	220
12.2.1.2	Bingham Plastic Systems	221
12.2.1.3	Pseudoplastic (Shear Thinning) System	221
12.2.1.4	Dilatant (Shear Thickening) System	222
12.2.1.5	Herschel–Bulkley General Model	222
12.2.2	The Casson Model	222
12.2.3	The Cross Equation	222
12.2.4	Time Effects during Flow Thixotropy and Negative (or anti-) Thixotropy	223
12.3	Constant Stress (Creep) Measurements	225
12.3.1	Analysis of Creep Curves	226
12.3.1.1	Viscous Fluid	226
12.3.1.2	Elastic Solid	226
12.3.2	Viscoelastic Response	226
12.3.2.1	Viscoelastic Liquid	226
12.3.2.2	Viscoelastic Solid	227
12.3.3	Creep Procedure	228
12.4	Dynamic (Oscillatory) Measurements	229
12.4.1	Analysis of Oscillatory Response for a Viscoelastic System	229
12.4.2	Vector Analysis of the Complex Modulus	230
12.4.3	Dynamic Viscosity η'	230
12.4.4	Note that $\eta \rightarrow \eta(0)$ as $\omega \rightarrow 0$	230
12.4.5	Strain Sweep	231
12.4.6	Oscillatory Sweep	232
12.4.7	The Cohesive Energy Density E_c	232
12.4.8	Application of Rheological Techniques for the Assessment and Prediction of the Physical Stability of Suspensions	233
12.4.8.1	Rheological Techniques for Prediction of Sedimentation and Syneresis	233
12.4.8.2	Role of Thickeners	235
12.4.9	Assessment and Prediction of Flocculation Using Rheological Techniques	235
12.4.9.1	Strain Sweep Measurements	238
12.4.9.2	Oscillatory Sweep Measurements	239
12.4.10	Examples of Application of Rheology for Assessment and Prediction of Flocculation	240

12.4.10.1	Flocculation and Restabilization of Clays Using Cationic Surfactants	240
12.4.10.2	Flocculation of Sterically Stabilized Dispersions	240
	References	241
13	Rheology of Concentrated Suspensions	243
13.1	Introduction	243
13.1.1	The Einstein Equation	244
13.1.2	The Batchelor Equation	244
13.1.3	Rheology of Concentrated Suspensions	244
13.1.3.1	Rheology of Hard-Sphere Suspensions	245
13.1.3.2	Rheology of Systems with “Soft” or Electrostatic Interaction	246
13.1.3.3	Rheology of Sterically Stabilized Dispersions	248
13.1.3.4	Rheology of Flocculated Suspensions	250
13.1.4	Analysis of the Flow Curve	258
13.1.4.1	Impulse Theory: Goodeve and Gillespie	258
13.1.4.2	Elastic Floc Model: Hunter and Coworkers	259
13.1.5	Fractal Concept for Flocculation	259
13.1.6	Examples of Strongly Flocculated (Coagulated) Suspension	261
13.1.6.1	Coagulation of Electrostatically Stabilized Suspensions by Addition of Electrolyte	261
13.1.7	Strongly Flocculated Sterically Stabilized Systems	263
13.1.7.1	Influence of the Addition of Electrolyte	263
13.1.7.2	Influence of Increase of Temperature	266
13.1.8	Models for Interpretation of Rheological Results	267
13.1.8.1	Dublet Floc Structure Model	267
13.1.8.2	Elastic Floc Model	268
	References	270
