Preface *XXI*

List of Contributors *XXIII*

Volume One: Synthesis and Processing

Part One Sol–Gel Chemistry and Methods *1*

1 Chemistry and Fundamentals of the Sol–Gel Process *3*

Ulrich Schubert

- 1.1 Introduction *3*
- 1.2 Hydrolysis and Condensation Reactions *4*
 - 1.2.1 Silica-Based Materials *4*
 - 1.2.1.1 Precursor(s) *9*
 - 1.2.1.2 Catalyst (pH) *9*
 - 1.2.1.3 Alkoxo Group/H₂O Ratio (*R_w*) *9*
 - 1.2.1.4 Solvent *10*
 - 1.2.1.5 Electrolytes *10*
 - 1.2.2 Metal Oxide-Based Materials *11*
- 1.3 Sol–Gel Transition (Gelation) *17*
 - 1.3.1 Hydrolytic Sol–Gel Processes *17*
 - 1.3.2 Nonhydrolytic Sol–Gel Processes *22*
 - 1.3.3 Inorganic–Organic Hybrid Materials *22*
- 1.4 Aging and Drying *24*
- 1.5 Postsynthesis Processing *26*
- 1.6 Concluding Remarks *26*
 - References *27*

2 Nonhydrolytic Sol–Gel Methods *29*

Rupali Deshmukh and Markus Niederberger

- 2.1 Introduction *29*
- 2.2 Nonaqueous Sol–Gel Routes to Metal Oxide Nanoparticles *31*
 - 2.2.1 Surfactant-Assisted Synthesis *31*

2.2.2	Solvent-Controlled Synthesis	33
2.2.2.1	Benzyl Alcohol Route	33
2.2.2.2	<i>tert</i> -Butyl Alcohol Route	37
2.2.2.3	Ether Route	37
2.2.2.4	Acetophenone Route	38
2.2.2.5	Carboxylic Acid Route	39
2.2.2.6	Benzylamine Route	39
2.2.3	Microwave-Assisted Synthesis	40
2.3	Nonaqueous Sol–Gel Synthesis beyond Metal Oxides	43
2.3.1	Composites	43
2.3.2	Organic–Inorganic Hybrid Materials	44
2.3.3	Metal Sulfides	46
2.3.4	Metals	47
2.4	Chemical Reaction and Crystallization Mechanisms	48
2.4.1	Introduction	48
2.4.2	Overview of the Main Chemical Reactions	49
2.4.3	Classical and Nonclassical Crystallization Mechanisms	51
2.4.4	Selected Examples	51
2.5	Assembly and Processing	56
2.5.1	Introduction	56
2.5.2	Nanoparticle Arrays and Superlattices	57
2.5.3	Oriented Attachment and Mesocrystals	59
2.5.4	Films	60
2.6	Summary and Outlook	63
	References	63
3	Integrative Sol–Gel Chemistry	71
	<i>M. Depardieu, N. Kinadjian, D. Portehault, R. Backov, and Clément Sanchez</i>	
3.1	Introduction	71
3.2	Design of 0D Structures	72
3.2.1	Aerosol Processing	72
3.2.2	Capsules	75
3.2.2.1	Simple Emulsions Preparation	76
3.2.2.2	Mineralization of the Wax Dispersion	76
3.2.2.3	Temperature-Triggered Release	77
3.2.2.4	Introducing a Hydrophilic Compartment	79
3.2.2.5	Water@Wax@Water Emulsion Formulation	80
3.2.2.6	Water@Wax@Water Emulsion Mineralization	80
3.2.2.7	Temperature-Triggered Release	81
3.2.2.8	Wax@Water@Oil Emulsion Formulation	83
3.2.2.9	Wax@Water@Oil Emulsion Mineralization	84
3.2.2.10	Temperature-Triggered Release	85
3.3	Design of 1D Macroscopic Structures	88
3.3.1	Electrospinning	89
3.3.1.1	A First Case: TiO ₂ Fibers for Dye-Sensitized Solar Cells	89

3.3.1.2	Coupling Sol–Gel Reactions and Electrospinning	90
3.3.2	Extrusion	93
3.3.2.1	V ₂ O ₅ Fibers as Alcohol Sensor	94
3.3.2.2	Composite Fibers Prepared with the Help of Polymer Dehydration/ Reticulation	96
3.4	Design of Extended 2D Structures	99
3.5	Design of Extended 3D Structures	99
3.5.1	Foams	99
3.5.1.1	Silica Foams: Si-(HIPE)	101
3.5.1.2	Eu ³⁺ @Organo-Si-(HIPE): Photonic Properties	101
3.5.1.3	Pd@Organo-Si-(HIPE): Cycling Heck Catalysis Reactions	103
3.5.1.4	Enzyme@Organo-Si-(HIPE): High Efficiency Biocatalysts	104
3.5.1.5	Si-(HIPE) as Hard Template to Carbonaceous Foams and Applications	106
3.5.1.6	Carbon-(HIPE) as Li Ion Negative Electrodes	107
3.5.1.7	LiBH ₄ @Carbon-(HIPE) for Hydrogen Storage and Release	107
3.5.2	Aerogels	112
3.5.3	Dense Nanostructured Monoliths	112
3.6	Conclusions	113
	References	115
4	Synthetic Self-Assembly Strategies and Methods	121
	<i>Alexandra Zamboulis, Olivier Dautel, and Joël J.E. Moreau</i>	
4.1	Introduction	121
4.2	Templated Synthesis of Inorganic Materials	122
4.2.1	Self-Assembly of Mesoporous Silicas	123
4.2.2	Hydrothermal Rearrangement and Postsynthesis Treatment	125
4.2.3	Self-Assembly of Thin Films	126
4.2.4	Self-Assembly of Functionalized Mesoporous Silicas	127
4.3	Self-Assembled Organosilicas	128
4.3.1	Control of the Pore Structure: Templated Synthesis of Mesoporous Bridged Silsesquioxanes	129
4.3.2	Self-Organized Organosilicas	132
4.3.3	Self-Assembly Synthetic Strategies for Organosilicas with Optical Properties	139
4.3.3.1	Toward an H-Aggregation/Card Pack Stacking	141
4.3.3.2	From a J- to an H-Aggregation	149
4.3.3.3	Transcription of the J-Aggregation from the Precursor to the Material	153
4.4	Conclusions	154
	References	154
5	Processing of Sol–Gel Films from a Top-Down Route	165
	<i>Plinio Innocenzi and Luca Malfatti</i>	
5.1	Introduction	165

5.2	Top-Down Processing by UV Photoirradiation	167
5.2.1	UV Curing of Oxides	167
5.2.2	UV Curing of Hybrid Sol–Gel Films	169
5.2.3	UV Photoirradiation of Mesoporous Films	170
5.2.4	Nanocomposite Sol–Gel Films by UV Photoirradiation	173
5.3	Laser Irradiation and Writing	174
5.3.1	Thermal-Induced Effects	174
5.3.2	Laser-Induced Microfabrication	175
5.3.3	Nanofabrication by Two- or Multiphoton Absorption	177
5.4	Electron Beam Lithography	178
5.5	Top-Down Processing by Hard X-Rays	181
5.6	Soft X-Ray Lithography	184
	References	186
6	Sol–Gel Precursors	195
	<i>Vadim G. Kessler</i>	
6.1	Introduction	195
6.2	Simple Silicon Alkoxides	196
6.3	Functional and Mixed Ligand Silicon Alkoxides for More Facile Hydrolysis	197
6.4	Functional Silicon Alkoxides: Precursors of Hybrid Materials	198
6.5	Simple Metal Alkoxides	200
6.5.1	Commercially Available Simple Metal Alkoxide	202
6.5.2	Customary Synthesis of Metal Alkoxide Precursors	209
6.5.2.1	Interaction of Metals with Alcohols	209
6.5.2.2	Alcoholysis of Complexes Derived from Volatile Acids Weaker Than Alcohols	209
6.5.2.3	Basic Alcoholysis of Metal Halides: Metathesis Reaction	210
6.5.2.4	Alcoholysis of Metal Oxides	210
6.5.2.5	Electrochemical Oxidation of Metals in Alcohols	211
6.5.2.6	Alcohol Interchange Reaction	211
6.6	Functional and Mixed Ligand Metal Alkoxides for More Facile Hydrolysis and Stabilization of Resulting Colloids	212
6.7	Precursor and Solvent Choice for Nonhydrolytic Sol–Gel Processes	213
6.8	Synthesis of Complex Materials: Single-Source Precursor Approach	214
6.9	Sol–Gel Precursors for Special Applications: Biomedical and Luminescent	215
	Abbreviations	216
	References	216

Part Two Sol–Gel Materials 225

7	Nanoparticles and Composites	227
	<i>Guido Kickelbick</i>	
7.1	Introduction	227

7.2	Aqueous Sol–Gel Process	228
7.2.1	Silica Nanoparticles	228
7.2.1.1	Properties of Silica Nanoparticles	230
7.2.2	Metal Oxides	231
7.3	Nonaqueous Sol–Gel Process	232
7.3.1	Metal Oxides	232
7.4	Surface Functionalization of Nanoparticles	234
7.5	Nanocomposites	236
7.5.1	Dispersion of Silica Nanoparticles in Polymer Matrices	237
7.5.2	In Situ Production of Silica Particles in a Polymer Matrix	237
7.5.3	Melt Production of Silica Particles in a Polymer Matrix	238
7.5.4	Properties of Nanoparticle Polymer Nanocomposites	238
7.6	Conclusions	239
	References	239
8	Oxide Powders and Ceramics	245
	<i>Maria Zaharescu and Luminita Predoana</i>	
8.1	Oxide Powders Obtained by Sol–Gel Methods	245
8.2	Ceramics from Sol–Gel Oxide Powders	248
8.3	Pure and Doped Single Oxide Ceramics	249
8.3.1	Nanocrystalline Yttria	249
8.3.2	Gd-Doped Ceria	249
8.4	Multicomponent Ceramics	250
8.4.1	Zirconium Titanate	250
8.4.2	Lead Titanate	251
8.4.3	Zr-Doped PbTiO_3	251
8.4.4	Nb-Doped PZT	252
8.4.5	W-Doped PZT	252
8.4.6	Ca-Doped PbTiO_3	253
8.4.7	Barium Titanate	255
8.4.8	(Er, Yb)-Doped BaTiO_3	256
8.4.9	Barium Strontium Titanate	256
8.4.10	Co-Doped Barium Strontium Titanate	257
8.4.11	Mg-Doped Barium Strontium Titanate	257
8.4.12	Magnesium Titanate	257
8.4.13	B-Doped MgTiO_3	258
8.4.14	Calcium Titanate	258
8.4.15	CaTiO_3 –(Sm, Nd) AlO_3 Solid Solution	259
8.4.16	(Co, Cu)-Doped Calcium Titanate	259
8.4.17	(Na, K)-Doped Bismuth Titanate	260
8.4.18	Mg-Doped Barium Tantalate	261
8.4.19	Lead-Free $\text{Ba}(\text{Fe}_{0.5}\text{Nb}_{0.5})\text{O}_3$	261
8.4.20	B-Doped $\text{Mg}_4\text{Nb}_2\text{O}_9$	261
8.4.21	Ce-Doped Lutetium Aluminum Garnet	262
8.4.22	Ce-Doped Barium Yttrium Garnet	263

8.4.23	Aluminum Titanate	263
8.4.24	Magnesium Aluminum Titanate	264
8.4.25	Lanthanum Cobaltite	265
8.5	Composite Ceramics	266
8.5.1	$\text{Al}_2\text{O}_3\text{--ZrO}_2$ Nanocomposite	266
8.5.2	Alumina–Yttrium Aluminum Garnet	269
8.6	Conclusions	269
	References	270

Volume Two: Characterization and Properties of Sol-Gel Materials

Part Three Characterization Techniques for Sol-Gel Materials 651

- 20 **Solid-State NMR Characterization of Sol-Gel Materials:
Recent Advances** 653
Florence Babonneau, Christian Bonhomme
- 21 **Time-Resolved Small-Angle X-Ray Scattering** 673
Johan E. ten Elshof, Rogier Besselink, Tomasz M. Stawski, Hessel L. Castricum
- 22 **Characterization of Sol-Gel Materials by Optical Spectroscopy
Methods** 713
Rui M. Almeida, Jian Xu
- 23 **Properties and Applications of Sol-Gel Materials: Functionalized Porous
Amorphous Solids (Monoliths)** 745
Kazuki Nakanishi
- 24 **Sol-Gel Deposition of Ultrathin High- κ Dielectric Films** 767
An Hardy, Marlies K. Van Bael

Part Four Properties 787

- 25 **Functional (Meso)Porous Nanostructures** 789
Andrea Feinle, Nicola Hüsing
- 26 **Sol-Gel Magnetic Materials** 813
*Lucía Gutiérrez, Sabino Veintemillas-Verdaguer, Carlos J. Serna,
María del Puerto Morales*
- 27 **Sol-Gel Electroceramic Thin Films** 841
María Lourdes Calzada
- 28 **Organic-Inorganic Hybrids for Lighting** 883
Vânia Teixeira Freitas, Rute Amorim S. Ferreira, Luis D. Carlos
- 29 **Sol-Gel TiO₂ Materials and Coatings for Photocatalytic
and Multifunctional Applications** 911
Yolanda Castro, Alicia Durán
- 30 **Optical Properties of Luminescent Materials** 929
*Sidney J.L. Ribeiro, Molíria V. dos Santos, Robson R. Silva, Édison Pecoraro,
Rogéria R. Gonçalves, José Maurício A. Caiut*

- 31 **Better Catalysis with Organically Modified Sol–Gel Materials** 963
David Avnir, Jochanan Blum, Zackaria Nairoukh
- 32 **Hierarchically Structured Porous Materials** 987
Ming-Hui Sun, Li-Hua Chen, Bao-Lian Su
- 33 **Structures and Properties of Ordered Nanostructured Oxides
and Composite Materials** 1031
María Luz Martínez Ricci, Sara A. Bilmes

Volume Three: Application of Sol-Gel Materials

Part Five Applications 1055

- 34 **Sol–Gel for Environmentally Green Products** 1057
Rosaria Ciriminna, Mario Pagliaro, Giovanni Palmisano
- 35 **Sol–Gel Materials for Batteries and Fuel Cells** 1071
Jadra Mosa, Mario Aparicio
- 36 **Sol–Gel Materials for Energy Storage** 1119
Leland Smith, Ryan Maloney, Bruce Dunn
- 37 **Sol–Gel Materials for Pigments and Ceramics** 1145
Guillermo Monrós
- 38 **Sol–Gel for Gas Sensing Applications** 1173
Enrico Della Gaspera, Massimo Guglielmi, Alessandro Martucci
- 39 **Reinforced Sol–Gel Silica Coatings** 1207
Antonio Julio López, Joaquín Rams
- 40 **Sol–Gel Optical and Electro-Optical Materials** 1239
Marcos Zayat, David Almendro, Virginia Vadillo, David Levy
- 41 **Luminescent Solar Concentrators and the Ways to
Increase Their Efficiencies** 1281
Renata Reisfeld
- 42 **Mesoporous Silica Nanoparticles for Drug Delivery and Controlled
Release Applications** 1309
Montserrat Colilla, Alejandro Baeza, María Vallet-Regí
- 43 **Sol–Gel Materials for Biomedical Applications** 1345
Julian R. Jones
