Preface *xi*

List of Contributors *xiii*

1	Synthesis and Preparation of Oxide Ultrathin Films	1
	<i>Sergio Valeri and Stefania Benedetti</i>	
1.1	Introduction	1
1.2	Basic Aspects of Fabrication	3
1.3	Physical Methods	7
1.3.1	Controlled Oxidation of Bulk Single-Crystal Surfaces	7
1.3.2	Sputtering and Ablation of Oxide Targets	8
1.3.2.1	Sputter Deposition	8
1.3.2.2	Pulsed Laser Deposition	8
1.3.3	Reactive Physical Vapor Deposition	9
1.3.3.1	Film Growth by Sputtering or Ablation of Pure Targets in Oxidizing Atmosphere	10
1.3.3.2	Film Growth by Reactive MBE	10
1.3.4	Post-oxidation of Pre-deposited Thin Metal Films	13
1.4	Chemical Methods	14
1.4.1	Chemical Vapor Deposition	15
1.4.2	Liquid-Precursor-Based Thin-Film Deposition Techniques	16
1.5	Oxide Nanosheets and Buried Layers	19
1.5.1	Exfoliated and Detachable Layers	19
1.5.1.1	Exfoliated Oxide Nanosheets	19
1.5.1.2	Detachable Ultrathin Oxide Films	19
1.5.2	Buried Oxide Layers	20
1.6	Conclusions and Perspectives	21
2	Characterization Tools of Ultrathin Oxide Films	27
	<i>David C. Grinter and Geoff Thornton</i>	
2.1	Introduction	27
2.2	Structure Determination Techniques	28

Oxide Ultrathin Films: Science and Technology, First Edition.
 Edited by Gianfranco Pacchioni and Sergio Valeri.
 © 2012 WILEY-VCH Verlag GmbH & Co. KGaA, Weinheim.
 Published 2012 by WILEY-VCH Verlag GmbH & Co. KGaA

2.2.1	Scanned Probe Microscopy	28
2.2.2	Scanning Tunneling Microscopy	28
2.2.2.1	Case Study: CeO ₂ (111)/Pt(111)	30
2.2.3	Noncontact Atomic Force Microscopy	30
2.2.4	X-Ray Photoemission Electron Microscopy	31
2.2.4.1	Case Study: Iron Oxide on α -Al ₂ O ₃ (0001)	33
2.2.5	Surface X-Ray Diffraction	33
2.2.5.1	Case Study: Oxidation of Rh(111)	34
2.2.6	Photoelectron Diffraction	35
2.2.6.1	Case Study: VO Layers on TiO ₂ (110)	36
2.3	Spectroscopic Techniques	36
2.3.1	X-Ray Magnetic Circular/Linear Dichroism	36
2.3.1.1	Case Study: Fe _{3-δ} O ₄ (111) Ultrathin Films on Pt(111)	38
2.3.1.2	Case Study: NiO/FeO(001)	39
2.3.2	Magneto-optical Kerr Effect	40
2.3.2.1	Case Study: Fe/NiO/MgO(001) and Fe/NiO/Ag(001)	40
2.3.3	Conversion Electron Mössbauer Spectroscopy	41
2.3.3.1	Case Study: Fe ₃ O ₄ (111)/Pt(111)	43
2.4	Summary	43
3	Ordered Oxide Nanostructures on Metal Surfaces	47
	<i>Falko P. Netzer and Svetlozar Surnev</i>	
3.1	Introduction	47
3.2	Fabrication of Oxide Nanostructures	48
3.3	Novel Structure Concepts	49
3.4	Dimensionality Aspects: from Two- to One- to Zero-Dimensional Structures	58
3.5	Transition from Two- to Three-Dimensional Structures: Growth of Bulk Structures out of Interfacial Layers	63
3.6	Synopsis	69
	Acknowledgment	69
4	Unusual Properties of Oxides and Other Insulators in the Ultrathin Limit	75
	<i>Livia Giordano and Gianfranco Pacchioni</i>	
4.1	Introduction	75
4.2	Evolution of Band Gap with Film Thickness	77
4.3	Electronic Transport through Oxide Ultrathin Films	79
4.4	Work Function Changes Induced by Oxide Films	85
4.5	Nanoporosity: Oxide Films as Molecular and Atomic Sieves	89
4.6	Flexibility of Oxide Thin Films and Polaronic Distortion	94
4.7	Conclusions	97
	Acknowledgments	97

5	Silica and High-<i>k</i> Dielectric Thin Films in Microelectronics	101
	<i>Gennadi Bersuker, Keith McKenna, and Alexander Shluger</i>	
5.1	Introduction	101
5.2	Electrical Characterization of High- <i>k</i> Dielectrics on Silicon	103
5.3	Theoretical Modeling of Gate Dielectric Films	104
5.3.1	Aims of Theoretical Modeling	104
5.3.2	Computational Methods	105
5.4	Models of the Structure and Properties of HfO ₂ Gate Dielectric Films	106
5.4.1	Oxygen-Deficient Defect Centers in Bulk HfO ₂	106
5.4.2	Self-Trapped Polarons in HfO ₂	107
5.4.3	Using Doping to Increase the <i>k</i> Value in HfO ₂	108
5.4.4	Modeling of Si/SiO ₂ /HfO ₂ Films and Interfaces	109
5.5	Polycrystalline Gate Oxide Films	110
5.5.1	Impact of Polycrystallinity on Microelectronic Device Characteristics	110
5.5.2	Structure and Electronic Properties of Grain Boundaries	112
5.5.3	Defect Segregation at Grain Boundaries	113
5.6	Conclusions and Outlook	114
	Acknowledgments	115
6	Oxide Passive Films and Corrosion Protection	119
	<i>Philippe Marcus and Vincent Maurice</i>	
6.1	Introduction	119
6.2	Electrochemical Fundamentals of Passivation of Metals	119
6.3	Chemical Composition, Chemical States, and Thickness of Passive Films on Metals and Alloys	122
6.3.1	Copper, silver, nickel, iron, and chromium	122
6.3.2	Stainless Steels	124
6.4	Two-Dimensional Oxide Passive Films on Metals	126
6.4.1	Copper	126
6.4.2	Silver	128
6.5	Growth and Nanostructure of Three-Dimensional Ultrathin Oxide Films	130
6.5.1	Cu(I) and Cu(I)/Cu(II) Passive Films	131
6.5.2	Ni(II) Passive Films	133
6.5.3	Fe(II)/Fe(III) Passive Films	135
6.5.4	Aging Effects on Cr(III)-Rich Passive Films	136
6.6	Corrosion Modeling by DFT	137
6.7	Conclusion	140

7	Oxide Films as Catalytic Materials and Models of Real Catalysts 145
	<i>Hans-Joachim Freund</i>
7.1	Introduction 145
7.2	Oxide Thin Films Grown as Supports 146
7.3	Systems to Model Real Catalysts 154
7.3.1	Supported Gold 154
7.3.2	Oxides on Oxides: Vanadia Nanoparticles on Ceria 163
7.4	Ultrathin-Film Catalysts 166
7.5	Synopsis 173
	Acknowledgments 174
8	Oxide Films in Spintronics 181
	<i>Riccardo Bertacco and Franco Ciccacci</i>
8.1	Introduction 181
8.2	Historical Notes 182
8.3	Half-Metallic Manganites: the Case of LSMO 183
8.4	Electric Control of Magnetization in Oxide Heterostructures 189
8.4.1	Proximity and Electric Field Effects on Magnetic Properties of LSMO Films 189
8.4.2	Magnetoelectric Coupling at Fe–BTO Interfaces 196
8.5	Conclusions and Perspectives 197
	Acknowledgments 197
9	Oxide Ultrathin Films for Solid Oxide Fuel Cells 201
	<i>Tatsumi Ishihara</i>
9.1	Overview of Solid Oxide Fuel Cell Technology 201
9.2	Preparation of Oxide Ion Conductor Thin Films 203
9.3	Nano Size Effects on Oxide Ion Conductor Films 206
9.4	Power Generating Property of SOFCs using LaGaO ₃ Thin Films 208
9.5	Development of μ -SOFCs 216
9.6	Concluding Remarks 217
10	Transparent Conducting and Chromogenic Oxide Films as Solar Energy Materials 221
	<i>Claes-Göran Granqvist</i>
10.1	Introduction 221
10.2	Transparent Infrared Reflectors and Transparent Electrical Conductors 223
10.2.1	Overview 223
10.2.2	Computed Optical Data for ITO Films 225
10.2.3	Alternative Transparent Conductors 226

10.3	Thermochromics	228
10.3.1	Overview	228
10.3.2	VO ₂ Films and Nanoparticles: How to Improve the Modulation of T _{sol}	229
10.3.3	Magnesium Doping of VO ₂ : How to Enhance T _{lum}	231
10.4	Electrochromics	232
10.4.1	Overview	232
10.4.2	Nanostructural Features: A Closer Look at EC Films	233
10.4.3	EC Foils by Roll-to-Roll Manufacturing: Some Initial Results	234
10.5	Summary and Concluding Remarks	235
11	Oxide Ultrathin Films in Sensor Applications	239
	<i>Elise Brunet, Giorgio C. Mutinati, Stephan Steinhauer, and Anton Köck</i>	
11.1	Introduction	239
11.2	Sensor Applications	241
11.2.1	Magnetic Sensors	243
11.2.2	Photodetectors and Detectors for the (F)IR Region	246
11.2.3	Electrochemical Sensors	246
11.2.4	Gas Sensors	247
11.2.4.1	Optical Gas Sensors	248
11.2.4.2	Mass-Sensitive Gas Sensors	249
11.2.4.3	Electrical Gas Sensors	250
11.3	SnO ₂ -Based Gas Sensors	254
11.3.1	Sensor Fabrication	254
11.3.2	Sensor Performance	255
11.4	Conclusion	258
12	Ferroelectricity in Ultrathin-Film Capacitors	265
	<i>Céline Lichtensteiger, Pavlo Zubko, Massimiliano Stengel, Pablo Aguado-Puente, Jean-Marc Triscone, Philippe Ghosez, and Javier Junquera</i>	
12.1	Introduction	265
12.2	Ferroelectricity: Basic Definitions	266
12.3	Theoretical Methods for the Study of Bulk Ferroelectric Materials	269
12.3.1	Devonshire–Ginzburg–Landau Phenomenological Theory	269
12.3.2	First-Principles Simulations	270
12.3.3	Second-Principles Methods: Model Hamiltonians and Shell Models	272
12.4	Modeling Ferroelectricity in Oxides	274
12.5	Theory of Ferroelectric Thin Films	277
12.5.1	Mechanical Boundary Conditions: Strain	277
12.5.2	Electrical Boundary Conditions: Imperfect Screening	280
12.5.3	Electrical Functionals with a Depolarization Field	284
12.5.4	Chemical Bonding Contributions to Electrical Boundary Conditions	285

12.6	Polarization Domains and Domain Walls	287
12.6.1	Kittel Law	287
12.6.2	Domain Morphology	289
12.6.3	Domain Walls	290
12.7	Artificially Layered Ferroelectrics	291
12.7.1	Electrostatic Coupling	291
12.7.2	Engineering Ferroelectricity at Interfaces	294
12.8	Conclusion and Perspectives	296
13	Titania Thin Films in Biocompatible Metals and Medical Implants	309
	<i>Fabio Variola and Antonio Nanci</i>	
13.1	The Advent of Titanium-Based Materials	309
13.2	Biologically Relevant Physicochemical Properties of Native Titania Thin Films	310
13.3	Strategies for Modification of the Surface Oxide Layer	311
13.3.1	Chemical Methods	312
13.3.1.1	Oxide Growth Models for Oxidative Treatments	313
13.3.1.2	Doping of Oxide Layers with Bioactive Elements	314
13.3.2	Physical Methods	315
13.3.3	Biochemical Functionalization	315
13.4	Biological Surface Science	316
13.5	Biological Response to Surface Oxide Layers	317
13.5.1	Protein Adsorption	317
13.5.2	In Vitro Studies	317
13.5.3	In Vivo and Clinical Studies	319
13.5.4	Antibacterial Capacity	320
13.6	Slow Release Capacity of Nanoporous Titanium Oxide Layers	321
13.7	Conclusion and Perspectives	322
	Acknowledgments	324
14	Oxide Nanowires for New Chemical Sensor Devices	329
	<i>Alberto Vomiero, Elisabetta Comini, and Giorgio Sberveglieri</i>	
14.1	Outline	329
14.2	Introduction	329
14.3	Synthesis	331
14.4	Integration	334
14.5	Metal Oxide Chemical Sensors	335
14.6	Conductometric Sensors	336
14.7	Optical Sensors	340
	Index	345
