Preface *XIII*

List of Contributors *XV*

1	Tetronic Acids	1
	<i>Dimitris Georgiadis</i>	
1.1	Introduction	1
1.2	Natural Occurrence, Biological Activities, and Biosynthesis	1
1.3	5-Ylidene Tetronic Natural Products	6
1.3.1	Pulvinic Acids and Pulvinones	6
1.3.2	Agglomerins	11
1.3.3	Tetronomycin	13
1.3.4	Stemofoline Alkaloids	13
1.3.5	Variabilin	17
1.3.6	Tetrodecamycin	17
1.4	5-Monosubstituted Tetronic Natural Products	19
1.4.1	Carlic, Carlosic, Carolic, Carolinic, and Viridicatic Acids	19
1.4.2	RK-682	20
1.4.3	Massarilactone B	21
1.4.4	Annularins F, G, and H	21
1.4.5	Palinurin	23
1.4.6	Pesthetoxin	24
1.4.7	Rotundifolides A and B	24
1.5	5-Disubstituted Tetronic Natural Products	25
1.5.1	5-Dialkyl Tetronic Natural Products	25
1.5.1.1	Vertinolide	25
1.5.1.2	Papyracillic Acid B	26
1.5.1.3	Bisorbibutenolide	26
1.5.2	5-Spirotetronic Natural Products	29
1.5.2.1	Spirotetronic Antibiotics	29
1.5.2.2	Ircinianin and Wistarlin	35
1.5.2.3	Stemonamine Alkaloids	35
1.5.2.4	Abyssomicins	37
1.6	5-Unsubstituted Tetronic Natural Products	41

1.6.1	Tetronasin	41
1.7	Conclusions	42
	References	43

2 **Recent Advances in the Field of Naturally Occurring 5,6-Dihydropyran-2-ones**

Juan Alberto Marco and Miguel Carda

2.1	Introduction	51
2.2	Synthetic Methodologies for 5,6-Dihydropyran-2-ones	52
2.2.1	Lactonization of Substituted δ -Hydroxy Acid Derivatives	52
2.2.2	Oxidation of Substituted Dihydropyran Derivatives	53
2.2.3	Ring-Closing Metathesis	54
2.2.4	Miscellaneous Methods	54
2.3	Formation of Stereogenic Centers inside the Dihydropyrone Ring	55
2.3.1	Use of Chiral Precursors	56
2.3.1.1	Carbohydrate and Related Precursors	56
2.3.1.2	Chiral Hydroxy Acids	58
2.3.1.3	Chiral Epoxides	60
2.3.1.4	Other Chirons	62
2.3.2	Asymmetric (Enantioselective) Reactions	64
2.3.2.1	Asymmetric (Enantioselective) Sharpless Epoxidations or Dihydroxylations	64
2.3.2.2	Asymmetric Aldol-Type Reactions	68
2.3.2.3	Asymmetric Allylations	69
2.3.2.4	Asymmetric Carbonyl Reductions	71
2.3.2.5	Asymmetric Alkylations	72
2.3.2.6	Asymmetric Epoxide Hydrolysis	73
2.3.2.7	Asymmetric Cycloadditions	74
2.3.2.8	Other Asymmetric Methods	75
2.4	Pharmacological Properties of Pyrones	78
2.5	Biosynthetic Formation of Pyrones	79
2.6	Syntheses of Natural 5,6-Dihydropyran-2-ones Reported during the Period from 2006 to the First Half of 2012	91
	References	91

3 **β -Lactams**

Girija S. Singh and Siji Sudheesh

3.1	Introduction	101
3.1.1	Biosynthesis of Penicillin and Cephalosporin	102
3.2	Monocyclic β -Lactams	103
3.2.1	Biosynthesis of Nocardicin A	104
3.2.2	Synthetic Approaches to Construct β -Lactam Ring	105
3.2.2.1	Cycloaddition Reactions	106
3.2.2.2	Cyclization Reactions	115
3.2.2.3	Miscellaneous Approaches	118

3.2.3	Biological Activity of Monocyclic 2-Azetidinones	119
3.3	Penams	121
3.3.1	Synthetic Approaches to Penam Skeleton	121
3.3.2	Biological Activity of Penams	122
3.4	Cephalosporins	124
3.4.1	Synthetic Approaches to Cephalosporin Skeleton	125
3.4.2	Biological Activity of Cephalosporins	128
3.5	Clavulanic Acid	130
3.5.1	Synthetic Approaches to Clavam Skeleton	131
3.5.2	Biological Activity of Clavams	132
3.6	Carbapenems	133
3.6.1	Synthetic Approaches to Carbapenem Skeleton	134
3.6.2	Biological Activity of Carbapenems	136
3.7	Spiro-Fused β -Lactams	137
3.7.1	Occurrence and Structure of Chartellines	137
3.7.2	Total Synthesis of Chartelline C	137
3.7.3	Biological Activity of Spiro-Fused β -Lactams	140
3.8	Summary	140
	References	141
4	α-Alkylidene-γ- and δ-Lactones and Lactams	147
	<i>Łukasz Albrecht, Anna Albrecht, and Tomasz Janecki</i>	
4.1	Introduction	147
4.2	Occurrence, Biosynthesis, and Biological Activities of α -Alkylidene γ - and δ -Lactones and Lactams	148
4.2.1	α -Alkylidene- γ -Lactones	148
4.2.2	α -Alkylidene- δ -Lactones	152
4.2.3	α -Alkylidene- γ - and δ -Lactams	153
4.3	Recent Advances in the Synthesis of α -Alkylidene- γ - and δ -Lactones and Lactams	153
4.3.1	Cyclization of 2-Alkylidene-4-(5-)Hydroxyalkanoates and 2-Alkylidene-4-(5-)Aminoalkanoates in the Synthesis of α -Alkylidene- γ - and δ -Lactones and Lactams	154
4.3.1.1	Organometallic Reagents Derived from 2-Bromomethylacrylic Acid and Its Derivatives in the Synthesis of 2-Alkylidene-4-Hydroxyalkanoates and 2-Alkylidene-4-Aminoalkanoates	155
4.3.1.2	Application of Allylboronates in the Synthesis of 2-Alkylidene-4-Hydroxyalkanoates and 2-Alkylidene-4-Aminoalkanoates	156
4.3.1.3	Baylis–Hillman Alcohol Derivatives in the Synthesis of α -Alkylidene γ - and δ -Lactones and Lactams	161
4.3.1.4	Ring-Opening Reactions in the Synthesis of 2-Alkylidene-4-Hydroxyalkanoates and 4-Aminoalkanoates	167
4.3.2	Construction of α -Alkylidene- γ - and δ -Lactone and Lactam Rings via Intramolecular Morita–Baylis–Hillman Reaction	168

4.3.3	Methods Involving α -Dialkoxyphosphoryl- γ - and δ -Lactones and Lactams as Key Intermediates	172
4.3.3.1	Methods Involving Cyclic α,β -Unsaturated Precursors	172
4.3.3.2	Methods Involving 2-Dialkoxyphosphoryl 4-(5-)Hydroxy or 4-(5-)Aminoalkanoates as Key Intermediates	174
4.3.3.3	α -Diethoxyphosphoryl- δ -Lactones in the Synthesis of 3-Methylene-3,4-Dihydrocoumarins	182
4.3.3.4	Annulation of the Lactone Frameworks via Carbon–Carbon Bond-Forming Reactions	184
4.3.4	β -Elimination Reaction in the Synthesis of α -Alkylidene- γ -Lactones or γ -Lactams	184
4.3.5	Oxidation of 3-Alkylidenetetrahydrofuranones in the Synthesis of α -Alkylidene- γ -Lactones	186
4.3.6	Miscellaneous Methods for the Preparation of α -Alkylidenelactones and Lactams	187
4.4	Conclusions	188
	References	188
5	Medium-Sized Lactones	193
	<i>Isamu Shiina and Kenya Nakata</i>	
5.1	Introduction	193
5.1.1	Natural Eight- and Nine-Membered Lactones	193
5.1.2	Lactonization Methods	194
5.1.2.1	Corey–Nicolaou <i>S</i> -Pyridyl Ester Lactonization Method	195
5.1.2.2	Mukaiyama Onium Salt Method	195
5.1.2.3	Masamune Thioester Activation Method	197
5.1.2.4	Yamaguchi Mixed-Anhydride Method	198
5.1.2.5	Mitsunobu Alcohol Activation Method	199
5.1.2.6	Keck–Steglich DCC/DMAP·HCl Activation Method	199
5.1.2.7	Shiina Benzoic Anhydride Method	200
5.2	Total Synthesis of Eight-Membered Lactones	203
5.2.1	Cephalosporolide D	203
5.2.1.1	Shiina Total Synthesis (1988)	203
5.2.1.2	Buszek Total Synthesis (2001)	204
5.2.1.3	Rao Total Synthesis (2010)	204
5.2.1.4	Sabitha Total Synthesis (2011)	205
5.2.2	Octalactins A and B	205
5.2.2.1	Buszek Total Synthesis (1994)	205
5.2.2.2	Clardy Total Synthesis (1994)	206
5.2.2.3	Holmes Total Synthesis (2004)	207
5.2.2.4	Shiina Total Synthesis (2004)	207
5.2.2.5	Andrus Formal Total Synthesis (1996)	208
5.2.2.6	Hatakeyama Synthesis of the Lactone Moiety (1998)	209
5.2.2.7	Garcia Synthesis of the Lactone Moiety (1998)	210

5.2.2.8	Buszek Alternative Synthesis of Octalactin A (2002)	210
5.2.2.9	Cossy Synthesis of the Lactone Moiety (2005)	211
5.2.2.10	Hulme Partial Synthesis (1997)	211
5.2.3	Solandelactones A–H	212
5.2.3.1	Martin Total Synthesis of Solandelactone E (2007)	212
5.2.3.2	White Total Synthesis of Solandelactones E and F (2007)	213
5.2.3.3	Pietruszka Total Synthesis of Solandelactones A–H (2008)	213
5.2.3.4	Aggarwal Total Synthesis of Solandelactones E (2010) and F (2012)	214
5.2.3.5	Datta Synthesis of the Lactone Moiety (1988)	214
5.2.3.6	Mohapatra Synthesis of the Lactone Moiety (2003)	215
5.3	Total Synthesis of Nine-Membered Lactones	215
5.3.1	Halicolactone	215
5.3.1.1	Wills Total Synthesis (1995)	216
5.3.1.2	Takemoto–Tanaka Total Synthesis (2000)	216
5.3.1.3	Kitahara Total Synthesis (2002)	216
5.3.1.4	Tang Total Synthesis (2009)	217
5.3.1.5	Pietruszka Total Synthesis (2010)	218
5.3.1.6	Datta Formal Synthesis (1998)	218
5.3.2	Griseoviridin	219
5.3.2.1	Meyers Total Synthesis (2000)	219
5.3.3	2-Epibotcinolide	219
5.3.3.1	Shiina Total Synthesis (2006)	220
5.3.3.2	Chakraborty Synthesis of the Lactone Moiety (2006)	222
5.4	Conclusions	222
	References	223

6	Macrolactones	229
	<i>Gangavaram V. M. Sharma and Venkata Ramana Doddi</i>	
6.1	Introduction	229
6.1.1	Classification of Macrolides	231
6.1.1.1	“Polyoxo” Macrolides	232
6.1.1.2	Polyene Macrolides	232
6.1.1.3	Ionophoric Macrolides	233
6.1.1.4	Ansamycin Macrolides	233
6.1.1.5	Other Macrolides	234
6.1.2	Macrolactones as Chemical Signals (Semiochemicals)	235
6.1.3	Macrolactones as Musks	236
6.2	General Methods for the Synthesis of Macrolactones	236
6.3	Synthesis of Macrolides	241
6.3.1	Synthesis of Patulolide C	241
6.3.2	Synthesis of Balticolide	242
6.3.3	Synthesis of Oximidine II	243
6.3.4	Synthesis of Ripostatin B	245
6.3.5	Synthesis of Azamacrolides	247

6.3.6	Synthesis of (+)-Acutiphycin	247
6.3.7	Synthesis of Archazolid A	250
6.3.8	Synthesis of Epothilone B	251
6.3.9	Synthesis of Batatoside L	252
6.4	Synthesis of Macrodiolides	252
6.4.1	Synthesis of Verbalactone	254
6.4.2	Synthesis of Acremodiol	255
6.4.3	Synthesis of Amphidinolide X	257
6.4.4	Synthesis of Marinomycin A	258
6.5	Synthesis of Macrotriolides	260
6.5.1	Synthesis of Macrosphelides A and E	261
6.5.2	Synthesis of Macrosphelides C and F	262
6.5.3	Synthesis of Macrosphelides G and I	263
6.5.4	Synthesis of Macrosphelide M	266
6.6	Conclusions and Perspectives	267
	Abbreviations	267
	References	269
7	Resorcylic Acid Lactones	273
	<i>Carmela Napolitano and Paul V. Murphy</i>	
7.1	Introduction – A Historical Perspective	273
7.2	Biosynthesis	277
7.3	Chemical Synthesis	277
7.3.1	Zearalenone	279
7.3.2	Radicicol	285
7.3.3	Pochonins	292
7.3.4	RALs with <i>cis</i> -Enone Groups	295
7.3.5	Aigialomycin D	303
7.3.6	Other RALs	309
7.4	Conclusion and Outlook	315
	References	315
8	Cyclic Peptides	321
	<i>Srinivasa Rao Adusumalli, Andrei K. Yudin, and Vishal Rai</i>	
8.1	Introduction	321
8.2	Synthesis of Natural Lactones and Lactams	332
8.2.1	Cyclocinamide A	332
8.2.2	Biphenomycin B	333
8.2.3	Antillatoxin	336
8.2.4	Halipeptins	338
8.2.5	Largazole	340
8.2.6	Dendroamide A	342
8.2.7	Chondramide C	346
8.2.8	Cyclocitropsides	346
8.2.9	Sanguinamide B	349

8.2.10	Apratoxin A	349
8.2.11	Thiocillin I	351
8.2.12	Lagunamide A	353
8.2.13	Kapakahines	356
8.2.14	Chloptosin	357
8.3	Conclusion	359
	References	361
	Index	371
