List of Contributors XI

1	Introduction: Zinc Catalysts for Organic Transformations	1
	<i>Stephan Enthaler and Xiao-Feng Wu</i>	
	References	3
2	Zinc-Catalyzed Reductions of Unsaturated Compounds	5
	<i>Yuehui Li, Kathrin Junge, and Matthias Beller</i>	
2.1	Introduction	5
2.2	Hydrosilylation of Unsaturated Compounds	5
2.2.1	Nonchiral Hydrosilylation of Carbonyl Bonds	6
2.2.2	Asymmetric Hydrosilylation of C=O Bonds	14
2.2.3	Zinc-Catalyzed Hydrosilylation of C=N and Other Multiple Bonds	19
2.3	Hydrogenation	25
2.4	Transfer Hydrogenation of Unsaturated Compounds	28
2.5	Concluding Remarks	29
	References	29
3	Zinc-Catalyzed Oxidation Reactions	33
	<i>Liang-Qiu Lu and Xiao-Feng Wu</i>	
3.1	Introduction	33
3.2	Oxidative Transformation of Alkenes	34
3.3	Oxidative Transformation of Aldehydes	38
3.4	Oxidative Transformation of C–X Bonds (X=O, N, and S)	42
3.5	Oxidative Functionalization of sp^3 C–H Bonds	49
3.6	Other Oxidative Reactions with Redox-Active Ligands	50
3.7	Summary and Outlook	53
	References	53
4	Zinc-Catalyzed Friedel–Crafts Reactions	57
	<i>Yonghai Hui, Lili Lin, Xiaohua Liu, and Xiaoming Feng</i>	
4.1	Introduction	57

4.2	Friedel–Crafts Acylation	58
4.3	Friedel–Crafts Alkylations	59
4.3.1	Racemic Friedel–Crafts Alkylation	60
4.3.2	Asymmetric Friedel–Crafts Alkylations	64
4.3.2.1	Friedel–Crafts Alkylations Catalyzed by Chiral Oxazoline/Imidazoline-Zinc(II) Complexes	64
4.3.2.2	Chiral Dinuclear Zinc(II) Complexes as Precatalysts	73
4.3.2.3	Chiral <i>N,N'</i> -Dioxide-Zinc(II) Complexes as Precatalysts	74
4.3.2.4	Chiral (R)-BINAM Based Imine-Zinc(II) Precatalysts	77
4.3.2.5	Chiral Schiff Base-Zinc(II) Complex as Precatalyst	77
4.3.2.6	Chiral Diamines/Thiourea-Zinc(II) Complexes Precatalysts	78
4.3.2.7	Chiral Bipyridine-Zinc(II) Complex as the Precatalyst	79
4.4	Conclusions	80
	References	80
5	Zinc-Catalyzed Hydroamination Reactions	83
	<i>Tianshu Li, Jelena Wiecko, and Peter W. Roesky</i>	
5.1	Introduction	83
5.2	Inorganic Zinc Salts as Catalysts	85
5.3	Aminotroponimate Zinc Complexes as Catalysts	93
5.3.1	Aminotroponimate Zinc Complex as a Hydroamination Catalyst	93
5.3.2	Modifications of Aminotroponimate Zinc Complexes	95
5.3.3	Aminotroponimate Zinc Complex Immobilized on Mesoporous Silica	101
5.4	Other Zinc Organometallic Compounds as Catalysts	104
5.4.1	Other Zn–N Complexes	104
5.4.2	ZnEt ₂ , [Cp* ₂ Zn ₂], and [Cp* ₂ Zn] as Hydroamination Precatalysts	110
5.5	Double Metal Cyanide Catalysts	114
5.6	Summary	115
	References	115
6	Zinc-Catalyzed C–C Bond Formation	119
	<i>Rubén Vicente</i>	
6.1	Introduction	119
6.2	Zinc-Catalyzed Aldol-Type Reactions	120
6.2.1	Zinc-Catalyzed Aldol and Mukaiyama-Aldol Reactions	120
6.2.2	Zinc-Catalyzed Michael Addition Reactions	123
6.2.3	Zinc-Catalyzed Henry and Aza-Henry Reactions	126
6.2.4	Zinc-Catalyzed Mannich-Type Reactions	127
6.3	Zinc-Catalyzed Cycloaddition Reactions	127
6.4	Zinc-Catalyzed Addition of Organometallic Reagents to Carbonyl and Related Compounds	129
6.4.1	Alkylation Reactions with Grignard Reagents	129

6.4.2	Allylation, Propargylation, and Allenylation Reactions with Organometallic Reagents	130
6.4.3	Catalytic Acetylide Addition Reactions	132
6.5	Zinc-Catalyzed Cross-Coupling Reactions	133
6.6	Radical Reactions Involving Catalytic Amounts of Zinc	134
6.7	Zinc-Catalyzed Reactions through Alkyne Activation	135
6.8	Zinc-Catalyzed Cyclopropanation Reactions	139
6.9	Other Zinc-Catalyzed Reactions	141
6.10	Summary and Outlook	142
	References	143
7	Zinc-Catalyzed C–N and C–O Bond Formation Reactions	149
	<i>Luis A. López and Jesús González</i>	
7.1	Introduction	149
7.2	Zinc-Catalyzed C–N Bond Formation Reactions	150
7.2.1	Zinc-Catalyzed Hydroamination Reactions and Related Processes	150
7.2.1.1	Aminotroponimate and Related Zinc Complexes as Precatalysts for the Intramolecular Hydroamination of Alkynes and Alkenes	151
7.2.1.2	Metallocene-Based Precatalysts for Inter- and Intramolecular Hydroaminations	152
7.2.1.3	Diethylzinc and ZnX_2 (X=Halogen, OTf) as Precatalysts for Inter- and Intramolecular Hydroaminations	153
7.2.1.4	Zinc-Catalyzed Cascade Reactions Initiated by Inter- and Intramolecular Hydroaminations of Alkenes and Alkynes	154
7.2.2	Zinc-Catalyzed Reactions of Carbonyl Compounds or Carboxylic Acid Derivatives with Amines and Related Compounds	156
7.2.3	Zinc-Catalyzed Reactions Involving Azides and Diazocompounds	159
7.2.4	Zinc-Catalyzed <i>-N</i> -Functionalization of C–H Bonds	162
7.2.5	Zinc-Catalyzed C–N Bond-Forming Reactions Involving the Cleavage of Cyclopropanes and Epoxides	163
7.3	Zinc-Catalyzed C–O Bond Formation Reactions	164
7.3.1	Zinc-Catalyzed C–O Bond Formation Involving Intramolecular Cyclization	164
7.3.2	Zinc-Catalyzed Transesterifications and Amide Cleavages	167
7.3.3	Zinc-Catalyzed Michael Addition/Cyclization Sequence	171
7.3.4	Zinc-Catalyzed Hetero-Diels–Alder Reactions of Aldehydes and Functionalized Dienes	171
7.3.5	Zinc-Catalyzed Multicomponent Reactions	172
7.4	Summary and Conclusion	174
	References	175

8	Zinc-Catalyzed Transformation of Carbon Dioxide	179
	<i>Stefan Kissling, Peter T. Altenbuchner, Teemu Niemi, Timo Repo, and Bernhard Rieger</i>	
8.1	Introduction	179
8.2	Zinc Catalysts for the Copolymerization of Epoxides and CO ₂	181
8.2.1	Mechanistic Aspects of CO ₂ /Epoxide Copolymerization	181
8.2.2	Heterogeneous Catalysts	182
8.2.3	Homogeneous Catalysts	185
8.2.3.1	Catalyst Development	185
8.2.3.2	Asymmetric Copolymerization	192
8.2.4	Functional Polycarbonates	194
8.3	Zinc-Catalyzed Synthesis of Cyclic Carbonates Utilizing Carbon Dioxide as a Chemical Feedstock	196
8.3.1	Cyclic Carbonates from Cycloaddition of CO ₂ to Epoxides	196
8.3.1.1	Catalyst Systems and Substrate Scale	196
8.3.1.2	Effect of Reaction Conditions on Cycloaddition Efficiency	198
8.3.1.3	Oxidative Carboxylation	199
8.3.1.4	Reaction Mechanism	199
8.3.2	Cyclization of Carbon Dioxide and Diols	200
8.4	Summary	201
	References	202
9	Zinc-Catalyzed Depolymerization Reactions	207
	<i>Stephan Enthaler</i>	
9.1	Introduction	207
9.2	Zinc-Catalyzed Depolymerization of Polyethers	208
9.3	Zinc-Catalyzed Depolymerization of Polyesters	212
9.4	Zinc-Catalyzed Depolymerization of Silicones	214
9.5	Summary	215
	References	215
10	Applications of Zinc-Promoted Reaction in Total Synthesis	219
	<i>Hui Liu and Xuefeng Jiang</i>	
10.1	Introduction	219
10.2	Zinc-Promoted Reactions without Ligands	219
10.2.1	Zinc-Catalyzed Reactions	219
10.2.2	Zinc-Mediated Reactions	224
10.3	Zinc-Mediated Reactions with Ligands	243
10.3.1	Zinc-Catalyzed Reactions	243
10.3.2	Zinc-Mediated Reactions	252
10.4	Other Zinc-Promoted Reactions	262
	References	271

11	Application of Organozinc Reagents in Oxidative Coupling Reactions	275
	<i>Aiwen Lei, Zhiliang Huang, and Dong Liu</i>	
11.1	Introduction	275
11.1.1	Oxidative Coupling	276
11.1.2	Organozinc Reagents	277
11.1.3	Preparation of Organozinc Reagents	277
11.1.3.1	Organozinc Halides	277
11.1.3.2	Diorganozincs	279
11.1.3.3	Lithium or Magnesium Zincates	279
11.1.4	Organozinc Halides	280
11.1.4.1	Structures of Organozinc Halides	280
11.1.4.2	Properties of Organozinc Halides	281
11.2	Oxidative Coupling between Zinc Reagents and C(sp) Nucleophiles	283
11.3	Oxidative Coupling between Organozinc Reagents and C(sp ²) Nucleophiles	287
11.3.1	C(sp ²)-M Compounds as Nucleophiles	287
11.3.2	C(sp ²)-H Compounds as Nucleophiles	289
11.4	Oxidative Coupling between Organozinc Reagents and C(sp ³) Nucleophiles	292
11.4.1	Oxidative Coupling between Organozinc Reagents and C(sp ³)-Organometallic Reagents	292
11.4.2	Oxidative Coupling between Organozinc Reagents and C(sp ³)-H Compounds	295
11.5	Oxidative Coupling between Organozinc Reagents and Heteroatom Nucleophiles	296
11.5.1	C–N Bond Formation	296
11.5.2	C–O Bond Formation	298
11.6	Conclusion	299
	References	299
