Preface XV

List of Contributors XVII

1	Attachment of Organic Layers to Materials Surfaces by Reduction of Diazonium Salts	1
	<i>Jean Pinson</i>	
1.1	A Brief Survey of the Chemistry and Electrochemistry of Diazonium Salts	1
1.2	The Different Methods that Permit Grafting of Diazonium Salts	3
1.2.1	Electrochemistry	3
1.2.2	Reducing Substrate, Homolytic Dediazonation, Reaction with the Substrate	4
1.2.3	Reducing Reagent	5
1.2.4	Neutral and Basic Media	6
1.2.5	Ultrasonication	6
1.2.6	Heating and Microwave	6
1.2.7	Mechanical Grafting	7
1.2.8	Photochemistry	7
1.3	The Different Substrates, Diazonium Salts, and Solvents that Can Be Used	7
1.3.1	Substrates	7
1.3.2	Diazonium Salts	9
1.3.3	Solvents	10
1.4	Evidence for the Presence of a Bond between the Substrate and the Organic Layer	11
1.4.1	Stability of the Layer	11
1.4.2	Spectroscopic Evidence for a Bond	12
1.5	From Monolayers to Multilayers	13
1.5.1	Monolayers	14
1.5.2	Layers of Medium Thickness	16
1.5.2.1	Thick Layers	19
1.6	Structure and Formation of Multilayers	21

1.6.1	Chemical Structure	21
1.6.2	The Spatial Structure of the Layers	22
1.6.3	Compactness of the Layers	23
1.6.4	Swelling of the Layer	24
1.6.5	Electron Transfer through the Layers	24
1.6.6	The Formation Mechanism of Multilayers	25
1.7	Conclusion	27
	References	27
2	Aryl–Surface Bonding: A Density Functional Theory (DFT) Simulation Approach	37
	<i>Nan Shao, Sheng Dai, and De-en Jiang</i>	
2.1	Introduction	37
2.2	Density Functional Theory	38
2.3	Bonding between Aryl and Various Substrates	38
2.3.1	On Graphite/Graphene	39
2.3.1.1	On the Basal Plane	39
2.3.1.2	On the Edges of Graphene	42
2.3.2	On Carbon Nanotubes	44
2.3.3	On Metal Surfaces	45
2.4	Summary and Outlook	48
	Acknowledgments	49
	References	50
3	Patterned Molecular Layers on Surfaces	53
	<i>Alison J. Downard, Andrew J. Gross, and Bradley M. Simons</i>	
3.1	Methods Based on Scanning Probe Lithography	53
3.1.1	AFM	54
3.1.2	SECM	54
3.1.3	Spotting	56
3.2	Methods Based on Soft Lithography	57
3.2.1	Printing	57
3.2.2	Molds	59
3.2.3	Nanosphere Lithography	59
3.3	Methods Based on Lithography	60
3.4	Methods Based on Surface-Directed Patterning	62
3.4.1	Modification of Si Surfaces	63
3.4.2	Modified Electrode Arrays	64
3.5	Summary and Conclusions	66
	References	68
4	Analytical Methods for the Characterization of Aryl Layers	71
	<i>Karsten Hinrichs, Katy Roodenko, Jörg Rappich, Mohamed M. Chehimi, and Jean Pinson</i>	
4.1	Introduction	71
4.2	Scanning Probe Microscopies	71

- 4.3 UV–VIS Spectroscopy: Transmission, Reflection, and Ellipsometry 72
- 4.4 IR Spectroscopy 72
 - 4.4.1 Transmission Spectroscopy 73
 - 4.4.2 Reflection Spectroscopy 74
 - 4.4.3 Infrared Spectroscopic Ellipsometry (IRSE) 75
 - 4.4.4 IRSE Surface Characterization 77
 - 4.4.5 *In Situ* IR Spectroscopy: ATR and IRSE 79
- 4.5 Raman Spectroscopy and Surface-Enhanced Raman Scattering (SERS) 83
- 4.6 X-ray Photoelectron Spectroscopy (XPS) 84
- 4.7 X-ray Standing Waves (XSW) 91
- 4.8 Rutherford Backscattering 93
- 4.9 Time of Flight Secondary Ion Mass Spectroscopy 93
- 4.10 Electrochemistry 94
- 4.11 Contact Angle Measurements 96
- 4.12 Conclusion 96
 - References 98

- 5 Modification of Nano-objects by Aryl Diazonium Salts 103**
Dao-Jun Guo and Fakhradin Mirkhalaf
 - 5.1 Introduction 103
 - 5.2 Electrochemical Modification of Nano-objects by Reduction of Diazonium Salts 105
 - 5.2.1 Surface Modification of Carbon Nano-objects via Electrochemical Reduction of Aryl Diazonium Cations 105
 - 5.2.2 Surface Modification of Metal and Metal Oxide Nano-objects via Electrochemical Reduction of Aryl Diazonium Cations 111
 - 5.3 Chemical Modification of Nano-objects by Reduction of Diazonium Salts 112
 - 5.3.1 Surface Modification of Carbon Nano-objects via Chemical Reduction of Aryl Diazonium Cations 112
 - 5.3.2 Surface Modification of Metal and Metal Oxide Nano-objects via Chemical Reduction of Aryl Diazonium Cations 116
 - 5.4 Summary and Conclusions 119
 - Acknowledgments 120
 - References 120

- 6 Polymer Grafting to Aryl Diazonium-Modified Materials: Methods and Applications 125**
Sarra Gam-Derouich, Samia Mahouche-Chergui, Hatem Ben Romdhane, and Mohamed M. Chehimi
 - 6.1 Introduction 125
 - 6.2 Methods for Grafting Coupling Agents from Aryl Diazonium Compounds 127

6.3	Grafting Macromolecules to Surfaces through Aryl Layers	130
6.3.1	Binding Macromolecules to Surfaces by a Grafting from Strategy	130
6.3.1.1	Surface-Initiated Atom Transfer Radical Polymerization (SI-ATRP)	130
6.3.1.2	Surface-Initiated Reversible Addition–Fragmentation Chain Transfer (SI-RAFT)	142
6.3.1.3	Surface-Initiated Photopolymerization	143
6.3.1.4	Alternative Methods	146
6.3.2	Attachment of Macromolecules through Grafting onto Strategies	147
6.3.2.1	Photochemical Attachment	147
6.3.2.2	Ring Opening	148
6.3.2.3	Acylation	149
6.3.2.4	Click Chemistry	149
6.3.2.5	Diazotation of Substrates and Macromolecules	150
6.4	Adhesion of Polymers to Surfaces through Aryl Layers	151
6.5	Conclusion	153
	References	153
7	Grafting Polymer Films onto Material Surfaces: The One-Step Redox Processes	159
	<i>Guy Deniau, Serge Palacin, Alice Mesnage, and Lorraine Tessier</i>	
7.1	Cathodic Electrografting (CE) in an Organic Medium	160
7.1.1	Direct Cathodic Electrografting of Vinylic Polymers	160
7.1.2	Indirect Cathodic Electrografting	162
7.2	Surface Electroinitiated Emulsion Polymerization (SEEP)	164
7.2.1	Characterization of Poly(Butyl Methacrylate) Films	166
7.2.2	Determination of the Film Structure	167
7.2.3	Reduction of Protons and the Role of Hydrogen Radicals	169
7.2.4	Mechanism of SEEP	170
7.3	Chemical Grafting via Chemical Redox Activation (Graftfast™)	171
7.3.1	Process without Vinylic Monomer	172
7.3.2	Process with Vinylic Monomer	174
7.3.2.1	Type of Materials	174
7.3.2.2	Parameters Controlled in the Process	174
7.4	Summary and Conclusions	177
	References	178
8	Electrografting of Conductive Oligomers and Polymers	181
	<i>Jean Christophe Lacroix, Jalal Ghilane, Luis Santos, Gaëlle Trippe-Allard, Pascal Martin, and Hyacinthe Randriamahazaka</i>	
8.1	Introduction	181
8.2	Conjugated Oligomers and Polymers	181

8.3	Surface Grafting Based on Electroreduction of Diazonium Salts	184
8.4	Polyphenylene and Oligophenylene-Tethered Surface Prepared by the Diazonium Reduction of Aniline or 4-Substituted Aniline	187
8.5	n-Doping and Conductance Switching of Grafted Biphenyl, Terphenyl, Nitro-biphenyl and 4-Nitroazobenzene Mono- and Multilayers	187
8.6	p-Doping and Conductance Switching of Grafted Oligo-Phenylthiophene or Oligothiophene Mono- and Multilayers	190
8.7	p-Doping and Conductance Switching of Grafted Oligoaniline Mono- and Multilayers	192
8.8	Conclusion and Outlook	193
	References	195
9	The Use of Aryl Diazonium Salts in the Fabrication of Biosensors and Chemical Sensors	197
	<i>J. Justin Gooding, Guozhen Liu, and Alicia L. Gui</i>	
9.1	Introduction	197
9.1.1	Sensors and Interfacial Design	197
9.1.2	Molecular Level Control over the Fabrication of Sensing Interfaces	198
9.2	The Important Features of Aryl Diazonium Salts with Regard to Sensing	200
9.3	Sensors and Biosensors Fabricated Using Aryl Diazonium Salts	201
9.3.1	Chemical Sensors – Sensors Fabricated via the Immobilization of Chemical Recognition Species	201
9.3.2	Biosensors	205
9.3.2.1	Enzyme Biosensors	206
9.3.2.2	Immunobiosensors	208
9.3.2.3	DNA-Based Biosensors	210
9.3.2.4	Cell-Based Biosensors	213
9.4	Conclusions	213
	References	214
10	Diazonium Compounds in Molecular Electronics	219
	<i>Richard McCreery and Adam Johan Bergren</i>	
10.1	Introduction	219
10.2	Fabrication of Molecular Junctions Using Diazonium Reagents	222
10.2.1	Substrates for Diazonium-Derived Molecular Junctions	222
10.2.2	Surface Modification Using Diazonium Chemistry	223
10.2.3	Application of Top Contacts	225
10.3	Electronic Performance of Diazonium-Derived Molecular Junctions	226
10.3.1	Surface Diffusion Mediated Deposition (SDMD)	227
10.3.2	Structural Control of Molecular Junction Behavior	230

10.3.3	Redox Reactions in Molecular Junctions	232
10.3.4	Microfabricated Molecular Devices Made with Diazonium Chemistry	233
10.4	Summary and Outlook	235
	Acknowledgments	236
	References	236
11	Electronic Properties of Si Surfaces Modified by Aryl Diazonium Compounds	241
	<i>Jörg Rappich, Xin Zhang, and Karsten Hinrichs</i>	
11.1	Introduction	241
11.2	Experimental Techniques to Characterize Electronic Properties of Si Surfaces in Solutions	242
11.2.1	<i>In Situ</i> Photoluminescence and Photo Voltage Measurements	242
11.2.2	<i>In Situ</i> PL and PV Measurements during Electrochemical Grafting	244
11.2.3	Reaction Scheme of the Electrochemical Grafting via Diazonium Ions	245
11.2.4	Change in I_{PL} and U_{PV} during Electrochemical Grafting onto Si Surfaces	246
11.2.5	Change in Band Bending and Work Function after Electrochemical Grafting onto Si Surfaces	248
11.2.6	pH Dependence and Enhanced Surface Passivation	249
11.3	Conclusion and Outlook	251
	Acknowledgments	252
	References	252
12	Non-Diazonium Organic and Organometallic Coupling Agents for Surface Modification	255
	<i>Fetah I. Podvorica</i>	
12.1	Amines	255
12.1.1	Characterization of the Grafted Layer	257
12.1.1.1	Electrochemical Methods	257
12.1.1.2	Surface Analysis Techniques	258
12.1.2	Chemical Grafting	259
12.1.3	Localized Electrografting	260
12.1.4	Grafting Mechanism	261
12.1.5	Applications	262
12.2	Arylhydrazines	264
12.3	Aryltriazenes	266
12.4	Alcohols	267
12.4.1	Observation and Characterization of the Film	268
12.4.2	Applications	269
12.5	Grignard Reagents	270
12.5.1	Characterization of the Layers	271
12.5.2	Grafting Mechanism	272

12.6	Onium Salts	272
12.6.1	Iodonium Salts	272
12.6.2	Sulfonium Salts	273
12.6.3	Ammonium Salts	273
12.7	Alkyl Halides	274
12.8	Conclusion	275
	References	276
13	Various Electrochemical Strategies for Grafting Electronic Functional Molecules to Silicon	283
	<i>Dinesh K. Aswal, Shankar Prasad Koiry, and Shiv Kumar Gupta</i>	
13.1	Introduction	283
13.2	Architecture of Hybrid Devices	284
13.2.1	Molecular Dielectrics and Wires	285
13.2.2	Molecular Diodes	286
13.2.3	Resonant Tunnel Diodes	286
13.2.4	Molecular Transistors	286
13.3	Electrografting of Monolayers to Si	287
13.3.1	Essential Requirements	287
13.3.2	Experimental Process of Electrografting	287
13.4	Negative Differential Resistance Effect in a Monolayer Electrografted Using a Diazonium Complex	288
13.4.1	Electrografting of DHTT	288
13.4.2	NDR Effect in DHTT Monolayers	290
13.5	Dielectric Monolayers Electrografted Using Silanes	293
13.5.1	Mechanism of Electrografting	293
13.5.2	Electrical Characterization	294
13.6	Molecular Diodes Based on C ₆₀ /Porphyrin-Derivative Bilayers	295
13.6.1	Fabrication Process	296
13.6.1.1	Electrografting of Acceptor C ₆₀ Layer on Si	296
13.6.1.2	Self-Assembly of Donor Porphyrin Derivative Layer on C ₆₀ /Si	297
13.6.2	Rectification Characteristics of D–A Bilayers	298
13.7	Memory Effect in TPP-C11 Monolayers Electrografted Using a C=C Linker	301
13.7.1	Electrografting of TPP-C11 Monolayer	301
13.7.2	Electrical Bistability and Memory Effect	303
13.8	Summary	305
	References	305
14	Patents and Industrial Applications of Aryl Diazonium Salts and Other Coupling Agents	309
	<i>James A. Belmont, Christophe Bureau, Mohamed M. Chehimi, Sarra Gam-Derouich, and Jean Pinson</i>	
14.1	Introduction	309
14.2	Patents	309
14.2.1	The Surface Chemistry of Diazonium Salts	309

14.2.2	The Surface Chemistry of Other Coupling Agents	310
14.2.3	Post-Modification of the Grafted Layers	310
14.2.4	Composite Materials	310
14.2.5	The Surface Modification of Nano-objects	312
14.2.6	Microelectronics	312
14.2.7	Biomedical Applications	312
14.2.8	Sensors, Biosensors, Surfaces for Biological Applications	312
14.2.9	Energy Conversion	313
14.3	Industrial Applications	313
14.3.1	The Development of Modified Carbon Blacks	313
14.3.2	Industrial Applications of the Electropolymerization of Vinylics: Alchimer and AlchiMedics	314
14.3.2.1	From Research to Development	314
14.3.2.2	Application of eG™ to Drug-Eluting Stents: AlchiMedics	315
14.3.2.3	Application of eG™ to Copper Interconnects: Alchimer	317
14.4	Conclusion	319
	References	319
