Preface *xi*

1	Nanogap Electrodes and Molecular Electronic Devices	1
	<i>Tao Li</i>	
1.1	Introduction	1
1.2	Overview of Molecular Electronics	2
1.2.1	Why Molecular Electronics	3
1.2.1.1	History of Computing	3
1.2.1.2	Moore's Law	6
1.2.1.3	Molecular Electronics: A Beyond-CMOS Option	8
1.2.2	Molecular Materials for Organic Electronics	10
1.2.2.1	OLEDs	11
1.2.2.2	OFETs	11
1.2.2.3	OPVs	12
1.2.3	Molecules for Molecular-Scale Electronics	13
1.3	Introduction to Nanogap Electrodes	16
1.4	Summary and Outlook	19
	References	19
2	Electron Transport in Single Molecular Devices	25
	<i>Lei-Lei Nian, Liang Ma, and Jing-Tao Lü</i>	
2.1	Introduction	25
2.2	General Methods	26
2.2.1	Transport Mechanisms	26
2.2.2	Nonequilibrium Green's Function Method	26
2.2.3	Master Equation Method	29
2.3	Single Electron Transport Through Single Molecular Junction	31
2.3.1	Coherent Transport	31
2.3.2	Hopping Transport	32
2.4	Effect of Many-Body Interactions	35
2.4.1	Electron-Vibration Interaction	35

2.4.1.1	Weak Coupling Regime	37
2.4.1.2	Strong-Coupling Regime	40
2.4.2	Electron–Electron Interaction	43
2.4.2.1	Coulomb Blockade	43
2.4.2.2	Kondo Effect	45
2.5	Thermoelectric Transport	48
2.6	First-Principles Simulations of Transport in Molecular Devices	51
2.7	Conclusions	52
	References	52

3 Fabricating Methods and Materials for Nanogap

Electrodes 57

Xianhui Huang, Weiqiang Zhang, Dong Xiang, and Tao Li

3.1	Introduction	57
3.2	Mechanical Controllable Break Junctions	59
3.3	Electrochemical and Chemical Deposition Method	68
3.3.1	Electroplating and Feedback System	68
3.3.2	Chemical Deposition	74
3.4	Oblique Angle Shadow Evaporation	75
3.5	Electromigration and Electrical Breakdown Method	78
3.5.1	Device Fabrication	79
3.5.2	Gap Size Control	82
3.5.3	Electromigration Applications	84
3.6	Molecular Scale Template	89
3.6.1	Molecular Rulers	89
3.6.2	Inorganic Films as Templates	94
3.6.3	On-Wire Lithography	96
3.6.4	Nanowire Mask	100
3.7	Focused Ion Beam	102
3.8	Scanning Probe Lithography and Conducting Probe-Atomic Force Microscopy	108
3.8.1	Destructive Way	108
3.8.2	Constructive Way	111
3.8.3	Conducting Probe-Atomic Force Microscopy	112
3.9	Nanogap Electrodes Prepared with Nonmetallic Materials	113
3.9.1	Introduction	113
3.9.2	Nanogap Electrodes Made from Carbon Materials	114
3.9.2.1	Advantages of Carbon Materials	114
3.9.2.2	Carbon Nanotubes for Nanogap Electrodes	115
3.9.2.3	Graphene	130
3.9.2.4	Silicon Nanogap Electrodes	153
3.9.2.5	Other Materials	171
3.10	Summary and Outlook	174
	References	175

4	Characterization Methods and Analytical Techniques for Nanogap Junction	189
	<i>Baili Li, Ziyang Wang, Bin Han, and Xi Yu</i>	
4.1	Current–Voltage Analysis	189
4.1.1	Coherent Tunneling Transport	190
4.1.2	Transition Voltage Spectroscopy	195
4.1.3	Incoherent Transport	198
4.2	Inelastic Tunneling Spectroscopy (IETS)	206
4.2.1	Principle and Measurement of IETS	206
4.2.2	Selection Rule and Charge Transport Pathway	209
4.2.3	Line Shape of the IETS	214
4.2.4	Application of the IETS	218
4.2.5	Mapping the Charge Transport Pathway in Protein Junction by IETS	219
4.2.6	STM Imaging by IETS	222
4.3	Optical and Optoelectronic Spectroscopy	226
4.4	Concluding Remarks	232
	Appendix	233
	References	234
5	Single-Molecule Electronic Devices	239
	<i>Shengxiong Xiao</i>	
5.1	Introduction	239
5.2	Wiring Molecules into “Gaps”: Anchoring Groups and Assembly Methods	240
5.2.1	Anchor Groups	240
5.2.2	Effect of Anchor–Bridge Orbital Overlaps on Conductance	245
5.2.3	In Situ Chemical Reactions to Produce Covalent Contacts	250
5.3	Electrical Rectifier	252
5.3.1	Rectification Toward Diodes	255
5.3.2	General Mechanisms for Molecular Rectification	256
5.3.2.1	Aviram–Ratner Model	256
5.3.2.2	Kornilovitch–Bratkovsky–Williams Model	257
5.3.2.3	Datta–Paulsson Model	258
5.3.3	Rectification Originated from Molecules	259
5.3.3.1	D– σ –A and D– π –A Systems	259
5.3.3.2	D–A Diblock Molecular System	260
5.3.4	Rectification Stemming from Different Interfacial Coupling	264
5.3.4.1	Different Electrodes	264
5.3.4.2	Anchoring Groups	265
5.3.4.3	Contact Geometry	265
5.3.4.4	Interfacial Distance	266
5.3.5	Additional Molecular Rectifiers	267
5.4	Conductance Switches	269
5.4.1	Voltage Pulse Induced Switches	270

- 5.4.2 Light-Induced Switching 271
- 5.4.3 Switching Triggered by Chemical Process (Redox and pH) 275
- 5.4.4 Spintronics-Based Switch 278
- 5.5 Gating the Transport: Transistor-Like Single-Molecule Devices 282
- 5.5.1 Electrostatic Gate Control 282
- 5.5.2 Side Gating 287
- 5.5.3 Electrochemical Gate Control 288
- 5.5.4 Molecular Quantum Dots 290
- 5.6 Challenges and Outlooks 291
- References 292

6 Molecular Electronic Junctions Based on Self-Assembled Monolayers 301

Yuqing Liu and Zhongming Wei

- 6.1 Introduction 301
- 6.2 Molecular Monolayers for Molecular Electronics Devices 302
- 6.2.1 Monolayers Covalently Bonded to Noble Metals 303
- 6.2.2 Monolayers Attached to Non-metal Substrates 309
- 6.2.3 Langmuir–Blodgett Method 312
- 6.3 Top Electrodes 314
- 6.3.1 Deposited Metal 314
- 6.3.1.1 Direct Evaporation 315
- 6.3.1.2 Indirect Evaporation 316
- 6.3.2 Make Top Contact by Soft Methods 319
- 6.3.2.1 Lift-and-Float Approach 319
- 6.3.2.2 Crosswire Junction 320
- 6.3.2.3 Transfer Printing 322
- 6.3.2.4 Graphene as Top Electrode 323
- 6.3.2.5 Liquid Metal Contact 326
- 6.4 Experimental Progress with Ensemble Molecular Junctions 329
- 6.5 Outlook 334
- References 335

7 Toward Devices and Applications 345

Ajuan Cui and Kasper Nørgaard

- 7.1 Introduction 345
- 7.2 Major Issues: Reliability and Robustness 346
- 7.2.1 Single Molecular Device 347
- 7.2.1.1 Top-Contact Junctions 347
- 7.2.1.2 Planar Metallic Nanogap Electrodes 347
- 7.2.1.3 Planar Nanogap Electrodes Based on Single Walled Carbon Nanotubes (SWCNTs) or Graphene 349
- 7.2.1.4 The Absorption of Molecule on the Surface of SWCNTs or Graphene 350
- 7.2.2 Molecular Device Based on Molecule Monolayer 351

7.2.2.1	Bottom Electrodes	353
7.2.2.2	Insulating Layer with Holes to Define the Size of the Bottom Electrodes	353
7.2.2.3	Molecule Monolayer Formation	354
7.2.2.4	Top Electrodes	354
7.3	Potential Integration Solutions	358
7.3.1	Carbon Nanotube or Graphene Interconnects	359
7.3.2	Self-Assembled Monolayers for Integrated Molecular Junctions	364
7.3.3	Cross Bar Architecture	368
7.4	Beyond Simple Charge Transport	371
7.4.1	Mechanics	371
7.4.2	Thermoelectronics	375
7.4.3	Quantum Interference	381
7.4.4	Spintronics	386
7.4.4.1	SAM-Based Magnetic Tunnel Junctions	386
7.4.4.2	Molecule Based Spin-Valves or Magnetic Tunnel Junctions	387
7.4.4.3	Single Molecular Spin Transistor	389
7.4.4.4	Single Molecular Nuclear Spin Transistor	391
7.4.4.5	Molecule Based Hybrid Spintronic Devices	393
7.5	Electrochemistry with Nanogap Electrodes	395
	References	400
