List of Boxes XVII

Preface XIX

Acknowledgments XXV

List of Abbreviations XXVII

1 Introduction 1

- 1.1 Photochemistry and Photophysics in Science and Technology 1
- 1.2 Historical Notes 2
- 1.3 A New Dimension of Chemistry and Physics 3
- 1.4 The Nature of Light 5
- 1.5 Absorption of Light 7
- 1.6 Quantum Yield, Efficiencies, and Excited-State Reactivity 8
- References 10

2 Elementary Molecular Orbital Theory 11

- 2.1 Introduction 11
- 2.2 The Hydrogen Atom 11
- 2.3 Polyelectronic Atoms 13
- 2.4 From Atoms to Molecules 17
- 2.5 Electronic Structure of Homonuclear Diatomic Molecules 21
- 2.6 Electronic Structure of Heteronuclear Diatomic Molecules 25
- 2.7 Simple Polyatomic Molecules and Elements of Group Theory 26
 - 2.7.1 Elements of Group Theory 26
 - 2.7.2 Water 29
 - 2.7.3 Ammonia 31
- 2.8 Typical Organic Molecules 33
 - 2.8.1 Methane 33
 - 2.8.2 Ethene 35
 - 2.8.3 Benzene 37
 - 2.8.4 Formaldehyde 39
- 2.9 Transition Metal Complexes 41
 - 2.9.1 General Concepts 41

2.9.2	Typical Metal Complexes	48
	References	52
3	Light Absorption and Excited-State Deactivation	55
3.1	Light Absorption	55
3.1.1	Selection Rules	57
3.1.2	Symmetry Selection Rules	58
3.1.3	Spin Selection Rules	59
3.1.4	The Franck–Condon Principle	60
3.1.5	Visualization of Photochemical Reactions on Potential Energy Surfaces	62
3.2	Jablonski Diagram	64
3.3	Excited-State Deactivation	68
3.3.1	Vibrational Relaxation	68
3.3.2	Radiationless Deactivation	68
3.3.3	Radiative Deactivation	71
3.3.4	Radiative Lifetime	72
3.4	Chemical Reactions	73
3.5	Kinetic Aspects	74
3.6	Solvent and Temperature Effects	75
3.6.1	Solvatochromic Shift	75
3.6.2	Crossing of States	77
3.6.3	Temperature Effects on Excited-State Lifetime	79
3.6.4	Thermally Activated Delayed Fluorescence	80
3.7	Selected Molecules	81
3.7.1	Oxygen	81
3.7.2	Naphthalene	83
3.7.3	Benzophenone	85
3.7.4	Zinc(II) Tetraphenyl Porphyrin	87
3.7.5	$[\text{Cr}(\text{en})_3]^{3+}$	90
3.7.6	$[\text{Co}(\text{NH}_3)_6]^{3+}$	92
3.7.7	$[\text{Ru}(\text{bpy})_3]^{2+}$	94
3.8	Semiconductors	96
	References	100
4	Excited States: Physical and Chemical Properties	103
4.1	Excited State as a New Molecule	103
4.2	Lifetime	103
4.3	Energy	104
4.4	Geometry	105
4.4.1	Small Molecules	106
4.4.2	Ethene	107
4.4.3	Ethyne	108
4.4.4	Benzene	109
4.4.5	Formaldehyde	109

4.4.6	Square Planar Metal Complexes	111
4.5	Dipole Moments	112
4.6	Electron Transfer	114
4.7	Proton Transfer	117
4.8	Excimers and Exciplexes	120
	References	122
5	From Molecules to Supramolecular Systems	125
5.1	Supramolecular (Multicomponent) Systems and Large Molecules	125
5.2	Electronic Interaction in Mixed-Valence Compounds	127
5.3	Electronic Interaction in Donor–Acceptor Complexes	129
5.4	Electronic Stimulation and Electronic Interaction in the Excited State	131
5.5	Formation of Excimers and Exciplexes in Supramolecular Systems	134
	References	136
6	Quenching and Sensitization Processes in Molecular and Supramolecular Species	139
6.1	Introduction	139
6.2	Bimolecular Quenching	140
6.2.1	Stern–Volmer Equation	140
6.2.2	Kinetic Details	143
6.2.3	Static versus Dynamic Quenching	144
6.2.4	Sensitized Processes	145
6.2.5	Spin Considerations	146
6.3	Quenching and Sensitization Processes in Supramolecular Systems	146
6.4	Electron-Transfer Kinetics	150
6.4.1	Marcus Theory	150
6.4.2	Quantum Mechanical Theory	153
6.4.2.1	The Electronic Factor	154
6.4.2.2	The Nuclear Factor	156
6.4.2.3	Optical Electron Transfer	156
6.5	Energy Transfer	157
6.5.1	Coulombic Mechanism	159
6.5.2	Exchange Mechanism	161
6.6	Role of the Bridge	163
6.7	Catalyzed Deactivation	164
	References	166
7	Molecular Organic Photochemistry	169
7.1	Introduction	169
7.2	Alkenes and Related Compounds	169

7.2.1	Basic Concepts	169
7.2.2	Photoisomerization of Double Bonds	170
7.2.3	Electrocyclic Processes	172
7.2.4	Sigmatropic Rearrangements	173
7.2.5	Di- π -Methane Reaction	174
7.2.6	Photocycloaddition Reactions	174
7.2.7	Photoinduced Nucleophile, Proton, and Electron Addition	175
7.3	Aromatic Compounds	176
7.3.1	Introduction	176
7.3.2	Photosubstitution	179
7.3.3	Photorearrangement	180
7.3.4	Phototransposition	181
7.3.5	Photocycloadditions	181
7.4	Carbonyl Compounds	182
7.4.1	Introduction	182
7.4.2	Photochemical Primary Processes	183
7.5	Photochemistry of Other Organic Compounds	185
7.5.1	Nitrogen Compounds	185
7.5.1.1	Overview	185
7.5.1.2	Photoisomerization of Azocompounds	186
7.5.2	Saturated Oxygen and Sulfur Compounds	186
7.5.3	Halogen Compounds	187
	References	189
8	Photochemistry and Photophysics of Metal Complexes	191
8.1	Metal Complexes	191
8.2	Photophysical Properties	191
8.3	Photochemical Reactivity	192
8.4	Relationships between Electrochemistry and Photochemistry	194
8.4.1	Cobalt (III) Complexes	195
8.4.2	Copper (I) Complexes	196
8.4.3	Ru(II) Polypyridine Complexes	196
8.4.4	Excited-State Redox Potentials	199
8.5	Luminescent Metal Complexes	201
8.5.1	Polypyridine Metal Complexes	201
8.5.2	Cyclometallated Complexes	203
8.5.2.1	Ruthenium Complexes	204
8.5.2.2	Rhodium Complexes	204
8.5.2.3	Iridium Complexes	205
8.5.2.4	Platinum Complexes	207
8.5.2.5	Orbital Nature of the Emitting Excited State	212
8.5.3	Porphyrin Complexes	213
8.5.4	Chromium (III) Complexes	216
8.5.5	Lanthanoid Complexes	219
8.6	Photochemical Processes	223

8.6.1	Types of Photoreactions	223
8.6.1.1	Photodissociation and Related Reactions	223
8.6.1.2	Photooxidation–Reduction Reactions	224
8.6.1.3	Intramolecular Rearrangements	225
	References	226
9	Interconversion of Light and Chemical Energy by Bimolecular Redox Processes	231
9.1	Light as a Reactant	231
9.2	Light as a Product	232
9.3	Conversion of Light into Chemical Energy	233
9.4	Chemiluminescence	235
9.5	Electrochemiluminescence	235
9.6	Light Absorption Sensitizers	237
9.7	Light Emission Sensitizers	240
	References	242
10	Light-Powered Molecular Devices and Machines	245
10.1	Molecules, Self-Organization, and Covalent Synthetic Design	245
10.2	Light Inputs and Outputs: Reading, Writing, and Erasing	246
10.3	Molecular Devices for Information Processing	247
10.3.1	Photochromic Systems as Molecular Memories	247
10.3.2	Molecular Logics	249
10.3.2.1	Luminescent Sensors as Simple Logic Gates	250
10.3.2.2	AND Logic Gate	251
10.3.2.3	XOR Logic Gate with an Intrinsic Threshold Mechanism	251
10.3.2.4	Encoding and Decoding	253
10.4	Molecular Devices Based on Energy Transfer	255
10.4.1	Wires	255
10.4.2	Switches	257
10.4.3	Plug/Socket Systems	258
10.4.4	Light-Harvesting Antennas	259
10.5	Molecular Devices Based on Electron Transfer	260
10.5.1	Wires	260
10.5.2	Switches	263
10.5.3	Extension Cables	265
10.6	Light-Powered Molecular Machines	268
10.6.1	Basic Remarks	268
10.6.2	The Role of Light	268
10.6.3	Rotary Motors Based on cis–trans Photoisomerization	269
10.6.4	Linear Motions: Molecular Shuttles and Related Systems	271
10.6.5	Photocontrolled Valves, Boxes, and Related Systems	275
	References	276

11	Natural and Artificial Photosynthesis	281
11.1	Energy for Spaceship Earth	281
11.2	Natural Photosynthesis	284
11.2.1	Light Harvesting: Absorption and Energy Transfer	285
11.2.2	Photoinduced Electron Transfer Leading to Charge Separation	285
11.2.2.1	Bacterial Photosynthesis	285
11.2.2.2	Green Plants Photosynthesis: Photosystem II	287
11.2.3	Efficiency of Photosynthesis	288
11.3	Artificial Photosynthesis	290
11.3.1	Artificial Antenna	293
11.3.2	Artificial Reaction Centers	296
11.3.3	Coupling Artificial Antenna and Reaction Center	299
11.3.4	Coupling One-Photon Charge Separation with Multielectron Water Splitting	301
11.4	Water Splitting by Semiconductor Photocatalysis	302
	References	304
12	Experimental Techniques	309
12.1	Apparatus	309
12.1.1	Light Sources	309
12.1.2	Monochromators, Filters, and Solvents	317
12.1.3	Cells and Irradiation Equipment	319
12.1.4	Detectors	321
12.2	Steady-State Absorption and Emission Spectroscopy	323
12.2.1	Absorption Spectroscopy	323
12.2.1.1	Instrumentation	324
12.2.1.2	Qualitative and Quantitative Applications	325
12.2.1.3	Sample Measurement	325
12.2.2	Emission Spectroscopy	326
12.2.2.1	Instrumentation	326
12.2.2.2	Emission Spectra	328
12.2.2.3	Excitation Spectra	329
12.2.2.4	Presence of Spurious Bands	330
12.2.2.5	Quantitative Relationship between Luminescence Intensity and Concentration	331
12.2.2.6	Stern–Volmer Luminescence Quenching	332
12.2.2.7	Emission Quantum Yields	333
12.3	Time-Resolved Absorption and Emission Spectroscopy	335
12.3.1	Transient Absorption Spectroscopy	335
12.3.1.1	Transient Absorption with Nanosecond Resolution	335
12.3.1.2	Transient Absorption with Femtosecond Resolution	337
12.3.2	Emission Lifetime Measurements	338
12.3.2.1	Single Flash	338
12.3.2.2	Gated Sampling	339
12.3.2.3	Upconversion Techniques	339

12.3.2.4	Single-Photon Counting	341
12.3.2.5	Data Analysis	342
12.3.2.6	Phase Shift	343
12.3.2.7	Luminescence Lifetime Standards	345
12.4	Absorption and Emission Measurements with Polarized Light	346
12.4.1	Linear Dichroism	346
12.4.2	Luminescence Anisotropy	347
12.5	Reaction Quantum Yields and Actinometry	349
12.5.1	Reaction Quantum Yields	349
12.5.2	Actinometry	350
12.5.2.1	Potassium Ferrioxalate	351
12.5.2.2	Potassium Reineckate	352
12.5.2.3	Azobenzene	353
12.6	Other Techniques	353
12.6.1	Photothermal Methods	353
12.6.1.1	Photoacoustic Spectroscopy	354
12.6.1.2	Photorefractive Spectroscopy	355
12.6.2	Single-Molecule Spectroscopy	357
12.6.3	Fluorescence Correlation Spectroscopy	358
12.6.4	X-ray Techniques	360
	References	361
13	Light Control of Biologically Relevant Processes	365
13.1	Introduction	365
13.2	Vision	365
13.2.1	Basic Principle	365
13.2.2	Primary Photochemical Events	367
13.3	Light, Skin, and Sunscreens	367
13.4	Photochemical Damage in Living Systems	369
13.4.1	Photochemical Damage to DNA	369
13.4.2	Photochemical Damage to Proteins	369
13.5	Therapeutic Strategies Using Light	370
13.5.1	Phototherapy	370
13.5.2	Photochemotherapy of Psoriasis	370
13.5.3	Photodynamic Therapy	371
13.5.4	Photocontrolled Delivery	373
13.6	Photocatalysis in Environmental Protection	375
13.6.1	Principles	375
13.6.2	Solar Disinfection (SODIS)	375
13.6.3	Photoassisted Fenton Reaction	376
13.6.4	Heterogeneous Photocatalysis	376
13.7	DNA Photocleavage and Charge Transport	377
13.7.1	Photocleaving Agents of Nucleic Acid	377
13.7.2	Photoinduced Electron-Transfer Processes in DNA	378
13.8	Fluorescence	379

13.9	Bioluminescence	379
