

## Contents

**Preface to the Second Edition** XI

**List of Contributors** XIII

- 1 The MALDI Process and Method** 1  
*Franz Hillenkamp, Thorsten W. Jaskolla, and Michael Karas*
- 1.1 Introduction 1
- 1.2 Analyte Incorporation 4
- 1.3 Absorption of the Laser Radiation 6
- 1.4 The Ablation/Desorption Process 9
- 1.5 Ionization 13
- 1.6 Fragmentation of MALDI Ions 17
- 1.7 MALDI of Noncovalent Complexes 21
- 1.8 The Optimal Choice of Matrix: Sample Preparation 24
- 1.8.1 Surface Preparation 27
- 1.8.2 Anchor Sample Plates 27
- 1.8.3 Matrix Additives and Influence of the Sample Plate Surface 29
- Abbreviations 30
- References 31
- 2 MALDI Mass Spectrometry Instrumentation** 41  
*Peter B. O'Connor, Klaus Dreisewerd, Kerstin Strupat, and Franz Hillenkamp*
- 2.1 Introduction 41
- 2.2 Lasers for MALDI-MS 42
- 2.3 Fragmentation of MALDI Ions 48
- 2.3.1 MALDI at Elevated Pressure 48
- 2.3.2 Tandem Mass Spectrometry of MALDI Ions 49
- 2.4 Mass Analyzers 52
- 2.4.1 Axial TOF Mass Spectrometers 53
- 2.4.2 Reflectron TOF Mass Spectrometers 55
- 2.4.3 Tandem TOF Mass Spectrometers 56

2.4.4	Orthogonal TOF Mass Analyzers	60
2.4.5	Tandem Mass Spectrometry in oTOF Mass Analyzers	61
2.4.6	Ion Detectors and Data Processing in MALDI-TOF Analyzers	62
2.5	Fourier Transform Ion Cyclotron Resonance Mass Spectrometers	64
2.5.1	Tandem Mass Spectrometry on FTICR Mass Spectrometers	70
2.6	Quadrupole Ion Trap Mass Spectrometers	72
2.6.1	RF-Only Ion Guides and LIT Mass Spectrometers	77
2.6.2	Tandem Mass Spectrometry on QIT Mass Spectrometers	77
2.7	Hybrid Mass Spectrometers	79
2.7.1	Quadrupole TOF Mass Spectrometers	79
2.7.2	Quadrupole FT Mass Spectrometers	80
2.7.3	QIT-TOF Mass Spectrometers	82
2.7.4	Ion Mobility oTOF Mass Spectrometers	83
2.7.5	Orbitrap	87
2.8	Future Directions	92
	Definitions and Acronyms	93
	References	96
<b>3</b>	<b>MALDI-MS in Protein Chemistry and Proteomics</b>	<b>105</b>
	<i>Karin Hjerno and Ole N. Jensen</i>	
3.1	Introduction	105
3.2	Sample Preparation for Protein and Peptide Analysis by MALDI-MS	108
3.3	Strategies for Using MALDI-MS in Protein Biochemistry	111
3.3.1	Peptide Mass Mapping of Purified Proteins	113
3.3.2	Peptide Sequencing by MALDI-MS/MS	114
3.3.3	Analysis of Post-Translational Modifications	116
3.4	Applications of MALDI-MS in Proteomics	119
3.4.1	Protein Identification by MALDI-MS Peptide Mass Mapping	119
3.4.2	Quantitation of Proteins by MALDI-MS	122
3.5	Computational Tools for Protein Analysis by MALDI-MS	123
3.6	Clinical Applications of MALDI-MS	124
3.7	Conclusions	125
	Acknowledgments	125
	References	126
<b>4</b>	<b>MALDI-Mass Spectrometry Imaging</b>	<b>133</b>
	<i>Bernhard Spengler</i>	
4.1	Introduction	133
4.2	History of Mass Spectrometry Imaging (MSI) and Microprobing Techniques	136
4.3	MALDI in Micro Dimensions: Instruments and Mechanistic Differences	137
4.4	Visualization of Mass Spectrometric Information	140
4.5	Data Processing and Data Exchange	143
4.6	Matrix Deposition for High-Resolution Imaging	144

- 4.7 Organisms, Organs, and Tissues: MALDI Imaging at Various Lateral Resolutions 148
  - 4.7.1 Phospholipid Analysis 148
  - 4.7.2 Peptide Analysis 150
  - 4.7.3 Drug Monitoring 154
- 4.8 Whole-Cell and Single-Cell Analysis 154
  - 4.8.1 Cellular Analysis 156
  - 4.8.2 Individually Isolated Cells 156
  - 4.8.3 Direct Cellular and Subcellular Imaging 157
- 4.9 Cell Sorting and Capturing 158
- 4.10 Direct Protein Identification and Localization 160
- 4.11 Identification and Characterization: Requirements for Mass Resolution and Accuracy 162
- 4.12 Conclusions 163
  - Acknowledgments 163
  - References 164
  
- 5 Analysis of Nucleic Acids, and Practical Implementations in Genomics and Genetics 169**
  - Stefan Berkenkamp, Dirk van den Boom, and Daniele Fabris*
  - 5.1 Challenges in Nucleic Acid Analysis by MALDI-MS 169
  - 5.2 Genetic Markers 175
    - 5.2.1 Restriction Fragment Length Polymorphisms (RFLPs) 177
    - 5.2.2 Microsatellites/Short Tandem Repeats (STRs) 177
    - 5.2.3 Single Nucleotide Polymorphisms (SNPs) 178
    - 5.2.4 Characterization of Base Modifications and Covalent Adducts 180
    - 5.2.5 Detection of Noncovalent Complexes of Nucleic Acids 186
  - 5.3 Assay Formats for Nucleic Acid Analysis by MALDI-MS 190
  - 5.4 Applications in Genotyping 192
    - 5.4.1 MALDI-TOF-MS SNP and Mutation Analysis 192
      - 5.4.1.1 The PinPoint Assay 193
      - 5.4.1.2 The PROBE Assay 195
      - 5.4.1.3 The MassEXTEND Assay 196
      - 5.4.1.4 The GOOD Assay 198
      - 5.4.1.5 The Invader Assay 200
      - 5.4.1.6 The Incorporation and Complete Chemical Cleavage Assay 202
      - 5.4.1.7 The Restriction Fragment Mass Polymorphism Assay 203
    - 5.4.2 MALDI-TOF MS for Haplotyping 203
  - 5.5 Applications in Comparative Sequence Analysis 205
  - 5.6 Applications in Quantitation of Nucleic Acids for Analysis of Gene Expression and Gene Amplification 215
    - 5.6.1 Analysis of DNA Mixtures and Allele Frequency Determinations in DNA Pools 215
    - 5.6.2 Analysis of Gene Expression 219
  - 5.7 Future Perspectives for the MALDI-MS Analysis of Nucleic Acids 222

Acknowledgments	223
References	223

<b>6</b>	<b>MALDI-MS of Glycans and Glycoconjugates</b>	239
	<i>Hélène Perreault, Erika Lattová, Dijana Šagi, and Jasna Peter-Katalinic</i>	
6.1	Introduction	239
6.1.1	Glycans in Glycoproteins: Types and Importance	239
6.1.2	Glycosphingolipids	241
6.2	Profiling of Glycans and Glycosphingolipids	242
6.2.1	Importance of Glycan Profiling and Techniques Used for This Purpose	242
6.2.2	Importance of Glycosphingolipid Profiling and Characterization; Techniques Used	243
6.2.3	MALDI-MS of Glycans and Glycoprotein Components	243
6.2.4	N- and O-Glycan Release	248
6.2.5	Preparation of Glycans for MALDI-MS Analysis	250
6.2.6	Preparation of Glycosphingolipids for MALDI-MS Analysis	253
6.3	Structural Determination	255
6.3.1	MS and MS/MS of N-Glycans	255
6.3.2	O-Glycosylation by MS and MS/MS	260
6.3.3	Exoglycosidase Arrays	262
6.3.4	Characterization of Glycopeptides	263
6.4	Quantitative Analysis	265
6.4.1	Quantitative Analysis of Glycans	265
6.4.2	Quantitative Analysis of Glycopeptides (e.g., i-Tag, i-Traq)	266
6.5	Conclusions	267
	References	267
<b>7</b>	<b>Lipids</b>	273
	<i>Jürgen Schiller and Beate Fuchs</i>	
7.1	Introduction	273
7.1.1	Why Are Lipids of Such Great Interest?	273
7.1.2	Problems in Lipid Analysis: A Short Comparison of the Different Methods	276
7.1.3	Analysis of Lipids by Mass Spectrometry	277
7.1.4	Capabilities and Limitations of MALDI-TOF-MS in the Field of Lipid Analysis	278
7.1.5	Choosing an Appropriate Matrix	278
7.1.6	Sample Preparation, Extraction, and Purification	279
7.2	Analysis of Individual Lipid Classes and Their Characteristics	281
7.2.1	The Apolar Lipids: Diacylglycerols, Triacylglycerols, Cholesterol, and Cholesteryl Esters	281
7.2.1.1	Triacylglycerol Mixtures and Vegetable Oil Analyses	285
7.2.2	Zwitterionic Phospholipids: Sphingomyelin, Phosphatidylcholine, and Phosphatidylethanolamine	285

- 7.2.3 Acidic Phospholipids: Phosphatidic Acid, Cardiolipin, Phosphatidylglycerol, Phosphatidylserine, Phosphatidylinositol, and Phosphorylated Phosphoinositides 289
- 7.2.4 Free Fatty Acids 291
- 7.3 MALDI-TOF-MS of Typical Lipid Mixtures 292
- 7.3.1 Brain Lipids 296
- 7.4 Characterization of Typical Oxidation Products of Lipids 297
- 7.5 MALDI-MS Imaging 299
- 7.6 Combining TLC and MALDI for Lipid Analysis 301
- 7.7 Summary and Outlook 303
- Acknowledgments 304
- Abbreviations 305
- References 306
  
- 8 MALDI-MS for Polymer Characterization 313**  
*Liang Li*
- 8.1 Introduction 313
- 8.2 Technical Aspects of MALDI-MS 314
- 8.2.1 Sample Preparation Issues 314
- 8.2.1.1 Matrix 315
- 8.2.1.2 Cationization Reagent 317
- 8.2.1.3 Solvent 320
- 8.2.1.4 Solvent-Free Sample Preparation 325
- 8.2.2 Instrumental and Measurement Issues 326
- 8.2.2.1 Mass Resolution and Accuracy 326
- 8.2.2.2 Sensitivity and Dynamic Range 331
- 8.2.2.3 Mass Range 335
- 8.2.2.4 MS/MS Capability 338
- 8.2.3 Data Processing Issues 341
- 8.3 Attributes and Limitations of MALDI-MS 344
- 8.4 Conclusions and Perspectives 352
- References 354
  
- 9 Small-Molecule Desorption/Ionization Mass Analysis 367**  
*Lucinda H. Cohen, Fangbiao Li, Eden P. Go, and Gary Siuzdak*
- 9.1 Introduction 367
- 9.2 Matrix Choices for Small-Molecule MALDI 368
- 9.2.1 Organic Matrices 368
- 9.2.2 Inorganic Matrices 370
- 9.2.3 Liquid Matrices 374
- 9.2.4 Matrix-Free Approaches 374
- 9.3 Sample Preparation 377
- 9.3.1 Electrospray Sample Deposition 379
- 9.3.2 Analyte Derivatization 379
- 9.3.3 Analyte Pre-Concentration 380

9.3.3.1	Prestructured Sample Supports	380
9.3.3.2	DIOS with Solid Liquid Extraction	381
9.3.4	Matrix Suppression	383
9.4	Qualitative Characterization of LMM Molecules	383
9.5	Analyte Quantitation by MALDI	388
9.5.1	Selection of IS	388
9.5.2	Methods for Improving Quantitative Performance	389
9.5.3	Quantitation of Pharmaceutical Compounds	389
9.5.4	Enzyme Activity and Inhibition Studies	391
9.5.5	Quantitative Analysis of Samples from Complex Biological Matrices	393
9.5.6	Environmental Applications of Quantitative MALDI	394
9.5.7	Separation Methods Coupled with MALDI and DIOS	397
9.5.8	TLC-MALDI	397
9.5.9	Capillary and Frontal Affinity Liquid Chromatography	399
9.6	Conclusions	402
	Acknowledgments	402
	Abbreviations/Acronyms	402
	References	404

**10 Computational Analysis of High-Throughput MALDI-TOF-MS-Based Peptide Profiling 411**

*Thang V. Pham and Connie R. Jimenez*

10.1	Introduction	411
10.2	MALDI-MS Data Preprocessing	413
10.2.1	A Workflow for Data Acquired on a 4800 MALDI-TOF/TOF Mass Spectrometer	416
10.2.2	Identification of Peptide Ion Peaks	417
10.3	Statistical Analysis of Preprocessed Data	418
10.3.1	Unsupervised Methods	421
10.3.2	Supervised Methods	422
10.4	Concluding Remarks	426
	References	426

**11 Biotyping of Microorganisms 431**

*Markus Kostrzewa*

11.1	The Technique	431
11.2	Standard Identification of Bacteria and Other Microorganisms	432
11.3	Applicability and Performance in Routine Laboratories	433
11.4	Direct Specimen Analysis	434
11.5	Subtyping	435
11.6	Resistance Testing	435
11.7	Outlook	436
	References	437
