Preface XVII

1	Nanoparticle- and Nanofiber-Based Polymer Nanocomposites: An Overview	1
	<i>Muthukumaraswamy Rangaraj Vengatesan and Vikas Mittal</i>	
1.1	Introduction	1
1.2	Nanoparticles	2
1.2.1	Synthesis of Nanoparticles	2
1.3	Fibrous Nanomaterials	3
1.3.1	Self-Assembly Method	3
1.3.2	Electrospinning Method	4
1.3.3	Miscellaneous Methods	6
1.3.3.1	Chemical Vapor Deposition Method (CVD)	6
1.3.3.2	Thermal Evaporation	7
1.4	Nanoparticle-Reinforced Polymer Nanocomposites	7
1.4.1	Effect of Size and Dispersion of Nanoparticles in Polymer Matrices	7
1.4.2	Influence of Nanoparticles on the Thermal Properties of Polymer Nanocomposites	8
1.4.3	Influence of Nanoparticles on the Mechanical Properties of Polymers	9
1.4.4	Electrical Properties of Nanoparticle-Reinforced Polymer Nanocomposites	11
1.4.5	Application of Nanoparticle-Reinforced Polymer Nanocomposites	13
1.4.5.1	Coatings	13
1.4.5.2	Separation and Purification	14
1.4.5.3	Biomedical	15
1.5	Fibrous-Nanomaterial-Based Polymer Nanocomposites	16
1.5.1	Natural-Fiber-Reinforced Polymer Nanocomposites	16
1.5.1.1	Mechanical and Thermal Properties of Natural-Fiber-Reinforced Polymer Nanocomposites	17

1.5.2	Metal and Metal Oxide Fibrous Nanomaterial–Reinforced Polymer Nanocomposites	18
1.5.2.1	Electrical Properties of Metal and Metal Oxide Nanowire–Reinforced Polymer Nanocomposites	18
1.5.3	Vapor-Grown Carbon Nanofiber (VGCNF)-Reinforced Polymer Nanocomposites	20
1.5.3.1	Effect of VGCNFs on Thermal and Mechanical Properties of Polymer Nanocomposites	21
1.5.3.2	Effect of VGCNFs on Electrical Properties of Polymer Nanocomposites	21
1.5.4	Applications of Fibrous-Nanomaterial-Based Polymer Nanocomposites	24
1.5.4.1	Biomedical Applications	24
1.5.4.2	Electromagnetic Interface (EMI) Shielding Application	26
	List of Abbreviations	27
	References	28
2	Fabrication and Surface Characterization of Spherical Fly Ash Particle–Reinforced Epoxy Resin	39
	<i>Shahad Ibraheem, Sheila Devasahayam, Owen Standard, and Sri Bandyopadhyay</i>	
2.1	Introduction	39
2.1.1	Fly Ash	39
2.1.2	Color of Fly Ash	41
2.1.3	Advantages of Fly Ash	41
2.1.4	Sources of Fly Ash	42
2.1.5	Physical and Chemical Properties	42
2.1.5.1	Physical Properties	42
2.1.5.2	Chemical Properties	43
2.2	Matrix Material for Polymer Matrix Composites PMCs	46
2.2.1	Epoxy Resins	46
2.2.2	Curing of Epoxy Resin	47
2.2.3	Properties of Epoxy Resins	49
2.2.4	Applications	49
2.3	Experimental Fabrication: Dough Prepared for Experiment Part	49
2.3.1	Epoxy Resin	49
2.3.2	Fly Ash	50
2.3.3	Fabrication of Epoxy–Fly Ash Composites	50
2.3.4	Casting	51
2.3.5	Curing	51
2.3.6	Materials Composition	51
2.4	Testing and Characterization	52
2.4.1	Secondary Ion Mass Spectrometry (SIMS)	52
2.4.1.1	Advantages of SIMS Technique	53
2.4.1.2	Limitations of SIMS	54

2.4.1.3	Epoxy–Fly Ash Composite Sample Preparation for Use in SIMS	54
2.4.1.4	Energy-Dispersive X-Ray Spectrometry (EDS)	54
2.5	This Research (Done by the Authors)	57
2.5.1	10%FA–Epoxy Material	57
2.5.2	EDS for 10% FA-Epoxy Composite	58
2.5.3	SIMS for 50 wt% FA–Epoxy Composite	59
2.5.4	EDS for 50% FA–Epoxy Composite	60
2.6	Conclusions	61
	Acknowledgment	64
	References	64
3	Morphology, Structure, and Properties of Carbon Fiber–Polyamide Composites	67
	<i>Lin Sang and Zhiyong Wei</i>	
3.1	Introduction	67
3.2	Experiments	69
3.2.1	Materials	69
3.2.2	Preparation of Composites	69
3.2.2.1	PA/CF Composite Preparation	69
3.2.2.2	PA/KCF Composite Preparation	69
3.2.2.3	PA/Toughener/CF Composite Preparation	69
3.2.3	Characterization	70
3.2.3.1	Mechanical Testing	70
3.2.3.2	Scanning Electron Microscopy	70
3.2.3.3	Differential Scanning Calorimetry	70
3.2.3.4	X-Ray Diffraction	71
3.2.3.5	Polarized Optical Microscopy	71
3.2.3.6	Thermogravimetric Analysis	71
3.2.4	Mechanical Properties, Crystallization, and Melting Behaviors of Carbon-Fiber-Reinforced PA6 Composites	71
3.2.4.1	Mechanical Properties	71
3.2.4.2	Surface Morphology	72
3.2.4.3	Nonisothermal Crystallization Behavior	73
3.2.4.4	Subsequent Melting Behavior	75
3.2.4.5	Crystalline Structure and Spherulitic Morphology	76
3.2.4.6	Thermal Stability	77
3.2.5	Mechanical Properties and Nonisothermal Crystallization of Carbon-Fiber-Reinforced PA6 Composites Treated with Coupling Agents	79
3.2.5.1	Surface Morphology of Treated CF	79
3.2.5.2	Mechanical Properties	79
3.2.5.3	Surface Morphology	81
3.2.5.4	Nonisothermal Crystallization Behavior	82
3.2.5.5	Subsequent Melting Behavior	83
3.2.5.6	Crystalline Structure and Spherulitic Morphology	84

3.2.5.7	Thermal Stability	86
3.2.6	Mechanical Properties and Nonisothermal Crystallization of Carbon-Fiber-Reinforced PA6 Composites Toughened by Maleated Elastomers	87
3.2.6.1	Mechanical Properties	87
3.2.6.2	Surface Morphology	89
3.2.6.3	Nonisothermal Crystallization Behavior	91
3.2.6.4	Subsequent Melting Behavior	92
3.2.6.5	Crystalline Morphology and Structure	93
3.2.6.6	Thermal Stability	94
3.3	Conclusion	97
	Acknowledgments	98
	References	98
4	Natural-Fiber-Reinforced Polymer Composites	101
	<i>Omid Nabinejad and Sujan Debnath</i>	
4.1	Introduction	101
4.2	Overview of Natural Fibers from Plant Resources	102
4.2.1	Advantages of Natural Fibers	102
4.2.2	Disadvantages of Natural Fibers	103
4.2.3	Chemical Constituents of Natural Fibers	104
4.2.4	Properties of Natural Fibers	105
4.2.5	Surface Treatment	107
4.2.5.1	Physical Treatment	107
4.2.5.2	Chemical Treatment	107
4.3	Natural-Fiber Composites	110
4.3.1	Processing of Natural Fiber Composites (NFCs)	110
4.3.2	Mechanical Performance of Natural Fiber Composites (NFCs)	111
4.3.2.1	Tensile Properties	112
4.3.2.2	Flexural Properties	112
4.3.2.3	Impact Properties	113
4.3.2.4	Dynamic Mechanical Performance	114
4.3.3	Thermal Stability of Natural Fiber Composites (NFCs)	114
4.3.3.1	Thermal Degradation of Fibers	115
4.3.3.2	Thermal Degradation of Composites	117
4.3.4	Moisture Absorption of Natural Fiber Composites (NFCs)	117
4.3.5	Tribological Performance of Natural Fiber Composites (NFCs)	119
4.4	Conclusion	120
	References	121
5	Natural-Fiber-Reinforced Epoxy and USP Resin Composites	127
	<i>Munusamy Kesava and Kannaiyan Dinakaran</i>	
5.1	Introduction	127
5.2	Classification of Natural Fibers	128
5.3	Natural-Fiber-Reinforced Epoxy Resin Composites	129

5.3.1	Natural Fiber and Epoxy Matrix – Interfacial Adhesion	129
5.3.2	Natural and Synthetic Fiber Coreinforced Epoxy Resin Composites	134
5.3.3	Animal-Fiber-Reinforced Epoxy Resin Composites	134
5.4	Natural-Fiber-Reinforced USP Resin Composites	135
5.5	Miscellaneous Thermoset Resin–Natural Fiber Composites	139
5.6	Market Trend – Future Perspectives	140
5.7	Summary	141
5.8	Tables on Mechanical Properties of Thermoset Resin–Natural Fiber Composites	141
	References	149
6	Influence of Surface Treatment of Fillers on Mechanical, Surface, and Water Sorption Behavior of Natural-Fiber-Reinforced Polypropylene Composites	157
	<i>Ulas Atikler and Funda Tihminlioglu</i>	
6.1	Introduction	157
6.2	Materials and Methods	159
6.2.1	Materials	159
6.2.2	Size Reduction and Surface Treatment of Fibers	159
6.2.3	Preparation of Composites	160
6.2.4	Characterization of Composites	161
6.2.4.1	Rheological Properties of the Composites during Melt Mixing	161
6.2.4.2	Mechanical Properties	161
6.2.4.3	Morphological Properties	161
6.2.4.4	Water Sorption Properties	162
6.3	Results and Discussion	162
6.3.1	Rheological Properties of Composites	162
6.3.2	Mechanical Properties of Composites	166
6.3.2.1	Tensile Strength of Composites	166
6.3.2.2	Young’s Modulus of Composites	169
6.3.2.3	Strain at Break and Energy to Break of Composites	170
6.3.3	Morphological Properties of Composites	171
6.3.4	Water Sorption of Composites	174
6.4	Conclusions	176
	References	177
7	Tribological Behavior of PA/Rice Bran and PA/Glass Bead Composites	181
	<i>Kei Shibata, Takeshi Yamaguchi, and Kazuo Hokkirigawa</i>	
7.1	Introduction	181
7.2	Rice Bran Ceramics	182
7.3	Glass Beads	185
7.4	Preparation of PA/Rice Bran Ceramics and PA/Glass Bead Composites	185

7.5	Mechanical Properties of PA/Rice Bran Ceramics and PA/Glass Bead Composites	187
7.6	Friction and Wear Behavior of PA/Rice Bran Ceramics and PA/Glass Bead Composites	187
7.7	Effect of Severity of Sliding Contact on Wear Behavior of PA Composites	195
7.8	Summary	200
	References	200
8	Utilization of Waste Carbon as Reinforcement in Thermoset Composites	203
	<i>Shakuntala Ojha, Gujjala Raghavendra, and Samir Kumar Acharya</i>	
8.1	Introduction	203
8.2	Natural Fiber a Source of Carbonaceous Material	204
8.2.1	Holocellulose	204
8.2.2	Cellulose	205
8.2.3	Hemicellulose	205
8.2.4	Lignin	206
8.2.5	Pectin	207
8.3	Physical Characterization of Carbon Black Particles	207
8.3.1	Chemical Composition	207
8.3.2	Proximate Analysis	208
8.3.3	Ultimate Analysis	208
8.3.4	X-Ray Diffraction (XRD)	209
8.3.5	Fourier Transform Infrared Spectroscopy (FTIR)	209
8.3.6	Scanning Electron Microscope Analysis (SEM)	210
8.4	Extraction of Waste Carbon from Lignocellulosic Fiber	210
8.4.1	Preparation of Raw Shell Particles	210
8.4.2	Processing of Carbon Black Particles through Carbonization (Pyrolysis)	211
8.4.3	Processing of Activated Carbon Black	211
8.4.3.1	Impregnation with Zinc Chloride ($ZnCl_2$) Chemical Activating Agent	211
8.4.3.2	Carbonization	212
8.4.3.3	Washing	212
8.4.4	Thermoset Polymer Composite	213
8.5	Thermoset Polymer Composite Reinforced with Waste Carbon	216
8.6	Results and Analysis	217
8.6.1	Chemical Composition	217
8.6.2	Proximate Analysis (wt% by Wet Weight Basis)	217
8.6.3	Ultimate Analysis	218
8.6.4	Crystal Structure Transition in Wood Apple Shell and Coconut Shell Particulates	218
8.6.5	FTIR Analysis of Wood Apple Shell and Coconut Shell Particulates	220

8.6.6	Morphological Characteristics	221
8.7	Mechanical Properties of Thermoset Polymer Composite	223
8.7.1	Tensile Property Characterization	223
8.7.2	Flexural Property Characterization	224
8.8	Tribological Properties of Thermoset Polymer Composite	225
	References	228
9	Coconut-Shell-Based Fillers for Partial Eco-Composites	231
	<i>Suleiman Bolaji Hassan, Jacob Sarki, and Victor Sunday Aigbodion</i>	
9.1	Introduction	231
9.1.1	Coconut Shell	232
9.2	Experimental Procedure	233
9.2.1	Materials/Equipment	233
9.2.2	Characterization of Coconut Shell Ash	234
9.2.2.1	Processing of the Coconut Shell	234
9.2.2.2	X-Ray Diffraction (XRD) Analysis	235
9.2.2.3	Samples Preparation	235
9.2.3	Determination of Density	235
9.2.4	Microstructural Analysis	236
9.2.5	Mechanical Properties	236
9.2.5.1	Tensile and Flexural Properties	236
9.2.5.2	Hardness Value Determination	236
9.2.5.3	Impact Energy Determination	238
9.2.6	Thermal Properties	238
9.3	Results and Discussion	238
9.3.1	Characterization of the Coconut Shell Particles	238
9.3.1.1	Compositional Analysis and Microstructure of the Coconut Shell Particles	238
9.3.2	Density of the Coconut Shell Particles and the Composites	240
9.3.3	Surface Morphology of the Composites	241
9.3.4	Mechanical Properties of Epoxy/Coconut Shell Particulate Composites	244
9.3.4.1	Tensile Properties	244
9.3.4.2	Flexural Strength Values	245
9.3.4.3	Hardness Values	246
9.3.4.4	Impact Energy Values	246
9.3.5	Thermal Properties (DTA/TGA)	246
9.4	Conclusions	249
	References	250
