Preface *xi*

Abbreviations *xiii*

About the Authors *xix*

| | | |
|----------|--|-----------|
| 1 | Supramolecular Polymers: General Considerations | 1 |
| 1.1 | Introduction | 1 |
| 1.2 | Classification Schemes | 2 |
| 1.3 | Supramolecular Polymerization Mechanisms | 4 |
| 1.3.1 | Isodesmic Supramolecular Polymerization | 6 |
| 1.3.2 | Ring-Chain-Mediated Supramolecular Polymerization | 12 |
| 1.3.3 | (Anti)-cooperative Supramolecular Polymerization | 16 |
| 1.4 | Beyond Classical Supramolecular Polymerization | 20 |
| 1.5 | Concluding Remarks | 22 |
| | References | 23 |
| 2 | Supramolecular Assemblies Based on Ionic Interactions | 29 |
| 2.1 | General Aspects | 29 |
| 2.2 | Basic Binding Modes and Discrete Model Assemblies | 30 |
| 2.3 | Supramolecular Polymers, Based on Ionic Interactions | 35 |
| 2.3.1 | Ionic Interactions, as Integral Part of the Polymer Backbone | 36 |
| 2.3.1.1 | Polymers, as Building Blocks | 37 |
| 2.3.1.2 | Small Molecules, as Building Blocks | 42 |
| 2.3.2 | Polymers Featuring Ionic Interactions in the Side Chain | 46 |
| 2.3.3 | Self-assembly of Polyelectrolytes: Toward Polyelectrolyte Complexes | 49 |
| 2.4 | Concluding Remarks | 52 |
| | References | 52 |
| 3 | Supramolecular Polymers, Based on Hydrogen-Bonding Interactions | 57 |
| 3.1 | General Aspects | 57 |
| 3.2 | From H-Bonding Interactions to Supramolecular Polymers | 63 |
| 3.2.1 | Supramolecular Polymers, Based on Single H-Bonding Interactions | 65 |
| 3.2.2 | Supramolecular Polymers, Based on Double H-Bonding Interactions | 66 |

| | | |
|----------|---|------------|
| 3.2.3 | Supramolecular Polymers, Based on Triple H-Bonding Interactions | 72 |
| 3.2.4 | Supramolecular Polymers, Based on Quadruple H-Bonding Interactions | 84 |
| 3.2.5 | Supramolecular Polymers, Based on Sextuple H-Bonding Interactions | 98 |
| 3.2.6 | Supramolecular Polymers, Based on Multiple H-Bonding Interactions | 104 |
| 3.3 | Conclusion Remarks | 107 |
| | References | 108 |
| 4 | Supramolecular Polymers, Based on Metal-to-Ligand Interactions | 117 |
| 4.1 | General Aspects | 117 |
| 4.2 | Synthesis and Design Principles | 119 |
| 4.2.1 | Metal-Binding Sites in Metallo-supramolecular Polymers | 119 |
| 4.2.2 | Synthesis of Metallo-supramolecular Polymers | 121 |
| 4.3 | Linear Metallo-supramolecular Polymers | 121 |
| 4.3.1 | Metallo-supramolecular Polymers, Based on Coordinative Bonding | 121 |
| 4.3.1.1 | Metallopolymers Containing Ditopic Monodentate Ligands | 123 |
| 4.3.1.2 | Coordination Polymers Containing Ditopic Bidentate Ligands | 133 |
| 4.3.1.3 | Coordination Polymers Containing Ditopic Tridentate Ligands | 137 |
| 4.3.2 | Metallo-supramolecular Polymers, Based on Covalent/Ionic Bonding | 159 |
| 4.3.3 | Metallo-supramolecular Polymers Based on Metal–Arene Interactions | 172 |
| 4.4 | Concluding Remarks | 176 |
| | References | 177 |
| 5 | Supramolecular Polymers, Based on π-Electronic Interactions | 195 |
| 5.1 | General Aspects | 195 |
| 5.2 | Columnar Supramolecular Polymers, Based on π – π Stacking Interactions | 197 |
| 5.3 | From π – π Stacking to Advanced Donor–Acceptor-Type Charge–Transfer Interactions | 209 |
| 5.4 | From Charge–Transfer to π -Electronic Ion-Pairing Interactions | 213 |
| 5.5 | Linear Supramolecular Polymers, Based on π -Electronic Interactions | 218 |
| 5.6 | Conclusion and Outlook | 232 |
| | References | 233 |
| 6 | Supramolecular Polymers, Based on Crown Ether Recognition | 239 |
| 6.1 | General Aspects | 239 |
| 6.2 | From Crown Ether Molecular Recognition Toward Supramolecular Polymers | 240 |

| | | |
|----------|--|------------|
| 6.2.1 | Linear Polypseudorotaxanes, Derived from Small-Molecule Building Blocks | 241 |
| 6.2.2 | Linear Supramolecular Polymers Derived from Macromolecular Building Blocks | 252 |
| 6.2.3 | Dendritic, Hyperbranched, Star-shaped, and Grafted Assemblies | 253 |
| 6.3 | Mechanical Interlocking: From Pseudorotaxanes to Rotaxanes | 258 |
| 6.4 | Poly(pseudo)rotaxanes, Derived from Preformed Polymers | 263 |
| 6.5 | Supramolecular Amphiphiles | 266 |
| 6.6 | Concluding Remarks | 269 |
| | References | 269 |
| 7 | Supramolecular Polymers, Based on Cucurbiturils | 275 |
| 7.1 | General Aspects | 275 |
| 7.2 | Interactions of CB[n]s with Small Organic Guest Molecules | 276 |
| 7.3 | Supramolecular Polymers Incorporating CB[n] Units | 278 |
| 7.3.1 | Supramolecular Polymers, Based on Small Organic Molecules | 278 |
| 7.3.2 | Supramolecular Polymers Incorporating (Bio)macromolecular Building Blocks | 291 |
| 7.4 | Concluding Remarks | 295 |
| | References | 296 |
| 8 | Supramolecular Polymers, Based on the Host–Guest Chemistry of Calixarenes | 301 |
| 8.1 | General Aspects | 301 |
| 8.2 | Calixarene-Based Supramolecular Polycaps | 302 |
| 8.3 | Supramolecular Polymers Featuring Vacant Calixarene Scaffolds | 309 |
| 8.4 | Supramolecular Polymers, Formed by Host–Guest Interactions | 311 |
| 8.4.1 | Supramolecular Polymers, Derived from AB-Type Monomers | 312 |
| 8.4.2 | Supramolecular Polymers, Derived from AA- and BB-Type Monomers | 314 |
| 8.5 | Beyond Classical Calix[n]arenes: Calix[4]pyrroles | 322 |
| 8.6 | Miscellaneous Supramacromolecular Assemblies, Based on Calixarenes | 327 |
| 8.7 | Concluding Remarks | 337 |
| | References | 338 |
| 9 | Cyclodextrins in the Field of Supramolecular Polymers | 343 |
| 9.1 | General Aspects | 343 |
| 9.2 | Cyclodextrins and Supramolecular Polymers | 344 |
| 9.2.1 | Linear Polypseudorotaxanes, Derived from Preformed Linear Polymers | 345 |
| 9.2.1.1 | Polypseudorotaxanes from Poly(ethylene glycol) | 347 |
| 9.2.1.2 | Polypseudorotaxanes from Other Polyethers | 348 |
| 9.2.1.3 | Polypseudorotaxanes from Polyesters | 349 |
| 9.2.1.4 | Polypseudorotaxanes from Polyamides and Polyurethanes | 350 |

| | | |
|-----------|---|------------|
| 9.2.1.5 | Polypseudorotaxanes from Polyolefins | 352 |
| 9.2.1.6 | Polyrotaxanes from Inorganic Polymers | 353 |
| 9.2.1.7 | Polypseudorotaxanes from Conductive/Conjugated Polymers | 353 |
| 9.2.1.8 | Polypseudorotaxanes from Polyamines | 355 |
| 9.2.2 | Polypseudorotaxanes, Derived from Other Polymeric Architectures | 356 |
| 9.2.2.1 | Site-Selective Complexation of Linear Block Copolymers | 356 |
| 9.2.2.2 | Polypseudorotaxanes from Star-Shaped Polymers | 359 |
| 9.2.2.3 | Polypseudorotaxanes from Side-Chain Polymers | 360 |
| 9.3 | End-Capping: From Polypseudorotaxanes to Polyrotaxanes | 362 |
| 9.4 | Polymerization of Pre-assembled Pseudorotaxanes | 364 |
| 9.5 | Supramolecular Polymerization, Based on CD Recognition | 368 |
| 9.5.1 | Supramolecular Polymerization of AB-Type Monomers | 369 |
| 9.5.2 | Supramolecular Polymers, Derived from AA- and BB-Type Monomers | 373 |
| 9.5.3 | Supramolecular Polymers, Derived from AA-Type Monomers and CDs | 374 |
| 9.6 | Amphiphilic Supramolecular Diblock Copolymers | 375 |
| 9.7 | Concluding Remarks | 379 |
| | References | 380 |
| 10 | Supramolecular Polymers, Based on the Host–Guest Chemistry of Pillarenes | 387 |
| 10.1 | General Aspects | 387 |
| 10.2 | Host–Guest Complexation Between Pillarenes and Linear Polymers | 389 |
| 10.3 | Supramolecular Polymers, Derived from Pillarene-based Host–Guest Interactions | 391 |
| 10.4 | Hyperbranched and Cross-linked Assemblies | 401 |
| 10.5 | Supramolecular Assemblies, Based on Amphiphilic Pillar[5]arenes | 405 |
| 10.6 | Concluding Remarks | 410 |
| | References | 411 |
| 11 | Supramolecular Polymers, Formed by Orthogonal Non-covalent Interactions | 415 |
| 11.1 | Introduction | 415 |
| 11.2 | Orthogonal Combinations of Supramolecular Interactions Involving Metal-to-Ligand Coordination | 417 |
| 11.3 | Orthogonal Combinations of Supramolecular Interactions Involving H-Bonding | 428 |
| 11.4 | Miscellaneous Orthogonal Combinations of Supramolecular Interactions | 438 |
| 11.5 | Biomimetic Orthogonal Self-Assembly: Protein Recognition | 443 |
| 11.6 | Concluding Remarks | 447 |
| | References | 448 |

| | | |
|-----------|--|------------|
| 12 | Characterization of Supramolecular Polymers | 453 |
| 12.1 | Introduction | 453 |
| 12.2 | Estimation of the Molar Mass from the Theories of Supramolecular Polymer Science | 454 |
| 12.3 | Size-Exclusion Chromatography | 460 |
| 12.4 | Viscometry | 463 |
| 12.5 | Light Scattering | 465 |
| 12.6 | Vapor Pressure Osmometry | 467 |
| 12.7 | Analytical Ultracentrifugation | 468 |
| 12.8 | NMR Spectroscopy | 470 |
| 12.9 | Mass Spectrometry | 475 |
| 12.10 | Microscopy Imaging | 476 |
| 12.10.1 | Scanning Probe Microscopy | 476 |
| 12.10.2 | Electron Microscopy | 482 |
| 12.11 | Small/Wide-Angle X-Ray Scattering | 484 |
| 12.12 | X-Ray Crystallography | 486 |
| 12.13 | Small-Angle Neutron Scattering | 487 |
| 12.14 | Asymmetric Flow Field-Flow Fractionation | 490 |
| 12.15 | Taylor Dispersion Analysis | 492 |
| 12.16 | They Are Very Complex Structures but Totally Timely ... | 494 |
| | References | 495 |
