Preface XIX

1	Water – Substance of Life	1
1.1	Water as a Natural Resource	1
1.2	Physical and Chemical Properties of Water	2
1.2.1	The Water Molecule	2
1.2.2	Physical Properties	3
1.2.3	Chemical Properties	5
1.3	Significance of Water for Energy Conversion	6
1.4	General Terminology	7
	Further Reading	8
2	Thermodynamic Terms and Definitions	9
2.1	Terms in Humidity Measurement	9
2.1.1	Description of the Gas Water Vapor Pressure	10
2.1.2	Gas Temperature Definitions	12
2.1.3	The Psychrometric Equation	14
2.1.4	Definitions of Parameters Expressed in Amounts of Substance, Concentrations, and Ratios	16
2.1.5	Additional Terms and Definitions	21
2.2	Terms in Moisture Measurement in Solid and Liquid Materials	25
2.2.1	Types of Water Bonds in Solids and Liquids	25
2.2.1.1	Water in Solids	25
2.2.1.2	Water in Liquids	26
2.2.1.3	Surface Pores, Gradation, and Capillaries	27
2.2.2	Terms and Definitions of Moisture Measurement Parameters in Solids	27
2.2.3	Gas Humidity and Moisture in Solids	30
2.2.4	Terms and Definitions of Drying Process Parameters	33
2.2.5	Additional Terms and Definitions	34
2.3	Terms and Definitions in Measurement and Controlling Technology	35
2.3.1	Description of Sensors in Monitoring and Control Technology	36

2.3.2	Terms used in Control	41
2.3.3	Sensor Parameters	43
2.3.4	Measurement Uncertainty	44
	References	46
	Further Reading	46
3	Water in Solid, Liquid, and Gaseous Materials	47
3.1	Specialties of Solid and Liquid Materials	48
3.2	Contact and Noncontact Measurement Methods	50
3.3	Bonding Types of Water in Solid and Liquid Materials	52
3.4	Analogy Models	53
	References	55
	Further Reading	55
4	Moisture and Humidity Measurement Methods in Solid, Liquid, and Gaseous Substances	57
4.1	Introduction	57
4.2	Measurement of Electrical and Magnetic Properties	58
4.2.1	Measurement Principle	60
4.2.2	Low-Frequency Method	62
4.2.2.1	Measurement Principle	62
4.2.2.2	Technical Implementation	62
4.2.3	High-Frequency Method	64
4.2.3.1	Measurement Principle	64
4.2.3.2	Technical Implementation	66
4.2.4	Microwave Method	70
4.2.4.1	Measurement Principle	70
4.2.4.2	Technical Implementation	70
4.2.5	Radar Method	72
4.2.5.1	Measurement Principle	72
4.2.5.2	Technical Implementation	72
4.2.5.3	Specialties	73
4.3	Measurement of Water Vapor Pressure in Gases	73
4.3.1	Metal Oxide Sensors	73
4.3.1.1	Physical Principle	73
4.3.1.2	Technical Implementation	74
4.3.1.3	Principal Application	75
4.3.2	Quartz Microbalance	75
4.3.2.1	Physical Principle	75
4.3.2.2	Technical Implementation	75
4.3.2.3	Principal Application	76
4.3.3	Psychrometer	76
4.3.3.1	Physical Principle	77
4.3.3.2	Technical Implementation	77
4.3.3.3	Mathematical Description of Psychrometers	80

4.3.4	Capacitive Polymer Sensors	80
4.3.4.1	Physical Principle	80
4.3.4.2	Technical Implementation	81
4.3.4.3	Specialties	84
4.3.5	Dew Point Mirror	86
4.3.5.1	Physical Principle	86
4.3.5.2	Technical Implementation	86
4.3.6	Zirconium Oxide Devices	92
4.3.6.1	Technical Implementation	94
4.3.7	Measurements Based on Geometric Changes of Natural and Artificial Materials	95
4.3.7.1	Physical Principle	95
4.3.7.2	Technical Implementation	95
4.3.7.3	Technical Implementation of Hygrometers with Size-Varying Material	97
4.3.8	Resistive Sensors	98
4.3.8.1	Physical Principle	98
4.3.8.2	Technical Implementation	99
4.4	Water Content Measurements Using Chemical Methods	101
4.4.1	Coulometric Measurement	101
4.4.1.1	Measurement Principle	101
4.4.1.2	Technical Implementation	102
4.4.1.3	Specialties	104
4.4.2	Calcium Carbide	106
4.4.2.1	Measurement Principle	106
4.4.2.2	Technical Implementation	106
4.4.3	Calcium Hydride	108
4.4.3.1	Measurement Principle	108
4.4.3.2	Technical Implementation	109
4.4.4	Karl Fischer Titration	109
4.4.4.1	Principle	109
4.4.4.2	Technical Implementation	110
4.4.4.3	Applications	110
4.4.5	Humidity Indicator	112
4.4.5.1	Principle	112
4.4.5.2	Technical Realization	112
4.4.5.3	Applications	114
4.5	Measurement of the Optical Properties of Water and Water Vapor	114
4.5.1	Measurements in the Infrared Spectral Range	116
4.5.1.1	Physical Principle	116
4.5.1.2	Technical Implementation	117
4.5.1.3	Measurement in Liquids	123
4.5.1.4	Measurement in Opaque Materials	123
4.5.2	Measurement in the UV Range	124
4.5.2.1	Technical Implementation	125

4.5.3	Measurement with Optical Fibers	127
4.5.3.1	Physical Principle	127
4.5.3.2	Technical Implementation	127
4.5.4	Measurement of Mie Scattering by Water Droplets	129
4.5.4.1	Physical Principle	129
4.5.4.2	Technical Implementation	131
4.5.5	Holographic Measurement of Water Droplets	131
4.5.5.1	Physical Principle	131
4.5.5.2	Digital Holography	132
4.5.5.3	Technical Implementation	133
4.6	Measurement of Acoustic Properties of Water Vapor	134
4.6.1	Physical Principle	134
4.6.2	Technical Implementation	134
4.7	Measurement of Suction Pressure in Solid Materials	136
4.7.1	Tensiometry	136
4.7.1.1	Physical Principle	136
4.7.1.2	Technical Implementation	137
4.7.2	Gypsum Block Method	139
4.7.2.1	Physical Principle	139
4.7.2.2	Technical Implementation	139
4.7.2.3	Special Designs	140
4.8	Measurement of Nuclear Properties of Water	141
4.8.1	Neutron Measurement	141
4.8.1.1	Physical Principle	141
4.8.1.2	Technical Implementation	141
4.8.2	Devices Based on Gamma Radiation	142
4.8.2.1	Physical Principle	142
4.8.2.2	Technical Implementation	142
4.9	Nuclear Magnetic Resonance Spectroscopy	143
4.9.1	Physical Principle	143
4.9.2	Technical Implementation	144
4.10	Thermogravimetry	145
4.10.1	Physical Principle	145
4.10.2	Technical Implementation	146
4.10.2.1	Heat Sources	147
4.10.2.2	Drying with Desiccants	148
4.10.2.3	Oven Drying Method	149
4.11	Measurement of the Thermal Properties of Solids	150
4.11.1	Physical Principle	150
4.11.2	Technical Implementation	151
4.11.3	Measurement of Water Movement	151
4.11.4	Moisture Measurement in Insulating Materials	153
4.12	Nanostructured Measurement Devices	154
4.12.1	Contact Methods	154
4.12.2	Noncontact Methods	155

4.12.3	Nanometrology	156
	References	156
	Further Reading	158
5	Selection of a Measurement Method	161
5.1	Assessment of the Measurement Task	161
5.1.1	Defining the Goal of a Measurement	161
5.1.2	Conditions at the Measurement Location	163
5.2	Evaluation of Different Measurement Methods	164
5.2.1	Selection Strategies	164
5.2.2	Evaluation According to the Application	165
5.2.2.1	Other Moisture and Humidity Measurement Methods	167
5.3	Selection of Hardware	168
5.3.1	Comparison of Measurement Equipment	168
5.3.2	Cost Calculation	168
5.3.3	Determining Material-Specific Parameters	169
5.3.3.1	Laboratory Measurements	169
5.3.3.2	Measurement Under Real Production Conditions	170
	Further Reading	171
6	Reliability and Traceability of Measurements	173
6.1	Metrological Terminology	174
6.1.1	Measurand	174
6.1.2	Accuracy	175
6.1.3	Precision	175
6.1.4	Reproducibility	175
6.1.5	Repeatability	176
6.1.6	Systematic Error	176
6.1.7	Random Error	176
6.1.8	Measurement Uncertainty	176
6.1.9	Calibration	177
6.1.10	Adjustment	178
6.1.11	Measurement Standard (Etalon)	178
6.1.12	Reference Standard	178
6.1.13	Reference Material	178
6.1.14	Industrial Standard	178
6.2	Moisture and Humidity Metrology	179
6.2.1	Calibration Case Studies	179
6.3	Typical Terms in Industrial Applications	180
	References	181
7	Moisture Measurement in Meteorology, Agriculture, and the Environment	183
7.1	Agriculture and Horticulture	183
7.1.1	Water Content in Soil and Agricultural Substrates	183

7.1.1.1	Bonding of Water in Soil Substrate	183
7.1.1.2	Measurement of Soil Moisture	184
7.1.2	Moisture in Agricultural Products	188
7.1.2.1	Grain	188
7.1.3	Climate Control Equipment in Agriculture and Horticulture	190
7.1.4	Wetting and Dewing of Fruits and Leaves	190
7.1.4.1	Wetting of Plantations	191
7.1.4.2	Wetting Measurement Directly at the Plant	195
7.1.5	Measurement of Product Freshness	196
7.2	Waste Management	199
7.2.1	Measurement in Recycling Products	199
7.2.1.1	Moisture in Biofilters	199
7.2.1.2	Moisture in Compost	200
7.2.2	Moisture Measurement in Incinerator Flue Gas	202
7.2.2.1	Techniques for Dew Point Measurement in Acids	203
7.3	Measurement of Weather Conditions	207
7.3.1	Electronic Recording Devices for Outdoor Climate Measurements	208
7.3.1.1	Measurement of Snow Moisture	208
7.3.2	Meteorological Stations for Specialized Applications	209
7.3.3	Evaluation of Road Conditions	210
7.3.3.1	Road Conditions in Winter	212
7.3.3.2	Measurement of Relevant Road Condition Parameters	213
7.3.4	Humidity Measurement at High Altitude	216
7.3.4.1	Airplane Equipment for Humidity Measurement	216
7.3.4.2	High-Altitude Humidity Measurement from the Ground	217
	References	217
	Further Reading	217
8	Applications in the Food and Beverage Industry	219
8.1	Water Activity Measurement	219
8.1.1	Water Activity as a Parameter in the Food Industry	219
8.1.2	Water Activity Measurement	221
8.1.2.1	Static Water Activity Measurement	222
8.1.2.2	Dynamic Water Activity Measurement	224
8.1.2.3	Cryostatic a_w Measurement	225
8.1.3	Sorption Isotherms	226
8.1.3.1	Measurement of Sorption Isotherms	229
8.1.3.2	Surface Water	230
8.1.4	Reference Methods	231
8.2	Food Processing	232
8.2.1	Moisture Measurement in Meat and Sausage Products	232
8.2.1.1	Evaluation of Measurement Methods	233
8.2.1.2	Product Monitoring	233
8.2.2	Production Control	235
8.2.2.1	Inspection of Incoming Goods	235

8.2.2.2	Influence of the Ambient Climate	236
8.2.2.3	Moisture Measurement During Particular Stages of Processing	238
8.3	Monitoring and Control of Production Stages in the Food Industry	242
8.3.1	Moisture Measurement and Control During Coffee Production	243
8.3.1.1	Coffee Roasting	243
8.3.1.2	Interim Storage in a Silo	244
8.3.1.3	Milling Process	245
8.3.1.4	Packaging Process	246
8.3.2	Moisture Measurement During Smoking and Baking Processes	248
8.3.2.1	Specialties	248
8.3.2.2	Monitoring of Baking Parameters	249
8.4	Storage and Transport of Food	251
8.4.1	Storage Conditions	251
8.4.1.1	Characterization of Storage Conditions for Different Food Products	251
8.4.1.2	Large Warehouses	252
8.4.1.3	Energy-Efficient Storage	252
8.4.2	Special Climate Conditions	254
8.4.2.1	Maturation of Cheese and Meat	254
8.4.2.2	Controlled and Modified Atmosphere	255
8.4.2.3	Controlling Humidity during Sea and Land Transport	256
8.4.2.4	Humidity Measurement in Packaging	257
	References	259
	Further Reading	259
9	Moisture and Humidity Measurement in Industrial Plants	261
9.1	Humidity Measurement Under Extreme Conditions	261
9.1.1	Measurement at High Temperatures	261
9.1.1.1	Humidity Measurement at High Temperatures (Up to 200°C)	262
9.1.1.2	Humidity Measurement at Extremely High Temperatures (Above 300°C)	263
9.1.1.3	Sensor Installation and Sampling	266
9.1.2	Aggressive Components in the Gas Flow	270
9.1.2.1	Systems with Self-Monitoring and Sensor Checks for Inline Trace Humidity Measurement	270
9.1.2.2	Measurement in Corrosive or Highly Contaminated Environments	272
9.1.2.3	Detection of Leakages in Cooling Systems	273
9.1.3	Measurement at High Pressure	276
9.2	Moisture Measurement During Running Production Processes	277
9.2.1	Continuous Measurement in Silos, Pipes, and on Conveyor Belts	277
9.2.1.1	Guidelines for the Selection of a Measurement Method	277
9.2.1.2	Cross-Sensitivities and Compensation During Measurement	279
9.2.1.3	Measurement in Pipes	282

9.2.2	Determination of Residual Moisture at the Inner Walls of Hoses and Tubes	284
9.2.2.1	Measurement Methods	284
9.2.2.2	Measurement Station for the Determination of Residual Water in Tubes	288
9.2.3	Water Content Measurement in Coarse Materials	291
9.2.3.1	Sample Extraction Systems for Bulk Materials	291
9.2.3.2	Moisture Measurement in Coal and Ore	292
9.2.3.3	Control of Mixing Processes	293
9.3	Moisture Measurement in the Automotive and Aircraft Construction Industries	294
9.3.1	Measurement in Oil and Fuel Systems	294
9.3.2	Automotive Components Made from Renewable Raw Materials and Plastics	295
9.3.3	Measurement in Fast-Moving Gases During Injection and Ignition Processes	297
9.3.3.1	Calibration of the Measurement Setup	299
9.3.4	Detection of Moisture in Insulation Layers	301
9.3.4.1	Tightness Tests	301
9.4	Moisture and Humidity Measurement in Electrical Engineering, Electronics, and Optics	302
9.4.1	Trace Humidity Measurement in Electronic Components	302
9.4.2	Monitoring of Transformers and Switching Stations	304
9.4.3	Switch Stations	305
9.4.3.1	Suppression of Condensation Inside Switch Stations	305
	Reference	306
	Further Reading	306

10 Applications in the Chemical, Pharmaceutical, and Plastics Industries 307

10.1	Moisture Measurement in Plastic Granules and Powders	307
10.1.1	Detection of Low Water Content in the Laboratory	307
10.1.1.1	Karl Fischer Titrator	307
10.1.1.2	Gas Chromatography	307
10.1.1.3	Thermogravimetry	308
10.1.1.4	Combined Methods	308
10.1.1.5	Calcium Hydride Method	309
10.1.2	Inline Measurement of Powders and Granules with Low Moisture Content	310
10.1.2.1	Equilibrium Relative Humidity (ERH)	310
10.1.2.2	Quasi-Continuous Measurement	310
10.1.3	Inline Measurement of Powders and Granules in the High Moisture Range	311
10.1.3.1	Selection of a Measurement Method	311
10.1.3.2	Determination of Cross-Sensitivities	316

10.2	Drying of Solid Materials	318
10.2.1	Goals of Drying	318
10.2.2	Principles of Drying	318
10.2.2.1	Thermal Drying	320
10.2.2.2	Vacuum Drying	321
10.2.2.3	Freeze-Drying	321
10.2.2.4	Chemical Drying	321
10.2.2.5	Selection of a Drying Principle	322
10.2.3	Monitoring and Control of Drying Processes	322
10.3	Storage of Moisture-Sensitive Products	324
10.3.1	Monitoring of Warehouses and Manufacturing Facilities	324
10.3.2	Storage of Samples in a Dry Environment	325
10.3.2.1	Desiccants	325
10.3.2.2	Membrane Dryers	328
10.4	Inline Measurement in Nonaqueous Fluids	330
10.4.1	Sensor Modifications	330
10.4.2	Moisture Measurement in Oil and Fuel	335
	References	336
	Further Reading	336
11	Applications in the Manufacture and Processing of Paper and Textiles	337
11.1	Random Test Measurements and Inspection of Goods	337
11.1.1	Paper Properties and the Climate of the Surrounding Environment	337
11.1.2	Influence of Moisture on Paper Properties	339
11.1.3	Quality Control by Random Test Measurements	341
11.1.3.1	Nonmoving Goods	341
11.1.3.2	Moving Goods	343
11.1.3.3	Laboratory Measurements	344
11.2	Continuous Measurement of Paper and Fabric Webs	346
11.2.1	Moving Cardboard	346
11.2.2	Moisture Measurement on Moving Filaments	350
11.2.3	Film Thickness Measurements of Water–Color Mixture Layers	354
11.3	Storage and Transport of Paper and Textiles	356
11.3.1	Climate Control of Production Facilities and Storerooms	356
11.3.2	Transport of Hygroscopic Materials	357
	References	358
	Further Reading	359
12	Moisture Measurement in the Building Industry	361
12.1	Moisture Measurement in Aggregates	361
12.1.1	Measurement in Silos and on Conveyor Belts	362
12.1.1.1	Measurement Using Neutrons	362
12.1.1.2	Optical Measurement	363

12.1.1.3	High-Frequency Measurement	364
12.1.2	Manufacture of Prefabricated Elements	365
12.1.2.1	Furniture Boards	365
12.1.2.2	Drying and Firing of Building Material	365
12.2	Measurement on Buildings and Brickwork	366
12.2.1	Calcium Carbide Method	368
12.2.2	Thermogravimetry	369
12.2.3	Neutron Measurement	369
12.2.4	Electromagnetic Methods	369
12.2.5	Equilibrium Relative Humidity	371
12.2.6	Measurement of Thermal Properties	373
12.2.6.1	Infrared Thermography	373
12.2.6.2	Measurement of Thermal Conductivity	374
12.2.6.3	Temperature Measurement Using Optical Fibers	374
12.2.7	Other Methods	375
12.2.7.1	Radar Measurement	375
12.2.7.2	Infrared Reflectometry	375
12.2.7.3	Nuclear Magnetic Resonance	375
12.3	Climate Control in Rooms and Buildings	376
12.3.1	Apartments and Workplaces	376
12.3.1.1	Humidity Measurement	376
12.3.2	Museums and Exhibition Showrooms	378
12.3.3	Climate Control in Closed Chambers and Small Rooms	380
12.3.3.1	Air Humidifying	380
12.3.3.2	Dehumidifying of Air	382
12.3.4	Rooms Containing Electrical Systems	382
	Further Reading	384
13	Laboratory-Based Moisture Measurement	385
13.1	Laboratory Measurement Stations for Humidity and Moisture Measurement	385
13.1.1	Climate Chambers	386
13.1.2	Gas Mixing Systems for Trace Humidity Measurement	388
13.1.3	Laboratory Measurement Station for Moisture Measurement	390
13.1.3.1	Measurement Station for Liquid and Solid Materials	390
13.1.3.2	Measurement of Trace Moisture in Solid Materials	393
13.1.4	Measurement Station to Determine the Water Vapor Permeability of Foils	395
13.2	Generation of Gases with a Defined Humidity	396
13.2.1	Humidification and Drying of Gas Flows	396
13.2.1.1	Complete Humidification of a Gas Flow	397
13.2.1.2	Gas Humidification by Permeation	398
13.2.1.3	Humidification by Capillary Diffusion	399
13.2.1.4	Humidification by Continuous Injection	400
13.2.2	Humidity Generators	400

13.2.2.1	Two-Pressure Humidity Generator	401
13.2.2.2	Two-Temperature Humidity Generator	402
13.2.2.3	Gas Mixing Humidity Generator	403
13.2.2.4	Coulometric Humidity Generator	404
13.2.3	Saturated and Unsaturated Solutions	405
13.2.3.1	Saturated Solutions	405
13.2.3.2	Unsaturated Salt Solutions	406
13.2.3.3	Other Solutions	409
13.3	Humidity Measurement in Medical Applications	409
13.3.1	Specialties of Clinical Applications	409
13.3.2	Humidity Measurement in Respiratory Air	410
13.3.2.1	The Respiration Process in Humans	410
13.3.2.2	Self-Regulating Systems for the Humidification of Respiratory Air	412
13.3.2.3	Humidity Measurement in Respiratory Air	413
13.3.3	Humidity Measurement on the Skin	416
13.3.4	Applications in Medical Supply Technology	417
13.3.4.1	Incubator	417
13.3.4.2	Gas Supply System	417
13.3.4.3	Room Climate Control	417
13.3.4.4	Sterilization	418
	References	418
	Further Reading	418
14	Moisture and Humidity Measurement in Space	421
14.1	Model Representations of the Formation and Distribution of Water	421
14.1.1	Interactions between the Surface and the Atmosphere	422
14.1.1.1	Water at Low Temperatures	423
14.1.1.2	Soil Water	425
14.1.1.3	Formation of a Water Cycle	425
14.1.2	Simulation of a Planetary Atmosphere	427
14.2	Measurement Methods in Aerospace	430
14.2.1	Remote Sensing	430
14.2.2	Measurements on Planetary Surfaces	430
14.2.3	Ground-Based Measurement Methods	431
14.2.4	Testing and Calibration of Aerospace Technology in the Laboratory	434
14.3	Requirements for Measurement Equipment in the Aerospace Industry	436
14.3.1	General Climatic Conditions during Operation	436
14.3.2	Technical Requirements of Measurement Equipment	437
14.3.2.1	Integration into the Overall System	437
14.3.2.2	Requirements for Operation	438
14.3.3	Technical Specifications of Selected Sensors for Spaceflight Applications	438

14.3.4	Concept of a Combined Measurement Sensor	443
14.3.4.1	Variation of Measurement Techniques	443
14.3.4.2	Combined Probe for Extraterrestrial Soil Moisture Measurements	445
14.3.5	Combined Probe for Extraterrestrial Atmospheric Humidity Measurements	447

Appendix A: Relevant Units of Thermodynamics 455

A.1	Basic Units of the International System of Units (SI System)	455
A.2	Conversion of Units	456
A.3	Conversion of Units (Material Properties)	457
A.4	Conversion of Units (Thermodynamic)	459

Appendix B: Tables and Diagrams of Thermodynamics 463

B.1	Mollier Diagram	463
B.2	Details of Mollier Diagram	464
B.3	Calculation of Pressure Dew Point	464
B.4	Water Vapor Over Water	465
B.5	Water Vapor Over Ice	465
B.6	Psychrometer Charts	466
B.7	Correlation Between Relative Humidity, Dew Point and Temperature	467

Appendix C: Constants and Parameters 469

C.1	Relevant Constants	469
C.2	Parameters of Dry Air	469
C.3	Parameters of Water, Water Vapor, Ice	470
C.4	Parameter of Carbon Dioxide	471
C.5	Other Parameters	471

Appendix D: Material Parameters 473

D.1	Specific Electric Resistance of Different Materials	473
D.2	Relative Permittivity of Different Insulators	474
D.3	Spectral Lines of Different Chemical Elements	475
D.4	Density of Various Solid Materials	476
D.5	Heat of Evaporation of Different Gases	476
D.6	Cooling Temperature of Common Coolants	477

Appendix E: Water Adsorption in Products 479

E.1	Sorption Isotherm of Wood Fiber	479
E.2	Sorption Isotherm of Grinded Natural Stone	479
E.3	Sorption Isotherm of Soot	480
E.4	Sorption Isotherm of Flour	480
E.5	Sorption Isotherm of Freeze-Dried Coffee Powder	480

E.6	Sorption Isotherm of Milled Coffee Beans	481
E.7	Sorption Isotherm of Paper	481
E.8	Storing Conditions of Fruit and Vegetables	482
E.9	Storing Conditions of Fruit and Vegetables Under Controlled Atmosphere	482
