Preface	xi		
Guide to Different Topics of the Book	xiii		
About the Authors	xv		
Part One Introduction to Systems Biology	1		
1 Introduction	3		
1.1 Biology in Time and Space	3		
1.2 Models and Modeling	4		
1.2.1 What Is a Model?	4		
1.2.2 Purpose and Adequateness of Models	5		
1.2.3 Advantages of Computational Modeling	5		
1.3 Basic Notions for Computational Models	6		
1.3.1 Model Scope	6		
1.3.2 Model Statements	6		
1.3.3 System State	6		
1.3.4 Variables, Parameters, and Constants	6		
1.3.5 Model Behavior	7		
1.3.6 Model Classification	7		
1.3.7 Steady States	7		
1.3.8 Model Assignment Is Not Unique	7		
1.4 Networks	8		
1.5 Data Integration	8		
1.6 Standards	9		
1.7 Model Organisms	9		
1.7.1 <i>Escherichia coli</i>	9		
1.7.2 <i>Saccharomyces cerevisiae</i>	11		
1.7.3 <i>Caenorhabditis elegans</i>	11		
1.7.4 <i>Drosophila melanogaster</i>	11		
1.7.5 <i>Mus musculus</i>	12		
References	12		
Further Reading	14		
2 Modeling of Biochemical Systems	15		
2.1 Overview of Common Modeling Approaches for Biochemical Systems	15		
2.2 ODE Systems for Biochemical Networks	17		
2.2.1 Basic Components of ODE Models	18		
2.2.2 Illustrative Examples of ODE Models	18		
References	21		
Further Reading	21		
3 Structural Modeling and Analysis of Biochemical Networks	23		
3.1 Structural Analysis of Biochemical Systems	24		
3.1.1 System Equations	24		
3.1.2 Information Encoded in the Stoichiometric Matrix N	25		
3.1.3 The Flux Cone	27		
3.1.4 Elementary Flux Modes and Extreme Pathways	27		
3.1.5 Conservation Relations – Null Space of N^T	29		
3.2 Constraint-Based Flux Optimization	30		
3.2.1 Flux Balance Analysis	31		
3.2.2 Geometric Interpretation of Flux Balance Analysis	31		
3.2.3 Thermodynamic Constraints	31		
3.2.4 Applications and Tests of the Flux Optimization Paradigm	32		
3.2.5 Extensions of Flux Balance Analysis	33		
Exercises	35		
References	36		
Further Reading	37		
4 Kinetic Models of Biochemical Networks: Introduction	39		
4.1 Reaction Kinetics and Thermodynamics	39		
4.1.1 Kinetic Modeling of Enzymatic Reactions	39		
4.1.2 The Law of Mass Action	40		
4.1.3 Reaction Thermodynamics	40		
4.1.4 Michaelis–Menten Kinetics	42		
4.1.5 Regulation of Enzyme Activity by Effectors	44		
4.1.6 Generalized Mass Action Kinetics	48		
4.1.7 Approximate Kinetic Formats	48		
4.1.8 Convenience Kinetics and Modular Rate Laws	49		
4.2 Metabolic Control Analysis	50		
4.2.1 The Coefficients of Control Analysis	51		

- 4.2.2 The Theorems of Metabolic Control Theory 53
- 4.2.3 Matrix Expressions for Control Coefficients 55
- 4.2.4 Upper Glycolysis as Realistic Model Example 58
- 4.2.5 Time-Dependent Response Coefficients 59
- Exercises 61
- References 61
- Further Reading 62

- 5 Data Formats, Simulation Techniques, and Modeling Tools 63**
- 5.1 Simulation Techniques and Tools 63**
- 5.1.1 Differential Equations 63
- 5.1.2 Stochastic Simulations 64
- 5.1.3 Simulation Tools 65
- 5.2 Standards and Formats for Systems Biology 72**
- 5.2.1 Systems Biology Markup Language 72
- 5.2.2 BioPAX 74
- 5.2.3 Systems Biology Graphical Notation 74
- 5.3 Data Resources for Modeling of Cellular Reaction Systems 75**
- 5.3.1 General-Purpose Databases 75
- 5.3.2 Pathway Databases 76
- 5.3.3 Model Databases 77
- 5.4 Sustainable Modeling and Model Semantics 78**
- 5.4.1 Standards for Systems Biology Models 78
- 5.4.2 Model Semantics and Model Comparison 78
- 5.4.3 Model Combination 80
- 5.4.4 Model Validity 82
- References 83
- Further Reading 85

- 6 Model Fitting, Reduction, and Coupling 87**
- 6.1 Parameter Estimation 88**
- 6.1.1 Regression, Estimators, and Maximal Likelihood 88
- 6.1.2 Parameter Identifiability 90
- 6.1.3 Bootstrapping 91
- 6.1.4 Bayesian Parameter Estimation 92
- 6.1.5 Probability Distributions for Rate Constants 94
- 6.1.6 Optimization Methods 97
- 6.2 Model Selection 99**
- 6.2.1 What Is a Good Model? 99
- 6.2.2 The Problem of Model Selection 100
- 6.2.3 Likelihood Ratio Test 102
- 6.2.4 Selection Criteria 102
- 6.2.5 Bayesian Model Selection 103
- 6.3 Model Reduction 104**
- 6.3.1 Model Simplification 104
- 6.3.2 Reduction of Fast Processes 105
- 6.3.3 Quasi-Equilibrium and Quasi-Steady State 107
- 6.3.4 Global Model Reduction 108

- 6.4 Coupled Systems and Emergent Behavior 110**
- 6.4.1 Modeling of Coupled Systems 111
- 6.4.2 Combining Rate Laws into Models 113
- 6.4.3 Modular Response Analysis 113
- 6.4.4 Emergent Behavior in Coupled Systems 114
- 6.4.5 Causal Interactions and Global Behavior 115
- Exercises 116
- References 117
- Further Reading 119

- 7 Discrete, Stochastic, and Spatial Models 121**
- 7.1 Discrete Models 122**
- 7.1.1 Boolean Networks 122
- 7.1.2 Petri Nets 124
- 7.2 Stochastic Modeling of Biochemical Reactions 127**
- 7.2.1 Chance in Biochemical Reaction Systems 127
- 7.2.2 The Chemical Master Equation 129
- 7.2.3 Stochastic Simulation 129
- 7.2.4 Chemical Langevin Equation and Chemical Noise 130
- 7.2.5 Dynamic Fluctuations 132
- 7.2.6 From Stochastic to Deterministic Modeling 133
- 7.3 Spatial Models 133**
- 7.3.1 Types of Spatial Models 134
- 7.3.2 Compartment Models 135
- 7.3.3 Reaction–Diffusion Systems 136
- 7.3.4 Robust Pattern Formation in Embryonic Development 138
- 7.3.5 Spontaneous Pattern Formation 139
- 7.3.6 Linear Stability Analysis of the Activator–Inhibitor Model 140
- Exercises 142
- References 143
- Further Reading 144

- 8 Network Structure, Dynamics, and Function 145**
- 8.1 Structure of Biochemical Networks 146**
- 8.1.1 Random Graphs 147
- 8.1.2 Scale-Free Networks 148
- 8.1.3 Connectivity and Node Distances 149
- 8.1.4 Network Motifs and Significance Tests 150
- 8.1.5 Explanations for Network Structures 151
- 8.2 Regulation Networks and Network Motifs 152**
- 8.2.1 Structure of Transcription Networks 153
- 8.2.2 Regulation Edges and Their Steady-State Response 156
- 8.2.3 Negative Feedback 156
- 8.2.4 Adaptation Motif 157
- 8.2.5 Feed-Forward Loops 158

- 8.3 Modularity and Gene Functions 160**
- 8.3.1 Cell Functions Are Reflected in Structure, Dynamics, Regulation, and Genetics 160
- 8.3.2 Metabolic Pathways and Elementary Modes 162
- 8.3.3 Epistasis Can Indicate Functional Modules 163
- 8.3.4 Evolution of Function and Modules 163
- 8.3.5 Independent Systems as a Tacit Model Assumption 165
- 8.3.6 Modularity and Biological Function Are Conceptual Abstractions 165
- Exercises 166
- References 167
- Further Reading 169
- 9 Gene Expression Models 171**
- 9.1 Mechanisms of Gene Expression Regulation 171**
- 9.1.1 Transcription Factor-Initiated Gene Regulation 171
- 9.1.2 General Promoter Structure 173
- 9.1.3 Prediction and Analysis of Promoter Elements 174
- 9.1.4 Posttranscriptional Regulation through microRNAs 176
- 9.2 Dynamic Models of Gene Regulation 180**
- 9.2.1 A Basic Model of Gene Expression and Regulation 180
- 9.2.2 Natural and Synthetic Gene Regulatory Networks 183
- 9.2.3 Gene Expression Modeling with Stochastic Equations 186
- 9.3 Gene Regulation Functions 187**
- 9.3.1 The Lac Operon in *E. coli* 187
- 9.3.2 Gene Regulation Functions Derived from Equilibrium Binding 188
- 9.3.3 Thermodynamic Models of Promoter Occupancy 189
- 9.3.4 Gene Regulation Function of the Lac Promoter 191
- 9.3.5 Inferring Transcription Factor Activities from Transcription Data 192
- 9.3.6 Network Component Analysis 194
- 9.3.7 Correspondences between mRNA and Protein Levels 196
- 9.4 Fluctuations in Gene Expression 196**
- 9.4.1 Stochastic Model of Transcription and Translation 197
- 9.4.2 Intrinsic and Extrinsic Variability 200
- 9.4.3 Temporal Fluctuations in Gene Cascades 202
- Exercises 203
- References 205
- Further Reading 207
- 10 Variability, Robustness, and Information 209**
- 10.1 Variability and Biochemical Models 210**
- 10.1.1 Variability and Uncertainty Analysis 210
- 10.1.2 Flux Sampling 212
- 10.1.3 Elasticity Sampling 213
- 10.1.4 Propagation of Parameter Variability in Kinetic Models 214
- 10.1.5 Models with Parameter Fluctuations 216
- 10.2 Robustness Mechanisms and Scaling Laws 217**
- 10.2.1 Robustness in Biochemical Systems 218
- 10.2.2 Robustness by Backup Elements 219
- 10.2.3 Feedback Control 219
- 10.2.4 Perfect Robustness by Structure 222
- 10.2.5 Scaling Laws 224
- 10.2.6 Time Scaling, Summation Laws, and Robustness 227
- 10.2.7 The Role of Robustness in Evolution and Modeling 228
- 10.3 Adaptation and Exploration Strategies 229**
- 10.3.1 Information Transmission in Signaling Pathways 230
- 10.3.2 Adaptation and Fold-Change Detection 230
- 10.3.3 Two Adaptation Mechanisms: Sensing and Random Switching 231
- 10.3.4 Shannon Information and the Value of Information 232
- 10.3.5 Metabolic Shifts and Anticipation 233
- 10.3.6 Exploration Strategies 234
- Exercises 236
- References 237
- Further Reading 239
- 11 Optimality and Evolution 241**
- 11.1 Optimality in Systems Biology Models 243**
- 11.1.1 Mathematical Concepts for Optimality and Compromise 245
- 11.1.2 Metabolism Is Shaped by Optimality 248
- 11.1.3 Optimality Approaches in Metabolic Modeling 250
- 11.1.4 Metabolic Strategies 252
- 11.1.5 Optimal Metabolic Adaptation 253
- 11.2 Optimal Enzyme Concentrations 255**
- 11.2.1 Optimization of Catalytic Properties of Single Enzymes 255
- 11.2.2 Optimal Distribution of Enzyme Concentrations in a Metabolic Pathway 257
- 11.2.3 Temporal Transcription Programs 259
- 11.3 Evolution and Self-Organization 261**
- 11.3.1 Introduction 261
- 11.3.2 Selection Equations for Biological Macromolecules 263
- 11.3.3 The Quasispecies Model: Self-Replication with Mutations 265

- 11.3.4 The Hypercycle 267
- 11.3.5 Other Mathematical Models of Evolution: Spin Glass Model 269
- 11.3.6 The Neutral Theory of Molecular Evolution 270
- 11.4 Evolutionary Game Theory 271**
 - 11.4.1 Social Interactions 272
 - 11.4.2 Game Theory 273
 - 11.4.3 Evolutionary Game Theory 274
 - 11.4.4 Replicator Equation for Population Dynamics 274
 - 11.4.5 Evolutionarily Stable Strategies 275
 - 11.4.6 Dynamical Behavior in the Rock–Scissors–Paper Game 276
 - 11.4.7 Evolution of Cooperative Behavior 276
 - 11.4.8 Compromises between Metabolic Yield and Efficiency 278
 - Exercises 279
 - References 280
 - Further Reading 283
- 12 Models of Biochemical Systems 285**
 - 12.1 Metabolic Systems 285**
 - 12.1.1 Basic Elements of Metabolic Modeling 286
 - 12.1.2 Toy Model of Upper Glycolysis 286
 - 12.1.3 Threonine Synthesis Pathway Model 289
 - 12.2 Signaling Pathways 291**
 - 12.2.1 Function and Structure of Intra- and Intercellular Communication 292
 - 12.2.2 Receptor–Ligand Interactions 293
 - 12.2.3 Structural Components of Signaling Pathways 295
 - 12.2.4 Analysis of Dynamic and Regulatory Features of Signaling Pathways 304
 - 12.3 The Cell Cycle 307**
 - 12.3.1 Steps in the Cycle 309
 - 12.3.2 Minimal Cascade Model of a Mitotic Oscillator 310
 - 12.3.3 Models of Budding Yeast Cell Cycle 311
 - 12.4 The Aging Process 314**
 - 12.4.1 Evolution of the Aging Process 316
 - 12.4.2 Using Stochastic Simulations to Study Mitochondrial Damage 318
 - 12.4.3 Using Delay Differential Equations to Study Mitochondrial Damage 323
 - Exercises 327
 - References 327
- Part Two Reference Section 331**
- 13 Cell Biology 333**
 - 13.1 The Origin of Life 334**
 - 13.2 Molecular Biology of the Cell 336**
 - 13.2.1 Chemical Bonds and Forces Important in Biological Molecules 336
 - 13.2.2 Functional Groups in Biological Molecules 338
 - 13.2.3 Major Classes of Biological Molecules 338
 - 13.3 Structural Cell Biology 345**
 - 13.3.1 Structure and Function of Biological Membranes 347
 - 13.3.2 Nucleus 349
 - 13.3.3 Cytosol 349
 - 13.3.4 Mitochondria 350
 - 13.3.5 Endoplasmic Reticulum and Golgi Complex 350
 - 13.3.6 Other Organelles 351
 - 13.4 Expression of Genes 351**
 - 13.4.1 Transcription 351
 - 13.4.2 Processing of the mRNA 353
 - 13.4.3 Translation 353
 - 13.4.4 Protein Sorting and Posttranslational Modifications 355
 - 13.4.5 Regulation of Gene Expression 355
 - Exercises 356
 - References 356
 - Further Reading 356
- 14 Experimental Techniques 357**
 - 14.1 Restriction Enzymes and Gel Electrophoresis 358**
 - 14.2 Cloning Vectors and DNA Libraries 359**
 - 14.3 1D and 2D Protein Gels 361**
 - 14.4 Hybridization and Blotting Techniques 362**
 - 14.4.1 Southern Blotting 363
 - 14.4.2 Northern Blotting 363
 - 14.4.3 Western Blotting 363
 - 14.4.4 *In Situ* Hybridization 364
 - 14.5 Further Protein Separation Techniques 364**
 - 14.5.1 Centrifugation 364
 - 14.5.2 Column Chromatography 364
 - 14.6 Polymerase Chain Reaction 365**
 - 14.7 Next-Generation Sequencing 366**
 - 14.8 DNA and Protein Chips 367**
 - 14.8.1 DNA Chips 367
 - 14.8.2 Protein Chips 367
 - 14.9 RNA-Seq 368**
 - 14.10 Yeast Two-Hybrid System 368**
 - 14.11 Mass Spectrometry 369**
 - 14.12 Transgenic Animals 370**
 - 14.12.1 Microinjection and ES Cells 370
 - 14.12.2 Genome Editing Using ZFN, TALENs, and CRISPR 370
 - 14.13 RNA Interference 371**
 - 14.14 ChIP-on-Chip and ChIP-PET 372**
 - 14.15 Green Fluorescent Protein 374**
 - 14.16 Single-Cell Experiments 375**

- 14.17 Surface Plasmon Resonance 376**
 - Exercises 377
 - References 377
- 15 Mathematical and Physical Concepts 381**
 - 15.1 Linear Algebra 381**
 - 15.1.1 Linear Equations 381
 - 15.1.2 Matrices 384
 - 15.2 Dynamic Systems 386**
 - 15.2.1 Describing Dynamics with Ordinary Differential Equations 386
 - 15.2.2 Linearization of Autonomous Systems 388
 - 15.2.3 Solution of Linear ODE Systems 388
 - 15.2.4 Stability of Steady States 388
 - 15.2.5 Global Stability of Steady States 390
 - 15.2.6 Limit Cycles 390
 - 15.3 Statistics 391**
 - 15.3.1 Basic Concepts of Probability Theory 391
 - 15.3.2 Descriptive Statistics 396
 - 15.3.3 Testing Statistical Hypotheses 399
 - 15.3.4 Linear Models 401
 - 15.3.5 Principal Component Analysis 404
 - 15.4 Stochastic Processes 405**
 - 15.4.1 Chance in Physical Theories 405
 - 15.4.2 Mathematical Random Processes 406
 - 15.4.3 Brownian Motion as a Random Process 407
 - 15.4.4 Markov Processes 409
 - 15.4.5 Markov Chains 410
 - 15.4.6 Jump Processes in Continuous Time 410
 - 15.4.7 Continuous Random Processes 411
 - 15.4.8 Moment-Generating Functions 412
 - 15.5 Control of Linear Dynamical Systems 412**
 - 15.5.1 Linear Dynamical Systems 413
 - 15.5.2 System Response and Linear Filters 414
 - 15.5.3 Random Fluctuations and Spectral Density 415
 - 15.5.4 The Gramian Matrices 415
 - 15.5.5 Model Reduction 416
 - 15.5.6 Optimal Control 416
 - 15.6 Biological Thermodynamics 417**
 - 15.6.1 Microstate and Statistical Ensemble 417
 - 15.6.2 Boltzmann Distribution and Free Energy 418
 - 15.6.3 Entropy 419
 - 15.6.4 Equilibrium Constant and Energies 421
 - 15.6.5 Chemical Reaction Systems 422
 - 15.6.6 Nonequilibrium Reactions 424
 - 15.6.7 The Role of Thermodynamics in Systems Biology 425
 - 15.7 Multivariate Statistics 426**
 - 15.7.1 Planning and Designing Experiments for Case-Control Studies 426
 - 15.7.2 Tests for Differential Expression 427
 - 15.7.3 Multiple Testing 428
 - 15.7.4 ROC Curve Analysis 429
 - 15.7.5 Clustering Algorithms 430
 - 15.7.6 Cluster Validation 435
 - 15.7.7 Overrepresentation and Enrichment Analyses 436
 - 15.7.8 Classification Methods 438
 - Exercises 441
 - References 443
