

## Contents

**Preface** XXI

**List of Contributors** XXIII

### **Part One Concepts and Methods for Recombinant Drug Production 1**

#### **1 Pharmaceutical Biotechnology and Industrial Applications—Learning Lessons from Molecular Biology 3**

*Oliver Kayser and Heribert Warzecha*

- 1.1 Introduction 3
- 1.2 Research Developments 5
  - 1.2.1 Protein Engineering 5
  - 1.2.2 Muteins 6
  - 1.2.3 Post-translational Engineering 7
  - 1.2.4 Synthetic Biology 9
- 1.3 Production Hosts and Upstream/Downstream Processing 10
- 1.4 Future Outlook 11
- References 12
- Weblinks 13

#### **2 Prokaryotic Cells in Biotech Production 15**

*Andriy Luzhetskyy, Gabriele Weitnauer, and Andreas Bechthold*

- 2.1 Introduction 15
- 2.2 Production of Natural Products by Microorganisms 15
  - 2.2.1 Production of Libraries of Natural Products 16
  - 2.2.2 Production of Natural Products by Cloning and Expression of  
Biosynthetic Gene Clusters 18
  - 2.2.3 Culture Manipulation to Wake Up Silent Gene Clusters 19
  - 2.2.4 Genomic Driven Approaches to Wake Up Silent Gene Clusters 19
  - 2.2.5 *E. coli*, an Interesting Host Also for Natural Product Synthesis 19
    - 2.2.5.1 Production of Polyketides in *E. coli* 19
    - 2.2.5.2 Metabolic Engineering of *E. coli* for Isoprenoid Biosynthesis 20

2.2.6	Global-Scale Strategies for Strains Improvement	21
2.2.6.1	System Biology, System Biotechnology, and “Omic” Approaches	21
2.2.6.2	Synthetic Biology Tools	22
2.2.6.3	Whole Genome Engineering Approaches	24
2.3	Prokaryotes as Producers of Recombinant Therapeutic Proteins	26
2.3.1	Prokaryotic Expression Systems	27
2.3.1.1	Host Strains	27
2.3.1.2	Expression Vectors	31
2.3.2	Production Steps	34
2.3.3	Products	34
2.3.3.1	Somatotropin (Somatotropin, STH, Human Growth Hormone, hGH)	34
2.3.3.2	Human Insulin	36
	References	37
<b>3</b>	<b>Mammalian Cells in Biotech Production</b>	<b>43</b>
	<i>Maria J. De Jesus and Florian M. Wurm</i>	
3.1	Introduction	43
3.2	Process Concepts and Cells	44
3.3	CHO-Derived Production Cell Lines	46
3.4	Rapid Generation of High-Producing Cell Lines	47
3.5	Silencing–Stability of Expression	49
3.6	High-Throughput Bioprocess Development	50
3.7	Disposable Bioreactors	51
3.8	Transient Gene Expression (TGE)	52
3.9	Conclusions	53
	References	54
<b>4</b>	<b>Biopharmaceuticals from Plants</b>	<b>59</b>
	<i>Heribert Warzecha</i>	
4.1	Introduction	59
4.2	Basics in Plant Biotechnology	60
4.3	Plant Cell Cultures as Production System for Human Glucocerebrosidase	63
4.4	Insulin from Safflower–A Unique Purification Scheme	64
4.5	Fast and Scalable Transient Tobacco-Based Expression Systems	65
4.6	Conclusion	67
	References	68
<b>5</b>	<b>Production of Biopharmaceuticals in Transgenic Animals</b>	<b>71</b>
	<i>Heiner Niemann, Alexander Kind, and Angelika Schnieke</i>	
5.1	Introduction	71
5.2	Sites of Production	73
5.2.1	Milk	73

5.2.2	Urine	76
5.2.3	Seminal Fluid	77
5.2.4	Blood	77
5.2.5	Bird Eggs	78
5.3	Transgenic Constructs	78
5.3.1	Organ Specific Expression Vectors	80
5.3.2	Inducible Expression	81
5.3.3	Non-integrating Vectors	81
5.4	Methods for the Production of Transgenic Animals	82
5.4.1	Pronuclear DNA Microinjection	83
5.4.1.1	Collection of Fertilized Eggs	83
5.4.1.2	Preparation of DNA	83
5.4.1.3	Injection of DNA	83
5.4.1.4	Transfer and Gestation in Recipients	84
5.4.1.5	Identification of Founders and Subsequent Breeding	85
5.4.2	Viral Mediated Gene Transfer	86
5.4.3	Sperm-Mediated Gene Transfer	88
5.4.4	Transposon-Mediated Gene Transfer	89
5.4.5	Pluripotent Stem Cells	90
5.4.5.1	Embryonic Stem Cells	90
5.4.5.2	Embryonic Germ Cells	91
5.4.5.3	Induced Pluripotent Stem Cells (iPS Cells)	92
5.4.6	Spermatogonial Stem Cells	93
5.4.7	Somatic Cell Nuclear Transfer	94
5.4.8	Highly Specific DNA Endonucleases	99
5.5	Analysis of Transgenic Animals	99
5.5.1	Analysis of Integrated Transgenes	100
5.5.2	Transgene-Expression Profile	101
5.5.3	Collection, Processing, and Protein Purification	101
5.6	Quality and Safety of the Product	102
5.7	Conclusions and Outlook	104
	References	105

## **6 Translation of New Technologies in Biomedicines: Shaping the Road from Basic Research to Drug Development and Clinical Application—and Back Again** 113

*Michael Balls, Andrew Bennett, and David Kendall*

6.1	Drug Discovery and Development	113
6.2	The Nature of Models and the Need for Them	114
6.3	New Technologies Toolbox	116
6.3.1	Use of Existing Knowledge	117
6.3.2	<i>In Chemico</i> and Other Physicochemical Approaches	118
6.3.3	<i>In Silico</i> Methods	119
6.3.3.1	<i>In Silico</i> Methods and Drug Discovery	120
6.3.3.2	<i>In Silico</i> Methods and Toxicology	121

6.3.4	<i>In Vitro</i> Systems	122
6.3.4.1	Cell Fractions	122
6.3.4.2	Cell Monolayer or Suspension Cultures	123
6.3.4.3	Co-cultures, Organotypic Cultures, and Reconstituted Tissue Constructs	124
6.3.4.4	Tissue Engineering	125
6.3.4.5	Stem Cells	125
6.3.4.6	Examples of Some Specific <i>In Vitro</i> Systems	127
6.3.4.7	Dynamic Bioreactors	127
6.3.4.8	Multi-organ Systems	128
6.3.4.9	Challenge of Cells, Organs, and Organisms on a Chip	129
6.3.4.10	<i>In Vitro</i> Assays	129
6.3.4.11	Coordinated Approach with <i>In Vitro</i> Models: the Vitrocellomics Project	130
6.3.5	High-Throughput Screening	131
6.3.6	High-Content Screening	131
6.3.7	Omics Approaches	131
6.3.7.1	Variety of Omics	132
6.3.7.2	Application of the Omics	132
6.3.7.3	Handling Information Produced by the Omics	133
6.3.8	Systems Modeling and Simulation	134
6.3.8.1	Pharmacokinetic Modeling	134
6.3.8.2	Virtual Tissue Modeling	135
6.3.8.3	Virtual Patient Populations	136
6.3.9	Biomarkers	136
6.3.10	Clinical Imaging	138
6.3.11	Bioinformatics	140
6.4	Strategic Use of the New Technology Tools	141
6.4.1	The Tools	142
6.4.2	The Strategies	142
6.4.3	Systems Biology	143
6.4.4	Involving the Patient	144
6.5	Translation as a Two-Way Process	145
6.6	Concluding Comment	146
	References	147

## **Part Two Bringing the Drug into Action – From Downstreaming to Approval 153**

<b>7</b>	<b>Overview and Classification of Approved Recombinant Drugs</b>	<b>155</b>
	<i>Theo Dingermann and Ilse Zündorf</i>	
7.1	Introduction	155
7.2	Classification of Recombinant Drugs from a Technical Point of View	166

7.3	Expression Systems	167
7.4	Proteins Derived from Modified Genes	170
7.5	Artificial Proteins	171
7.6	Post-expression Modifications of Recombinant Proteins	173
7.7	Biosimilars	174
	References	177
<b>8</b>	<b>Downstream Processing</b>	<b>179</b>
	<i>Uwe Gottschalk</i>	
8.1	Introduction	179
8.2	General Principles of DSP	180
8.3	Clarification	181
8.3.1	Centrifugation	181
8.3.2	Filtration	182
8.3.3	Increasing the Efficiency of Clarification	185
8.4	Chromatography	187
8.4.1	Column Chromatography	187
8.4.2	Membrane Chromatography	188
8.4.3	Capture Chromatography	189
8.4.4	Polishing Chromatography	191
8.4.5	Continuous Chromatography	193
8.5	Ultrafiltration/Diafiltration, and Virus Filtration	194
8.5.1	Ultrafiltration/Diafiltration	194
8.5.2	Virus Filtration	195
8.6	Crystallization	196
8.7	Recent Developments in Downstream Processing	196
	References	197
<b>9</b>	<b>Characterization of Recombinant Proteins</b>	<b>201</b>
	<i>Christoph Giese, Henning von Horsten, and Stefan Zietze</i>	
9.1	Introduction	201
9.2	Physical Chemical Characterization	201
9.2.1	Spectroscopic Methods	201
9.2.1.1	Ultraviolet Absorption Spectroscopy	201
9.2.1.2	Fluorescence Spectroscopy	202
9.2.1.3	Fourier Transform Infrared Spectroscopy	203
9.2.2	Chromatographic Methods	205
9.2.2.1	Size-Exclusion Chromatography	205
9.2.2.2	Reversed-Phase Chromatography	206
9.2.2.3	Hydrophilic Interaction Chromatography	207
9.2.2.4	Ion-Exchange Chromatography	207
9.2.3	Electrophoretic Methods	208
9.2.3.1	Gel Electrophoresis	208
9.2.3.2	Capillary Electrophoresis	209
9.2.4	Other Physical Chemical Methods	210

9.2.5	Mass Spectrometric Analysis of Biopharmaceutical Proteins	211
9.2.5.1	Operating Principle of Mass Spectrometers	211
9.2.5.2	Common Methods for MS Analysis of Biopharmaceuticals	215
9.3	Biological Characterization of Biopharmaceuticals <i>In Vitro</i>	219
9.3.1	Bioassays	219
9.3.1.1	Introduction	219
9.3.1.2	Defining Bioactivity	221
9.3.1.3	Binding Assays	222
9.3.1.4	Bead Array Technology	224
9.3.1.5	Immunogenicity Testing	224
9.3.1.6	Cell-Based Assays (CBA)	225
9.3.1.7	Assay Qualification and Validation	230
9.3.1.8	Outlook	231
	Acknowledgments	232
	Legals	232

## Part Four Recent Applications in Pharmaceutical Biotechnology 451

18	<b><i>In Silico</i> and Ultrahigh-Throughput Screenings (uHTS) in Drug Discovery: an Overview</b>	453
	<i>Debmalya Barh, Shoaib Ahmad, and Atanu Bhattacharjee</i>	
18.1	Introduction	453
18.1.1	High-Throughput Screening	453

- 18.1.2 Ensuring Quality, Quantity, and Cost Effectiveness Using Integrated Approaches 454
- 18.1.3 Traditional versus Novel Targets in Lead Discovery 455
- 18.2 *In Silico* Pharmacology and Virtual Ligand Screening for Drug Discovery 456
  - 18.2.1 Quantitative Structure–Activity Relationship (QSAR) 458
  - 18.2.2 Virtual Ligand Screening 459
  - 18.2.3 Virtual Affinity Profiling 459
  - 18.2.4 Data Visualization 460
  - 18.2.5 Applications of *In Silico* Pharmacology 461
- 18.3 Lead Discovery Using Integrative Virtual Screening 461
  - 18.3.1 Target-Based Virtual Screening 462
  - 18.3.2 Ligand-Based Virtual Screening 462
  - 18.3.3 Application of Integrative Virtual Screening 463
    - 18.3.3.1 Case of Cisplatin in Tumor Therapy 463
- 18.4 Application of Microarray Technology in HTS and Drug Discovery 463
  - 18.4.1 DNA Microarray 463
    - 18.4.1.1 DNA Microarray Fabrication 464
    - 18.4.1.2 Application of DNA Microarrays in HTS and Drug Discovery 465
  - 18.4.2 Chemical Microarray for Drug Screening and Discovery 467
    - 18.4.2.1 Chemical Microarray with Immobilized Technology 467
    - 18.4.2.2 Small Molecule Microarray (SMM) 467
    - 18.4.2.3 Dry Chemical Microarray 468
    - 18.4.2.4 Solution Phase Chemical Microarray 468
  - 18.4.3 Cell Microarrays in Screening and Drug Discovery 469
    - 18.4.3.1 Types of Cell Microarrays 469
    - 18.4.3.2 Cell Microarray Formats 470
    - 18.4.3.3 Applications of Cell Microarrays 470
- 18.5 Chemical Proteomics for Drug Discovery and Development 471
  - 18.5.1 Structure of a Probe 471
  - 18.5.2 Strategies in Chemical Proteomics in Drug Discovery 473
    - 18.5.2.1 Activity-Based Probe Profiling 473
    - 18.5.2.2 Fragment-Based Approach 474
    - 18.5.2.3 Applications of Chemical Proteomics 475
- 18.6 Target and Drug Discovery Using Lipomic Profiling 475
  - 18.6.1 Applications of Lipomic Profiling 476
    - 18.6.1.1 Case of Rosiglitazone in Diabetes Mellitus Treatment 476
- 18.7 Drug Discovery Using Integrative Genomics 476
  - 18.7.1 Applications of Integrative Genomics 476
    - 18.7.1.1 Infectomics and Antimicrobial Drug Resistance 477
    - 18.7.1.2 Yeast as Tool for Antifungal Drug Discovery 477
    - 18.7.1.3 Genomics and Proteomics in Antidiabetic Drug Discovery 477
    - 18.7.1.4 Human Genome Project and Anticancer Drug Discovery 477

18.7.1.5	Toxicogenomics for Hepatotoxicity	478
18.8	Toxicogenomics in Drug Discovery and Development	478
18.8.1	Toxicogenomics	478
18.8.2	Toxicogenomics in Drug Discovery	479
18.8.3	Toxicogenomic Studies Using <i>In Vitro</i> Models	480
18.8.4	Toxicogenomic Studies Using Animal Models	480
18.8.5	Toxicogenomics and Gene Polymorphisms	480
18.8.6	Application of Toxicogenomics	481
18.9	HTP RNAi Screening for Targeted Drug Discovery	482
18.9.1	HTS Using RNAi Libraries	482
18.9.2	Applications of RNAi in HTS	483
18.10	High-Throughput Screening with Stem Cells	483
18.10.1	Stem Cell	483
18.10.2	Advantages of Stem Cells	484
18.10.3	Applications of Stem Cells in Screening and Drug Discovery	484
18.11	Systems Biology in Drug Discovery	485
18.11.1	Industry Approaches to Systems Biology	485
18.11.2	Simulation Models	486
18.11.3	Applications of Systems Biology	486
18.12	Conclusion	488

## **19 Metabolic Engineering of Medicinal Plants and Microorganisms for the Production of Natural Products 491**

*Oktavia Hendrawati, Herman J. Woerdenbag, Jacques Hille, and Oliver Kayser*

19.1	Introduction	491
19.2	The Plant as a Source of Natural Products	495
19.2.1	Plant Cell Cultures	495
19.2.2	Transgenic Plants	496
19.3	Optimizing Biochemical Pathways	498
19.3.1	Strategies and Goals of Metabolic Engineering	498
19.3.2	Metabolic Pathways of Interest	499
19.3.3	Synthetic Biology	501
19.4	Metabolic Engineering Strategies and Techniques in Medicinal Plant Biotechnology	502
19.4.1	Upregulating of Pathways (Overexpression)	504
19.4.2	Redirecting Common Precursors	505
19.4.3	Targeting Metabolites to Specific Plant Cell Compartments	505
19.4.4	Creation of Storage of Overproduced Secondary Metabolites	506
19.4.5	Downregulating of Pathways (Silencing)	506
19.5	Challenges in Plant Metabolic Engineering	506
19.5.1	Unexplored Regulation of Secondary Metabolism	506
19.5.2	Pathways Are Often Species Specific	507

- 19.5.3 Cell Compartmentalization and Tissue Differentiation 507
- 19.5.4 Unpredicted or Unexpected Outcome 508
- 19.6 Metabolic Engineering Applications in Medicinal Plant Biotechnology 508
  - 19.6.1 Case Study: Podophyllotoxin Production in *Anthriscus sylvestris* 508
  - 19.6.2 Case Study: Scopolamine Biosynthesis in *Nicotiana tabacum* 509
  - 19.6.3 Case Study: Genistein Production in Transgenic *Arabidopsis*, Tobacco, Lettuce, Corn, Petunia, and Tomato 510
  - 19.6.4 Case Study: Expression of Spearmint Limone Synthase in Lavender 511
  - 19.6.5 Case Study: Artemisinin Biosynthesis in *Artemisia annua* 511
  - 19.6.6 Case Study: Morphine Biosynthesis in *Papaver somniferum* 512
  - 19.6.7 Case Study: Gossypol Reduction in Cottonseeds by Blocking  $\delta$ -Cadinene Synthase 513
- 19.7 Crossing Borders—Heterologous Production of Plant Compounds in Microorganisms 514
  - 19.7.1 Artemisinic Acid 514
  - 19.7.2 Stilbenes 514
  - 19.7.3 Curcuminoids 515
  - 19.7.4 Flavonoids 515
  - 19.7.5 Vanillin 516
- 19.8 Conclusion and Future Prospects 516
- References 518

## **20 Metabolomics as a Bioanalytical Tool for Characterization of Medicinal Plants and Their Phytomedical Preparations 527**

*Nizar Happyana, Remco Muntendam, and Oliver Kayser*

- 20.1 Introduction 527
- 20.2 Bioanalytical Tools 528
  - 20.2.1 Sample Preparation 530
  - 20.2.2 Nuclear Magnetic Resonance 531
  - 20.2.3 Mass Spectrometry 532
    - 20.2.3.1 Direct Injection Mass Spectrometry 533
    - 20.2.3.2 Gas Chromatography–Mass Spectrometry 534
    - 20.2.3.3 Liquid Chromatography–Mass Spectrometry 534
  - 20.2.4 Data Processing 535
- 20.3 Metabolomics Applications in Medicinal Plants 538
  - 20.3.1 Discrimination for Classification of Medicinal Plants 538
  - 20.3.2 Characterization of Metabolites in Plant Cultures and Transgenic Medicinal Plants 540
  - 20.3.3 Quality Control of Medicinal Plants 541
  - 20.3.4 Identification of Medicinal Plant Bioactivity 543
  - 20.3.5 Study Efficacy of Medicinal Plants 544
  - 20.3.6 Investigation of Medicinal Plant Toxicity 545
- 20.4 Conclusions 546

Acknowledgment 547

## **21 Integration of Biotechnologies for the Development of Personalized Medicine 553**

*Kewal K. Jain*

- 21.1 Introduction 553
- 21.2 Genetic Variations in the Human Genome 554
  - 21.2.1 Single Nucleotide Polymorphisms 555
  - 21.2.2 Complex Chromosomal Rearrangements 556
  - 21.2.3 Insertions and Deletions in the Human Genome 556
  - 21.2.4 Large-Scale Variation in the Human Genome 557
  - 21.2.5 Variation in Copy Number in the Human Genome 557
  - 21.2.6 Structural Variations in the Human Genome 558
- 21.3 Role of Biomarkers in the Development of Personalized Medicine 559
- 21.4 Technologies Used for the Development of Personalized Medicine 560
- 21.5 Molecular Diagnosis as a Basis for Personalized Medicine 560
  - 21.5.1 Real-Time PCR and Personalized Medicine 561
  - 21.5.2 Analysis of Single Biological Molecules for Personalized Medicine 563
  - 21.5.3 Molecular Imaging and Personalized Medicine 563
  - 21.5.4 Point-of-Care Diagnostics and Personalized Medicine 564
- 21.6 Sequencing and Personalized Medicine 564
  - 21.6.1 Sequencing of Variations in Human Genomes 565
  - 21.6.2 Study of Rare Variants in Pinpointing Disease-Causing Genes 565
- 21.7 Role of Biochips/Microarrays in the Development of Personalized Medicine 566
- 21.8 Role of Cytogenetics in the Development of Personalized Medicine 567
- 21.9 Role of “Omics” in Personalized Medicine 568
  - 21.9.1 Role of Pharmacogenetics 568
  - 21.9.2 Role of Pharmacogenomics 569
  - 21.9.3 Role of Pharmacoproteomics 570
  - 21.9.4 Role of Pharmacometabolomics 570
- 21.10 Role of Nanobiotechnology for the Development of Personalized Medicine 572
- 21.11 Systems Biology and Personalized Medicine 573
- 21.12 Personalized Biological Therapies 574
  - 21.12.1 Recombinant Human Proteins 575
  - 21.12.2 Therapeutic Monoclonal Antibodies 575
  - 21.12.3 Cell Therapy 575
  - 21.12.4 Gene Therapy 576
  - 21.12.5 RNA Interference 576

- 21.13 Personalized Vaccines 577
- 21.13.1 Personalized Vaccines for Viral Diseases 577
- 21.13.2 Personalized Cancer Vaccines 577
- 21.14 Concluding Remarks and Future Prospects of Personalized Medicine 578
- References 579
  
- 22 Xenotransplantation in Pharmaceutical Biotechnology 581**  
*Gregory J. Brunn and Jeffrey L. Platt*
- 22.1 Introduction 581
- 22.1.1 Alternative Sources of Transplantable Tissues 581
- 22.1.2 The Pig as a Source of Tissues and Organs for Clinical Xenotransplantation 582
- 22.2 Biological Barriers to Xenotransplantation 583
- 22.2.1 Graft Vascularization 583
- 22.2.2 Hyperacute Rejection 584
- 22.2.3 Complement Activation 585
- 22.2.4 Acute Vascular Rejection 586
- 22.2.5 Accommodation 588
- 22.2.6 Cellular Mediated Immune Responses 588
- 22.3 Physiological and Infectious Hurdles to Xenotransplantation 590
- 22.3.1 Interspecies Challenges 590
- 22.3.2 Zoonosis 591
- 22.4 Scenario for the Clinical Application of Xenotransplantation 592
