

## Contents

**Preface** XIII

**List of Contributors** XXI

### **Part I Self Assembly** 1

- 1 Yoctoliter-Sized Vessels as Potential Biological Models** 3  
*Sheshanath V. Bhosale, Bradley E. Wilman, and Steven J. Langford*
- 1.1 Introduction 3
- 1.2 Cavities on Glass Plates and Gold Surfaces 5
- 1.3 Preparation and Confirmation of Rigid Yoctowell Cavity 6
- 1.3.1 Confirmation of Rigid Gaps 7
- 1.4 Molecular Sorting 7
- 1.5 Yoctowell-Based Molecular Recognition Events 9
- 1.6 Conclusion 11
- Acknowledgments 12
- References 12
- 2 Switchable Host–Guest Interactions of Supramolecular Rings and Cages** 13  
*Guido H. Clever*
- 2.1 Introduction 13
- 2.2 Host–Guest Chemistry 15
- 2.3 Switching in Supramolecular Systems 17
- 2.4 Natural Paragons 19
- 2.5 Types of External Input and Methods for Analysis 20
- 2.5.1 Switchable Host Compounds 21
- 2.5.2 Switchable Guest Compounds 26
- 2.6 Conclusion 33
- References 34

**Part II    NanoMaterials    39**

- 3      Tailored Graphene-Type Molecules by Chemical Synthesis    41**  
*Milan Kivala and Xinliang Feng*
- 3.1      Introduction    41
- 3.2      Synthetic Concepts toward Expanded PAHs – Nanographenes    43
- 3.2.1      Hexabenzocoronenes (HBCs) and Related Systems    43
- 3.2.2      Large PAHs    48
- 3.2.3      Graphene Nanoribbons    55
- 3.2.4      Heteroatom-Containing PAHs    60
- 3.3      Conclusion and Outlook    64
- References    66
- 4      Analyzing the Surface Area Properties of Microporous Materials    71**  
*Abbie Trewin*
- 4.1      Introduction    71
- 4.1.1      Energy    71
- 4.1.2      H<sub>2</sub> Storage    71
- 4.1.3      CO<sub>2</sub> Capture and Sequestration    72
- 4.1.4      Gas Separation    73
- 4.2      Microporous Materials    74
- 4.2.1      Framework Materials    74
- 4.2.2      Network Materials    74
- 4.2.3      Molecular Materials    76
- 4.2.4      Structural Flexibility    79
- 4.3      Porosity    81
- 4.3.1      What Is Porosity?    81
- 4.3.2      Intrinsic versus Extrinsic Porosity    81
- 4.3.3      Measuring Porosity    82
- 4.3.4      Calculated Surface Areas and Simulated Gas Uptakes    83
- 4.3.5      Gas-Diffusion Mechanisms    84
- 4.4      Porous Materials and Calculating Surface Areas    85
- 4.4.1      Framework Materials    85
- 4.4.2      Network Materials    86
- 4.4.3      Molecular Materials    88
- 4.4.4      Molecular Solids with Some Extrinsic Porosity    89
- 4.4.5      Molecular Solids with Intrinsic Porosity    90
- 4.5      Summary    92
- Acknowledgments    92
- References    93
- 5      Nanostructured Materials Based on Core-Substituted Naphthalene Diimides    97**  
*Sheshanath V. Bhosale, Bradley E. Wilman, and Steven J. Langford*
- 5.1      Introduction    97

- 5.2 Synthesis of Novel cNDI Derivatives 99
- 5.3 Electron Transfer 102
- 5.4 Supramolecular Self-Assembly of cNDI 105
- 5.5 Conclusion 110
- Acknowledgments 110
- References 110
- 6 Metal Phosphides: From Chemist's Oddities to Designed Functional Materials 113**
- Sophie Carencu, Matthieu Demange, Cédric Boissière, Clément Sanchez, and Nicolas Mézailles*
- 6.1 Introduction 113
- 6.2 Bulk Metal Phosphides: A Long History 113
- 6.2.1 A New Family of Synthetic Inorganic Materials 113
- 6.2.2 First Set of Applications 114
- 6.2.3 Bulk Metal Phosphides and Today's Applications 114
- 6.3 White Phosphorus for the Low-Temperature Synthesis of Metal Phosphide Nanoparticles 115
- 6.3.1 White Phosphorus as a Low-Temperature Reagent 115
- 6.3.2 Aryl- and Alkyl-Phosphines as "P" Atom Donor in Harsh Conditions for the Synthesis of Metal Phosphide Nanoparticles 115
- 6.3.3 Nickel Phosphide Nanoparticles from P<sub>4</sub> in Stoichiometric and Mild Conditions 116
- 6.3.4 Generalization of the White Phosphorus Nanoscale Route 118
- References 119
- 7 "Artificial Supermolecule": Progress in the Study of II–V Colloidal Semiconductor Nanocrystals 121**
- Shiding Miao, Alexander Eychmüller, and Stephen G. Hickey*
- 7.1 Introduction 121
- 7.2 Optical Properties of II–V Nanocrystals 124
- 7.2.1 Absorption 124
- 7.2.2 Photoluminescence 127
- 7.2.3 Lifetime Measurement 131
- 7.3 Synthesis of II–V Nanocrystals 133
- 7.3.1 Synthesis Methods 133
- 7.3.2 Synthesis of Cd<sub>3</sub>P<sub>2</sub> Nanocrystals 134
- 7.3.2.1 "Hot-Injection" Synthesis 134
- 7.3.2.2 High-Temperature, Gas-Bubbling Synthesis with *Ex Situ*-Produced PH<sub>3</sub> 139
- 7.3.3 Synthesis of Zn<sub>3</sub>P<sub>2</sub> Nanocrystals 140
- 7.3.4 Synthesis of Cd<sub>3</sub>As<sub>2</sub> Nanocrystals 142
- 7.3.5 Summary of the Synthesis of II–V Nanocrystals 143
- 7.4 Conclusions and Outlook 143
- References 146

- 8 Luminescent Dendrimers 155**  
*Giacomo Bergamini*
- 8.1 Introduction 155
- 8.2 Intrinsic Photochemical and Photophysical Properties of Organic Dendrimers 156
- 8.3 Energy Transfer and Energy Upconversion in Multichromophoric Dendrimers 161
- 8.4 Dendrimers as Ligands for Metal Ions 164
- 8.5 Self-Assembly 168
- 8.6 Dendrimers as Photoswitchable Hosts 170
- 8.7 Conclusion and Perspectives 172
- References 173
- 9 Fabrication of Ultramicroporous Silica Membranes for Pervaporation and Gas Separation 177**  
*Vittorio Boffa*
- 9.1 Ultramicroporous Silica Membranes 177
- 9.1.1 Context 177
- 9.1.2 Gas Separation and Pervaporation 177
- 9.1.3 Fabrication 180
- 9.1.4 Microporosity Assessment in Silica Membranes 182
- 9.1.5 Hydrothermal Stability–Instability of Microporous Silica 184
- 9.2  $M_xO_y$ –Silica Membrane 185
- 9.2.1 Fabrication 185
- 9.2.2 Stability, Selectivity, and Reactivity 187
- 9.2.3 Membrane Optimization 193
- 9.3 Hybrid Organic-Silica Membranes 193
- 9.3.1 Fabrication 193
- 9.3.2 “Hydrophobic” Silica Membranes 196
- 9.3.3 Membranes from Bridged Organosilanes 197
- 9.3.4 Organic-Silica Membranes for  $CO_2$  Separation 199
- 9.4 Perspectives in the Fabrication and Application of Silica Membranes 200
- References 200
- 10 New Directions in the Fight against Cancer: From Metal Complexes to Nanostructured Materials 207**  
*Santiago Gómez-Ruiz*
- 10.1 Introduction 207
- 10.2 Metal Complexes in Cancer Treatment 208
- 10.2.1 Platinum Complexes 208
- 10.2.2 Non-Platinum Transition-Metal Complexes 210
- 10.2.2.1 Group 4 Metal Complexes 211
- 10.2.2.2 Group 8 Metal Complexes 213

- 10.2.2.3 Group 11 Metal Complexes 216
- 10.2.3 Main Group-Metal Complexes 219
  - 10.2.3.1 Gallium Complexes 219
  - 10.2.3.2 Tin Complexes 220
- 10.3 Nanostructured Materials in Cancer Treatments 221
  - 10.3.1 Macromolecular Systems 222
    - 10.3.1.1 Cucurbit[n]urils and Cyclodextrins 222
    - 10.3.1.2 Liposomes and Lipid Nanocapsules 223
    - 10.3.1.3 Other Macromolecular Systems 224
  - 10.3.2 Ceramic Materials 224
    - 10.3.2.1 Nanostructured Calcium-Phosphate-Based Materials Functionalized with Metal Complexes 226
    - 10.3.2.2 Mesoporous Silicas Functionalized with Metal Complexes 227
    - 10.3.2.3 Carbon Nanotubes Functionalized with Metal Complexes 228
  - 10.3.3 Nanoparticles 230
    - References 230

### Part III Molecular Machinery 243

- 11 Molecular Rotors: Imaging Intracellular Viscosity 245**  
*Marina K. Kuimova*
  - 11.1 Introduction 245
  - 11.2 Theoretical Background 246
  - 11.3 Biological Applications of Molecular Rotors 247
    - 11.3.1 Fluorescence-Lifetime-Based Molecular Rotors 249
    - 11.3.2 Time-Resolved Fluorescence Anisotropy Measurements of Molecular Rotors 252
    - 11.3.3 Ratiometric Fluorescent Molecular Rotors 255
    - 11.3.4 Ratiometric Molecular Rotor Measurements of Viscosity during PDT 257
  - 11.4 Conclusions and Outlook 258
    - Acknowledgments 259
    - References 259
  
- 12 Surface-Functionalized Inorganic Colloidal Nanocrystals in Functional Nanocomposite Materials for Microfabrication 263**  
*Chiara Ingrassio, Marinella Striccoli, Angela Agostiano, and Maria Lucia Curri*
  - 12.1 Introduction 263
  - 12.2 Colloidal Nanocrystals: Properties, Synthesis, and Surface Functionalization 264
    - 12.2.1 Properties of Nanocrystals 264
    - 12.2.2 Colloidal Synthesis of Nanocrystals 265
    - 12.2.3 Surface Functionalization of Nanocrystals 266
  - 12.3 NC-Based Nanocomposites for Microfabrication 269

12.4	Conclusions and Future Perspectives	279
	References	280
<b>13</b>	<b>Fluorescence Sensing of Temperature and Oxygen with Fullerenes</b>	<b>285</b>
	<i>Mário N. Berberan-Santos and Carlos Baleizão</i>	
13.1	Introduction	285
13.2	Thermally Activated Delayed Fluorescence: Fundamental Aspects	287
13.3	Sensing Applications	292
13.3.1	Oxygen Sensing	293
13.3.1.1	Sub-ppm Oxygen Sensor Based on C <sub>70</sub>	294
13.3.1.2	C <sub>70</sub> in a Dual Sensor System	297
13.3.2	Temperature Sensing	300
13.3.2.1	C <sub>70</sub> Dispersed in Polymer Films	302
13.3.2.2	C <sub>70</sub> Encapsulated in Polymer Nanoparticles	304
13.4	Conclusions and Future Perspectives	307
	Acknowledgments	308

<b>14</b>	<b>Going beyond Glucose Sensing with Boronic Acid Receptors</b>	<b>315</b>
	<i>Alexander Schiller</i>	
14.1	Introduction	315
14.2	Indicator Displacement Assays for the Detection of Sugars	316
14.3	Glucose Sensing with Boronic Acid Receptors	317
14.3.1	Allosteric Indicator Displacement Assay for the Detection of Carbohydrates	318
14.3.2	AIDA Saccharide Sensing System – Boronic-Acid-Appended Benzyl Bipyridinium Salts and a Fluorescent Reporter Dye	319
14.3.3	AIDA Glucose Sensor for Continuous Monitoring	320
14.4	Solution-Phase Sensor Arrays with Boronic-Acid-Appended Bipyridinium Salts	321
14.4.1	Recognition of Neutral Saccharides	322
14.4.2	Recognition of Phosphosugars and Nucleotides	324
14.5	Carbohydrate-Active Enzyme Assays	327
14.6	Boronic-Acid-Appended Bipyridinium Salts at Work – NOVOSIDES	330
14.7	Conclusions and Perspectives	333
	Acknowledgments	334
