Preface XIX

List of Contributors XXI

Part I Fundamental Aspects of Microwave Irradiation in Organic Chemistry 1

1	Microwave–Materials Interactions and Dielectric Properties: from Molecules and Macromolecules to Solids and Colloidal Suspensions	3
	<i>Didier Stuerge</i>	
1.1	Fundamentals of Microwave–Matter Interactions	3
1.1.1	Introduction	4
1.1.1.1	History	4
1.1.1.2	The Electromagnetic Spectrum	7
1.1.1.3	What About Chemistry: Energetic Comments	8
1.1.2	The Complex Dielectric Permittivity	11
1.1.2.1	Effect of Real Part: Polarization and Storage of Electromagnetic Energy	14
1.1.2.2	Effect of Imaginary Part: Dielectric Losses	18
1.1.2.3	Thermal Dependence of the Dielectric Permittivity	26
1.1.2.4	Conduction Losses	28
1.1.2.5	Magnetic Losses	30
1.2	Dielectric Properties and Molecular Behavior	30
1.2.1	Dielectric Properties Within a Complex Plane	30
1.2.1.1	Argand Diagram	30
1.2.1.2	Cole–Cole Model	31
1.2.1.3	Davidson–Cole Model	32
1.2.1.4	Glarum’s Generalization	33
1.2.1.5	Molecules with Two or More Polar Groups	33
1.2.2	Dielectric Properties of Condensed Phases	33
1.2.2.1	Pure Liquids: Water and Alcohols	34
1.2.2.2	Effects of Electrolytes	35
1.2.2.3	Intermolecular Interactions and Complexes	37
1.2.2.4	Intermolecular Interactions and Hydrogen Bonding	38

1.2.2.5	What Is New About Bound Water?	38
1.2.3	Dielectric Properties of Macromolecules and Polymers	40
1.2.3.1	Macromolecules and Polymers	40
1.2.3.2	Highly Functional Inorganic–Polymer Composites	41
1.2.4	Dielectric Properties of Solids and Adsorbed Phases	43
1.2.4.1	Solids and Dipole Relaxation of Defects in Crystals Lattices	43
1.2.4.2	Solids and Adsorbed Phases	44
1.2.5	Dielectric Properties of Interfaces and Colloidal Suspensions	45
1.2.5.1	Interfacial Relaxation and the Maxwell–Wagner Effect	45
1.2.5.2	Colloids	46
1.3	Conclusion	50
	References	51

2 Development and Design of Reactors in Microwave-Assisted Chemistry 57

Bernd Ondruschka, Werner Bonrath, and Didier Stuerge

2.1	Introduction	57
2.2	Basic Concepts for Reactions and Reactors in Organic Synthesis	58
2.3	Methods for Enhancing the Rates of Organic Reactions	59
2.4	Microwave-Assisted Organic Syntheses	61
2.4.1	Microwave Ovens and Reactors – Background	63
2.4.1.1	Applicators, Waveguides, and Cavities	63
2.4.1.2	Single-Mode or Multi-Mode?	64
2.4.1.3	Limits of Domestic Ovens	65
2.4.1.4	Temperature Measurement Limits	65
2.4.1.5	Design Principles of Microwave Applicators	65
2.4.2	Scale-Up of Microwave Cavities	66
2.4.3	Efficiency of Energy and Power	67
2.4.4	Field Homogeneity and Penetration Depth	68
2.4.5	Continuous Tube Reactors	69
2.4.6	MAOS – an Interdisciplinary Field	69
2.5	Commercial Microwave Reactors	70
2.5.1	Market Overview	70
2.5.2	Enterprises' Products	71
2.5.3	SAIREM's Products	74
2.5.3.1	The LABOTRON Series	74
2.5.3.2	The LABOTRON HTE and i-WASP	76
2.5.3.3	The MiniLABOTRON	77
2.5.3.4	The Miniflow	78
2.6	Selected Equipment and Applications	79
2.6.1	Heterogeneous Catalysis	82
2.6.2	Hyphenated Techniques in Combination with Microwaves	83
2.6.2.1	Microwave Oven Cascade	83
2.6.2.2	Photoconversions by Use of Microwave–UV Methods	84
2.6.2.3	Microwaves–Ultrasound	85

2.6.3	Combination of Microwave Irradiation with a Pressure Setup	85
2.6.3.1	The RAMO System	88
2.6.3.2	The Naxagoras Technology Pilot Plant	89
2.6.3.3	Supercritical Microwave Reactor	90
2.6.3.4	The Coconut Reactor	91
2.6.4	Synthesis of Laurydone	92
2.6.5	Industrial Equipment: Batch or Continuous Flow?	93
2.6.5.1	The Turbosphere System	93
2.6.5.2	The Pulsar System	93
2.6.5.3	The Thermostar System	95
2.7	Qualification and Validation of Reactors and Results	96
2.8	Conclusion and the Future	97
	References	98
3	Key Ingredients for Mastery of Chemical Microwave Processes	105
	<i>Didier Stuerger and Pierre Pribetich</i>	
3.1	The Systemic Approach	105
3.2	Thermal Dependence of Dielectric Loss	108
3.2.1	Thermal Dependence of Dielectric Properties	109
3.2.2	Microwave Bistability	110
3.3	Electric Field Effects	111
3.3.1	Penetration and Skin Depths	111
3.3.2	Dimensional Resonances	113
3.4	Loop Modes or Strange Solutions of Maxwell's Equations	114
3.5	Hydrodynamic Aspects	116
3.6	Thermodynamic and Other Effects of Electric Fields	117
3.7	Athermal and Specific Effects of Electric Field	118
3.8	The Thermal Path Effect: Anisothermal Conditions	120
3.9	Hot Spots and Heterogeneous Kinetics	122
3.10	Conclusion	123
	References	124
4	Nonthermal Effects of Microwaves in Organic Synthesis	127
	<i>Lawrence Perreux, André Loupy, and Alain Petit</i>	
4.1	Introduction	127
4.2	Origin of Microwave Effects	128
4.3	Specific Nonthermal Microwave Effects	130
4.4	Effects of the Medium	134
4.4.1	Polar Solvents	134
4.4.2	Nonpolar Solvents	136
4.4.3	Solvent-Free Reactions	138
4.5	Effects Depending on Reaction Mechanisms	140
4.5.1	Isopolar Transition-State Reactions	141
4.5.2	Bimolecular Reactions Between Neutral Reactants Leading to Charged Products	144

4.5.3	Anionic Bimolecular Reactions Involving Neutral Electrophiles	145
4.5.4	Unimolecular Reactions	146
4.6	Effects Depending on the Position of the Transition State Along the Reaction coordinate	146
4.7	Effects on Selectivity	147
4.8	Some Illustrative Examples	150
4.8.1	Bimolecular Reactions Between Neutral Reactants	151
4.8.1.1	Nucleophilic Additions to Carbonyl Compounds	151
4.8.1.2	Michael Additions	164
4.8.1.3	S _N 2 Reactions	166
4.8.1.4	Aromatic and Vinylic Nucleophilic Substitutions	172
4.8.1.5	Solvent-Free Synthesis of New Oxoazetidines	174
4.8.2	Bimolecular Reactions with One Charged Reactant	175
4.8.2.1	Anionic S _N 2 Reactions Involving Charge-Localized Anions	175
4.8.2.2	Anionic S _N 2 Reactions Involving Charge-Delocalized Anions	180
4.8.2.3	Nucleophilic Additions to Carbonyl Compounds	182
4.8.2.4	Reactions Involving Positively Charged Reactants	185
4.8.3	Unimolecular Reactions	188
4.8.3.1	Imidization Reaction of a Polyamic Acid	188
4.8.3.2	Cyclization Reactions	189
4.8.3.3	Intramolecular Nucleophilic Aromatic Substitution	190
4.8.3.4	Intramolecular Michael Additions	191
4.8.3.5	Deprotection of Allyl Esters	192
4.8.3.6	Synthesis of Pyrido-Fused Ring Systems	193
4.8.3.7	Ring-Closing Alkene Metathesis	193
4.8.4	Some Illustrative Examples of the Effects on Selectivity	194
4.8.4.1	Benzylation of 2-Pyridone	194
4.8.4.2	Addition of Vinylpyrazoles to Imine Systems	194
4.8.4.3	Stereo Control of β -Lactam Formation	195
4.8.4.4	Cycloaddition to C ₇₀ Fullerene	195
4.8.4.5	Selective Alkylation of 1,2,4-Triazole	196
4.8.4.6	Rearrangement of Ammonium Ylides	197
4.9	Concerning the Absence of Microwave Effects	198
4.10	Conclusion: Suitable Conditions for Observation of Specific MW Effects	199
	References	200
5	Selectivity Modifications Under Microwave Irradiation	209
	<i>Ángel Díaz-Ortiz, Antonio de la Hoz, José Ramón Carrillo, and María Antonia Herrero</i>	
5.1	Introduction	209
5.2	Selective Heating	210
5.2.1	Solvents	210
5.2.2	Catalysts	211
5.2.3	Reagents; Molecular Radiators	214

5.2.4	Susceptors	215
5.3	Modification of Chemoselectivity and Regioselectivity	218
5.3.1	Protection and Deprotection of Alcohols	218
5.3.1.1	Electrophilic Aromatic Substitution	219
5.3.2	Synthesis and Reactivity of Heterocyclic Compounds	221
5.3.2.1	Cycloaddition Reactions	225
5.3.2.2	Polymerization	228
5.3.2.3	Miscellaneous	230
5.4	Modification of Stereo- and Enantioselectivity	234
5.5	Conclusion	240
	Acknowledgments	240
	References	240
6	Elucidation of Microwave Effects: Methods, Theories, and Predictive Models	245
	<i>Antonio de la Hoz, Ángel Díaz-Ortiz, María Victoria Gómez, Pilar Prieto, and Ana Sánchez Migallón</i>	
6.1	Introduction	245
6.2	Thermal Effects	246
6.2.1	Elimination of Wall Effects Caused by Inverted Temperature Gradients	246
6.2.2	Overheating	247
6.2.3	“Hot Spots”: Inhomogeneities	249
6.3	Non-Thermal Effects	256
6.3.1	Reactions and Theories	257
6.3.1.1	Photochemistry. Triplet State	257
6.3.1.2	Radical Reactions	258
6.3.1.3	Polymerization Reactions	258
6.3.1.4	Enzymes and Natural Products	264
6.3.1.5	Heterogeneous Reactions. Diffusion	266
6.3.2	Methods to Elucidate the Occurrence of Non-Thermal Microwave Effects	271
6.3.2.1	Microwave Irradiation with Simultaneous Cooling	271
6.3.2.2	Development of Mixed Reactors	274
6.3.2.3	Use of Silicon Carbide Vessels	277
6.3.2.4	Reactions at 1 GHz	279
6.3.2.5	Raman Spectroscopy	279
6.3.2.6	Conductivity Measurements	280
6.3.2.7	Computational Calculations	281
6.4	Conclusion	291
	Acknowledgments	291

7	Microwave Susceptors 297
	<i>Thierry Besson and C. Oliver Kappe</i>
7.1	Introduction 297
7.2	Graphite as a Sensitizer 299
7.2.1	Diels–Alder Reactions 299
7.2.2	Ene Reactions 304
7.2.3	Oxidation of Propan-2-ol 305
7.2.4	Thermolysis of Esters 306
7.2.5	Thermal Reactions in Heterocyclic Syntheses 307
7.2.5.1	Synthesis of Quinazolines and Derivatives 308
7.2.5.2	Benzothiazoles and Derivatives 310
7.2.5.3	Synthesis of 2 <i>H</i> -Benzopyrans (Coumarins) 312
7.2.6	Decomplexation of Metal Complexes 313
7.2.7	Redistribution Reactions Between Tetraalkyl- or Tetraarylgermanes and Germanium Tetrahalides 314
7.2.8	Pyrolysis of Urea 315
7.2.9	Esterification of Stearic Acid by <i>n</i> -Butanol 316
7.3	Graphite as Sensitizer and Catalyst 316
7.3.1	Analysis of Two Synthetic Commercial Graphites 317
7.3.2	Acylation of Aromatic Compounds 318
7.3.3	Acylation of Ethers 322
7.3.4	Ketodecarboxylation of Carboxylic Diacids 323
7.4	The Use of Silicon Carbide Susceptors in Microwave Chemistry 326
7.4.1	Silicon Carbide as Passive Heating Element 326
7.4.2	Silicon Carbide Reaction Vessels 332
7.4.3	Microtiter Plates Made from Silicon Carbide 337

Part II Applications of Microwave Irradiation 425

- 10 Organic Synthesis Using Microwaves and Supported Reagents 427**
Rajender S. Varma and R.B. Nasir Baig
- 10.1 Introduction 427
- 10.2 Microwave-Accelerated Solvent-Free Organic Reactions 428
- 10.3 Protection–Deprotection Reactions 429
 - 10.3.1 Formation of Acetals and Dioxolanes 429
 - 10.3.2 *N*-Alkylation Reactions 430
 - 10.3.3 Deacylation Reactions 431
 - 10.3.4 Cleavage of Aldehyde Diacetates 431
 - 10.3.5 Cleavage of Carboxylic Esters on a Solid Support 432
 - 10.3.6 Selective Cleavage of the *N*-tert-Butoxycarbonyl Group 433
 - 10.3.7 Desilylation Reactions 433
 - 10.3.8 Dethioacetalization Reaction 434
 - 10.3.9 Deoximation Reactions 435
 - 10.3.10 Cleavage of Semicarbazones and Phenylhydrazones 436
 - 10.3.11 Dethiocarbonylation 437
 - 10.3.12 Cleavage of Methoxyphenyl Methyl and Tetrahydropyranyl Ethers 437
- 10.4 Condensation Reactions 438
 - 10.4.1 Wittig Olefination Reactions 438
 - 10.4.2 Knoevenagel Condensation Reactions – Synthesis of Coumarins 439
 - 10.4.3 Synthesis of Imines, Enamines, Nitroalkenes, and *N*-Sulfonylimines 439
 - 10.4.4 MW-Assisted Michael Addition Reactions 443
 - 10.4.5 MW-Assisted Solid Mineral-Promoted Miscellaneous Condensation Reaction 444
- 10.5 Isomerization and Rearrangement Reactions 445
 - 10.5.1 Eugenol–Isoeugenol Isomerization 446
 - 10.5.2 Pinacol–Pinacolone Rearrangement 446
 - 10.5.3 Beckmann Rearrangement 447
 - 10.5.4 Claisen Rearrangement 447
- 10.6 Diels–Alder Cycloaddition of a Triazole Ring 448

- 10.7 Addition Reactions 448
- 10.8 Oxidation Reactions – Oxidation of Alcohols and Sulfides 448
 - 10.8.1 Activated Manganese Dioxide–Silica 449
 - 10.8.2 Chromium Trioxide–Wet Alumina 449
 - 10.8.3 Selective Solvent-Free Oxidation with Clayfen 450
 - 10.8.4 Oxidations with Claycop–Hydrogen Peroxide 451
 - 10.8.5 Other Metallic Oxidants: Copper Sulfate–or Oxone–Alumina 451
 - 10.8.6 Nonmetallic Oxidants: Iodobenzene Diacetate Impregnated on Alumina 452
 - 10.8.7 Oxidation of Thiols to Disulfides 452
 - 10.8.8 Oxidation of Sulfides to Sulfoxides and Sulfones: Sodium Periodate–Silica 453
 - 10.8.9 Oxidation of Sulfides to Sulfoxides: Iodobenzene Diacetate–Alumina 453
 - 10.8.10 Oxidation of Arenes and Enamines: Potassium Permanganate–Alumina 454
 - 10.8.11 Oxidation Using [Hydroxyl(tosyloxy)iodo]benzene 454
 - 10.8.12 Other Oxidation Reactions 455
- 10.9 Reduction Reactions 455
 - 10.9.1 Reduction of Carbonyl Compounds with Aluminum Alkoxides 455
 - 10.9.2 Reduction of Carbonyl Compounds to Alcohols: Sodium Borohydride–Alumina 456
 - 10.9.3 Reductive Amination of Carbonyl Compounds 457
 - 10.9.4 Solid-State Cannizzaro Reaction 458
 - 10.9.5 Reduction of Aromatic Nitro Compounds to Amines with Alumina-Supported Hydrazine 458
- 10.10 Synthesis of Heterocyclic Compounds 459
 - 10.10.1 Flavones 459
 - 10.10.1.1 2-Amino Substituted Isoflav-3-enes 460
 - 10.10.2 Synthesis of Isobenzofuran-1(3*H*)-ones 460
 - 10.10.3 Substituted Thiazoles, Benzothiazepines, and Thiiranes 461
 - 10.10.4 Synthesis of 1,3,4-Thiadiazoles 462
 - 10.10.5 Synthesis of 2-Aroylbenzofurans 463
 - 10.10.6 Synthesis of Quinolones and Other Nitrogen Heterocycles 463
 - 10.10.7 Synthesis of 1,3,4-Oxadiazoles 466
 - 10.10.8 Solvent-Free Assembly of Pyrido-Fused Ring Systems 466
 - 10.10.9 Synthesis of Uracils 467
 - 10.10.10 MW-Assisted Synthesis of Benzoxazinones 467
 - 10.10.11 Multicomponent Reactions 468
- 10.11 Miscellaneous Reactions 471
 - 10.11.1 Conversion of Arylaldehydes to Nitriles 471
 - 10.11.2 Nitration of Styrenes – Preparation of β -Nitrostyrenes 471
 - 10.11.3 Bromination of Alkanones Using Microwaves 472
 - 10.11.4 MW-Assisted Elimination Reactions 472
 - 10.11.5 Synthesis of *N*-Arylsulfonylimines 473

10.11.6	Synthesis of β -Amino Alcohols	473
10.11.7	N-Formylation of Amines	473
10.11.8	Organometallic Reactions (Carbon–Carbon Bond-Forming Reactions)	474
10.11.9	Synthesis of Radiolabeled Compounds – Exchange Reactions	475
10.11.10	Enzyme-Catalyzed Reactions	476
10.11.11	Solvent-Free Synthesis of Ionic Liquids	476

- 14.3.2 Performance in Flow-Through Photoreactors 585
- 14.3.2.1 Flow-Through Photoreactors with Internal Classical UV Lamp (Type B1) 586
- 14.3.2.2 Annular Flow-Through Photoreactors with Internal EDL (Type B2) 586
- 14.3.2.3 Cylindrical Flow-Through Photoreactors Surrounded with EDL (Type B3) 586
- 14.3.2.4 Mixed Flow-Through Photoreactors with Internal EDL (Type B4) 587

14.4	Interactions of UV/Vis and Microwave Radiation with Matter	589
14.5	Microwave Photochemistry and Photocatalysis	591
14.6	Applications	591
14.6.1	Analytical Applications	591
14.6.2	Environmental Applications	591
14.6.3	Other Applications	597
14.7	Future Trends	598
	Acknowledgments	598
	References	598

Contents to Volume 2

Preface XV

List of Contributors XVII

15	Microwave-Heated Transition Metal-Catalyzed Coupling Reactions	607
	<i>Francesco Russo, Luke R. Odell, Kristofer Olofsson, Peter Nilsson, and Mats Larhed</i>	
16	Microwaves in Heterocyclic Chemistry	673
	<i>Jean Pierre Bazureau, Ludovic Paquin, Daniel Carrié, Jean Martial L'Helgoual'ch, Soléne Guihéneuf, Karime Wacothon Coulibaly, Guillaume Burgy, Sarah Komaty, and Emmanuelle Limanton</i>	
17	Microwave-Assisted Cycloaddition Reactions	737
	<i>Khalid Bougrin and Rachid Benhida</i>	
18	Microwave-Assisted Heterogeneously Catalyzed Processes	811
	<i>Rafael Luque, Alina Mariana Balu, and Duncan J. Macquarrie</i>	
19	Microwaves in the Synthesis of Natural Products	843
	<i>Erik V. Van der Eycken, Jitender B. Bariwal, and Jalpa J. Bariwal</i>	
20	Microwave-Enhanced Synthesis of Peptides, Proteins, and Peptidomimetics	897
	<i>Jonathan M. Collins</i>	
21	A Journey into Recent Microwave-Assisted Carbohydrate Chemistry	961
	<i>Antonino Corsaro, Venerando Pistarà, Maria Assunta Chiacchio, and Giovanni Romeo</i>	

- 22** **Polymer Chemistry Under Microwave Irradiation** 1013
Dariusz Bogdal and Urszula Pisarek
- 23** **Application of Microwave Irradiation in Carbon Nanostructures** 1059
Fernando Langa and Pilar de la Cruz
- 24** **Microwave-Assisted Multicomponent Reactions in the Synthesis of Heterocycles** 1099
Art Kruithof, Eelco Ruijter, and Romano V.A. Orru
- 25** **Microwave-Assisted Continuous Flow Organic Synthesis (MACOS)** 1173
Jesus Alcázar and Juan de M. Muñoz
- Index** 1205
