List of Contributors *XV*
Preface *XIX*
Foreword *XXI*
Acknowledgments *XXIII*

1 Primary and Secondary Sources of Atmospheric Aerosol *1*
Claudio Tomasi and Angelo Lupi
1.1 Introduction *1*
1.2 A General Classification of Aerosol Sources *6*
1.3 Primary Aerosols of Natural Origin *7*
1.3.1 Sea-Salt Particles *8*
1.3.2 Mineral Dust *13*
1.3.3 Biogenic Aerosols *20*
1.3.4 Forest Fire Smoke *23*
1.3.5 Volcanic Dust in the Troposphere *27*
1.3.6 Cosmic Dust *30*
1.4 Secondary Aerosols of Natural Origin *31*
1.4.1 Natural Sulfate Particles from Tropospheric SO_2 and Sulfur Compounds *32*
1.4.2 Natural Nitrate Particles from Tropospheric Nitrogen Oxides *37*
1.4.3 Organic Aerosols from Biogenic Volatile Organic Compounds *41*
1.4.4 Sulfate Particles from Marine and Volcanic SO_2 Formed in the Stratosphere *42*
1.5 Primary Anthropogenic Aerosols *48*
1.5.1 Industrial Dust *50*
1.5.2 Anthropogenic Aerosols from Fossil Fuel Combustion and Carbonaceous (Soot) Particles *51*
1.5.3 Anthropogenic Aerosols from Waste and Biomass Burning *58*
1.6 Secondary Anthropogenic Aerosols *59*
1.6.1 Secondary Particles from SO_2 *60*
1.6.2 Secondary Particles from NO_x *64*
1.6.3 Secondary Organic Aerosols *68*

1.7 Concluding Remarks on the Global Annual Emission Fluxes of Natural and Anthropogenic Aerosol Mass *70*
Abbreviations *75*
List of Symbols *75*
References *76*

2 Aerosol Nucleation in the Terrestrial Atmosphere *87*
Karine Sellegri and Julien Boulon
2.1 Introduction *87*
2.2 Theoretical Basis of Nucleation and Growth of New Particles in the Atmosphere *88*
2.2.1 Introduction to Nucleation Theories Useful in Atmospheric Sciences *88*
2.2.1.1 The Unary System Model *89*
2.2.1.2 The H_2SO_4–H_2O Binary System *91*
2.2.1.3 The H_2SO_4–NH_3–H_2O Ternary System *93*
2.2.1.4 The Role of Amines *93*
2.2.1.5 The Ion-Induced Nucleation *94*
2.2.2 The Growth of New Particles *95*
2.2.2.1 The Condensation Process *95*
2.3 Observation and Detection Tools *97*
2.3.1 Detection Tools *98*
2.3.1.1 Physical Characterization *98*
2.3.1.2 Chemical Characterization *99*
2.3.2 Metrics for Characterizing New Particle Formation Events *100*
2.3.3 Occurrence of New Particle Formation Events in the Troposphere *102*
2.3.3.1 Pristine and Polluted Continental Boundary Layer *102*
2.3.3.2 Coastal and Marine Boundary Layer Sites *103*
2.3.3.3 High-Altitude Environments and Free Troposphere *103*
2.4 Precursor Candidates for Nucleation and Early Growth from Observations *104*
2.4.1 Continental Planetary Boundary Layer *104*
2.4.2 Marine Planetary Boundary Layer *104*
2.5 Parameterizations and Chamber Experiments *105*
2.6 Importance of Nucleation for the Production of Aerosols and CCN at the Global Scale *107*
2.7 Conclusions *108*
Abbreviations *109*
List of Symbols *110*
References *110*

3 Coagulation, Condensation, Dry and Wet Deposition, and Cloud Droplet Formation in the Atmospheric Aerosol Life Cycle *115*
Claudio Tomasi and Angelo Lupi
3.1 Introduction *115*

3.2 Physical Growth Processes *120*
3.2.1 Brownian Coagulation *121*
3.2.2 Growth by Condensation of Gases onto Preexisting Particles *128*
3.2.3 The Kelvin Effect *130*
3.2.4 Hygroscopic Growth of Particles by Water Vapor Condensation *133*
3.3 Aerosol Removal Processes *139*
3.3.1 Dry Deposition of Aerosol Particles *141*
3.3.2 Wet Deposition of Aerosol Particles *144*
3.3.2.1 In-Cloud Scavenging (Rainout) *145*
3.3.2.2 Interstitial Aerosol Scavenging by Cloud Droplets *147*
3.3.2.3 Precipitation Scavenging *149*
3.3.2.4 Wet Deposition in Fogs *157*
3.3.2.5 Nucleation of Ice Particles *157*
3.4 Formation of Cloud Particles *161*
3.4.1 Water Vapor Condensation *162*
3.4.2 The Köhler Theory *163*
3.4.3 The Cloud Condensation Nuclei *169*
3.5 Concluding Remarks *170*
Abbreviations *175*
List of Symbols *175*
References *180*

4 Chemical Composition of Aerosols of Different Origin *183*
Stefania Gilardoni and Sandro Fuzzi
4.1 Introduction *183*
4.2 Global Distribution and Climatology of the Main Aerosol Chemical Constituents *184*
4.2.1 Definition of Primary and Secondary Inorganic and Organic Aerosol Compounds *184*
4.2.2 Aerosol Global Budgets *186*
4.2.2.1 Organic Aerosol *186*
4.2.2.2 Black Carbon Aerosol *187*
4.2.2.3 Sulfur Aerosol *188*
4.2.2.4 Nitrogen Aerosol Species *189*
4.2.2.5 Dust Aerosol *191*
4.2.3 Main Regional Differences and Seasonal Variations of Aerosol Chemical Composition *192*
4.2.3.1 Urban Aerosol *192*
4.2.3.2 Rural Aerosol *193*
4.2.3.3 Continental Regional Background Aerosol *194*
4.2.3.4 Marine Background Aerosol *195*
4.3 Size Distributions of Aerosol Chemical Compounds *196*
4.3.1 Aerosol Size-Resolved Chemical Composition in Polluted Areas *196*

4.3.1.1 Secondary Inorganic Aerosol (Ammonium Sulfate and Nitrate) *197*
4.3.1.2 Organic Aerosol *197*
4.3.1.3 Black Carbon *198*
4.3.1.4 Dust *200*
4.3.2 Aerosol Size-Resolved Chemical Composition in Unperturbed Environments *200*
4.3.2.1 Rain Forest *200*
4.3.2.2 High Altitude Mountain Regions *200*
4.3.2.3 Polar Regions *202*
4.3.3 Long-Term Changes of Aerosol Chemical Components *203*
4.4 Issues Related to Aerosol Chemical Composition *205*
4.4.1 Characterization of the Aerosol Carbonaceous Fraction *205*
4.4.1.1 Soot: BC or EC *205*
4.4.1.2 Organic Aerosol *207*
4.4.2 Sources of BC and OA *209*
4.4.2.1 Black Carbon *209*
4.4.2.2 Organic Aerosol *211*
4.4.3 Effect of Organic and Inorganic Chemical Composition on Aerosol Activity as Cloud Condensation Nuclei and Ice Nuclei *213*
4.4.3.1 Cloud Condensation Nuclei *213*
4.4.3.2 Ice Nuclei *214*
Abbreviations *216*
List of Symbols *217*
References *218*

5 Aerosol Optics *223*
Alexander A. Kokhanovsky
5.1 Introduction *223*
5.2 Absorption *224*
5.3 Scattering *229*
5.4 Polarization *234*
5.5 Extinction *237*
5.6 Radiative Transfer *239*
5.7 Image Transfer *242*
Abbreviations *244*
List of Symbols *244*
References *245*

6 Aerosol Models *247*
Claudio Tomasi, Mauro Mazzola, Christian Lanconelli, and Angelo Lupi
6.1 Introduction *247*
6.2 Modeling of the Optical and Microphysical Characteristics of Atmospheric Aerosol *249*
6.2.1 The 6S Code Aerosol Extinction Models *254*

6.2.1.1 The Four 6S Basic Aerosol Components *254*
6.2.1.2 The Three 6S Aerosol Models *258*
6.2.2 The 6S Additional Aerosol Models *262*
6.2.3 The 6S Modified (M-Type) Aerosol Models *271*
6.2.4 The OPAC Aerosol Models *277*
6.2.5 The Aerosol Models of Shettle and Fenn (1979) *288*
6.2.6 The Seven Additional Aerosol Models of Tomasi *et al.* (2013) *295*
6.2.7 The Polar Aerosol Models *304*
6.3 General Remarks on the Aerosol Particle Number, Surface, and Volume Size-Distribution Functions *306*
6.3.1 The Aerosol Particle Number Size-Distribution Function *310*
6.3.2 The Aerosol Surface, Volume, and Mass Size Distributions *314*
6.4 Size-Distribution Characteristics of Various Aerosol Types *317*
6.4.1 Remote Continental Aerosols *317*
6.4.2 Free Tropospheric Aerosols *319*
6.4.3 Rural-Continental Aerosols *319*
6.4.4 Continental-Polluted Aerosols *322*
6.4.5 Maritime Clean Aerosols *322*
6.4.6 Maritime-Polluted Aerosols *324*
6.4.7 Desert Dust *324*
6.4.8 Biomass Burning Aerosols *326*
6.4.9 Urban Aerosols *326*
6.4.10 Polar Arctic Aerosols *328*
6.4.11 Polar Antarctic Aerosols *329*
6.4.12 Stratospheric Volcanic Aerosols *331*
6.5 Concluding Remarks *332*
Abbreviations *333*
List of Symbols *334*
References *337*

7 Remote Sensing of Atmospheric Aerosol *341*
Alexander A. Kokhanovsky, Claudio Tomasi, Boyan H. Petkov, Christian Lanconelli, Maurizio Busetto, Mauro Mazzola, Angelo Lupi, and Kwon H. Lee
7.1 Introduction *341*
7.2 Ground-Based Aerosol Remote Sensing Measurements *342*
7.2.1 The Multispectral Sun-Photometry Method *345*
7.2.1.1 Calibration of a Sun Photometer Using the Langley Plot Method *346*
7.2.1.2 Determination of Aerosol Optical Thickness *348*
7.2.1.3 Determination of Aerosol Optical Parameters from Sun-Photometer Measurements *360*
7.2.1.4 Relationship between the Fine Particle Fraction and Ångström Wavelength Exponent *370*

7.2.2 Measurements of Volume Extinction, Scattering, and Absorption Coefficients at Ground Level Using Nephelometer and PSAP Techniques *373*
7.2.3 Vertical Profiles of Backscatter and Extinction Coefficients from LIDAR Measurements *375*
7.2.4 Measurements of the Aerosol Size Distribution Using an Optical Particle Counter *378*
7.3 Airborne Remote Sensing Measurements of Aerosol Optical Properties *380*
7.3.1 Main Results Derived from the Second Airborne Arctic Stratospheric Expedition (AASE-II) Measurements *385*
7.3.2 Airborne Remote Sensing Measurements during the Army LIDAR Verification Experiment (ALIVE) *386*
7.3.3 Airborne Measurements Performed during the Sulfate Clouds and Radiation–Atlantic (SCAR-A) Experiment *386*
7.3.4 Airborne Measurements Conducted during the Tropospheric Aerosol Radiative Forcing Observational Experiment (TARFOX) *387*
7.3.5 The Aerosol Characterization Experiment 2 (ACE-2) Airborne Remote Sensing Measurements *388*
7.3.6 Airborne Remote Sensing Measurements during the Puerto Rico Dust Experiment (PRIDE) *391*
7.3.7 The ARCTAS/ARCPAC Airborne Remote Sensing Measurements in the Western Arctic *392*
7.3.8 The Airborne Measurements Conducted during the Pan-Arctic Measurements and Arctic Regional Climate Model Intercomparison Project (PAM-ARCMIP) *399*
7.4 Satellite-Borne Aerosol Remote Sensing Measurements *403*
7.4.1 Satellite Instrumentation *403*
7.4.2 Methods *411*
7.4.2.1 The Algorithms Based on the Single-View Spectral Observations *411*
7.4.2.2 Double-View Spectral Observations *412*
7.4.2.3 Multiview Spectral Observations *413*
7.4.2.4 Multiview Spectral and Polarimetric Observations *413*
7.4.2.5 Retrievals over Ocean Using Multiangle Polarimetric Observations *414*
7.4.2.6 Retrievals over Land *414*
7.4.2.7 Aerosol Retrieval Using an Artificial Neural Network Technique *414*
7.4.3 Examples of Aerosol Retrievals *415*
7.4.3.1 Global View of Aerosol Distribution from Passive Sensor *415*
7.4.3.2 Aerosol Retrieval from Different Sensors and Retrieval Algorithms *416*
7.4.3.3 Time-Resolved Observation from Geostationary Platform *419*

7.4.3.4 Atmospheric Anatomy from the Active Sensing Platform *421*
Abbreviations *422*
List of Symbols *423*
References *427*

8 Aerosol and Climate Change: Direct and Indirect Aerosol Effects on Climate *437*
Claudio Tomasi, Christian Lanconelli, Mauro Mazzola, and Angelo Lupi
8.1 Introduction *437*
8.2 The Instantaneous DARF Effects at the ToA and BoA Levels and in the Atmosphere *439*
8.2.1 The Spectral Characteristics of Solar Radiation *439*
8.2.2 Vertical Features of Aerosol Volume Extinction Coefficient *443*
8.2.3 Aerosol Extinction Models and Optical Characteristics *444*
8.2.4 Modeling the Underlying Surface Reflectance Characteristics *447*
8.2.5 Calculations of Instantaneous DARF Terms at the ToA and BoA Levels and within the Atmosphere *459*
8.2.6 Dependence Features of Instantaneous DARF Terms on Aerosol Optical Parameters and Surface Reflectance *463*
8.2.6.1 Dependence of Instantaneous DARF on Aerosol Optical Thickness *464*
8.2.6.2 Dependence of Instantaneous DARF on Aerosol Single Scattering Albedo *467*
8.2.6.3 Dependence of Instantaneous DARF on Underlying Surface Albedo *471*
8.2.6.4 Dependence of Instantaneous DARF on Solar Zenith Angle *474*
8.3 The Diurnally Average DARF Induced by Various Aerosol Types over Ocean and Land Surfaces *476*
8.3.1 Description of the Calculation Method Based on the Field Measurements of Aerosol Optical Parameters *478*
8.3.2 Calculations of the Diurnally Average DARF Terms and Efficiency Parameters for Eleven Aerosol Types *498*
8.3.2.1 Remote Continental Aerosols *498*
8.3.2.2 Rural-Continental Aerosols *500*
8.3.2.3 Free Tropospheric Aerosols *502*
8.3.2.4 Continental-Polluted Aerosols *504*
8.3.2.5 Maritime Clean Aerosols *506*
8.3.2.6 Maritime–Continental Aerosols *508*
8.3.2.7 Desert Dust *512*
8.3.2.8 Biomass Burning Aerosols *516*
8.3.2.9 Urban and Industrial Aerosols *519*
8.3.2.10 Polar Aerosols *522*
8.3.2.11 Stratospheric Volcanic Aerosols *525*
8.4 Variations of DARF Efficiency as a Function of Aerosol Single Scattering Albedo *525*

8.5 Concluding Remarks on the DARF Effects over the Global Scale *529*
8.6 On the Indirect Aerosol Effects Acting in the Earth's Climate System *531*
Abbreviations *537*
List of Symbols *538*
References *541*

9 Aerosol and Air Quality *553*
Sandro Fuzzi, Stefania Gilardoni, Alexander A. Kokhanovsky, Walter Di Nicolantonio, Sonoyo Mukai, Itaru Sano, Makiko Nakata, Claudio Tomasi, and Christian Lanconelli
9.1 Introduction *553*
9.1.1 Aerosol Air Pollution *553*
9.1.2 Aerosol Sources and Size Distribution in Relation to Human Health Effects *553*
9.1.3 Aerosol Chemical Composition and Health Effects *555*
9.1.4 Atmospheric Aerosols, Air Pollution, and Climate Change *557*
9.1.5 Aerosol Load in Different Areas of the World *558*
9.2 Aerosol Load as Derived from Satellite-Based Measurements *560*
9.2.1 VIS/NIR/SWIR Multispectral Satellite Observations for Evaluating PM Concentrations: An Example over the Northern Italy Area *560*
9.2.1.1 MODIS-Based PM Concentration Estimates at the Surface *561*
9.2.1.2 Data Set and Results *563*
9.2.1.3 Satellite PM Multiannual Monitoring: Looking for Compliance to European Air Quality Directive *566*
9.2.2 PM Estimations over Osaka (Japan) Based on Satellite Observations *569*
9.2.2.1 Introduction *569*
9.2.2.2 Aerosol Remote Sensing *571*
9.2.2.3 Estimation of PM from Satellite-Based AOT *574*
9.3 Characterization of Mass Concentration and Optical Properties of Desert Dust in Different Areas of the Earth *577*
9.3.1 Dust Storms in the Southwestern United States *578*
9.3.2 Saharan Dust Transport over the Southeastern United States and the Caribbean Region *579*
9.3.3 Saharan Dust Transport over the Tropical Atlantic Ocean and the Western Coast of Africa *580*
9.3.4 Saharan Dust Transport Toward Southern Europe *581*
9.3.5 Saharan Dust Transport Toward the Middle Eastern and the Persian Gulf *584*
9.3.6 Asian Dust Transport Over Central Asia and China *584*
9.3.7 Asian Dust Transport Over Korea and Japan *588*
9.3.8 Desert Dust Transport Over Oceanic Areas *589*

Abbreviations *589*
List of Symbols *590*
References *591*

10 Impact of the Airborne Particulate Matter on the Human Health *597*
Marina Camatini, Maurizio Gualtieri, and Giulio Sancini
10.1 Introduction *597*
10.2 Epidemiological Evidences *600*
10.2.1 Exacerbation of Lung Diseases *602*
10.2.2 Effects on the Cardiovascular System *603*
10.2.3 Life Expectancy and PM Concentration *606*
10.3 Toxicological Evidences *609*
10.3.1 Particle Dosimetry, Particle Deposition, and Real Exposure *609*
10.3.2 *In Vivo* Evidences *612*
10.3.2.1 Lung Inflammation *613*
10.3.2.2 Cardiovascular Damages *615*
10.3.2.3 Brain and Other Target Organs *618*
10.3.3 *In Vitro* Evidences *622*
10.3.3.1 Inflammatory Response *622*
10.3.3.2 Oxidative Stress *624*
10.3.3.3 DNA Damage *626*
10.3.3.4 Cell Death *627*
10.4 Mechanism of Effects *630*
10.4.1 The Inflammatory Paradigm *630*
10.4.2 The Reactive Oxygen Species *632*
10.4.3 Translocation of Particles: If Yes Then Where *634*
10.4.4 Dimension versus Composition: Two Heads of the "PM Hydra" *636*
10.5 Conclusions *637*
Abbreviations *638*
List of Symbols *639*
References *639*

11 Aerosol Impact on Cultural Heritage: Deterioration Processes and Strategies for Preventive Conservation *645*
Alessandra Bonazza, Paola De Nuntiis, Paolo Mandrioli, and Cristina Sabbioni
11.1 Introduction *645*
11.2 Monitoring for Cultural Heritage Conservation *645*
11.3 Damage and Black Crusts Formation on Building Materials *652*
11.3.1 Damage to Carbonate Stone *653*
11.3.2 Damage to Silicate Stone *655*
11.3.3 Anthropogenic Aerosol in Crusts *656*
11.3.4 Organic and Elemental Carbon *657*
11.3.5 Damage to Coastal Areas *658*
11.4 Bioaerosol Effects on Cultural Heritage *659*

11.5 Guidelines for the Preventive Conservation of Cultural Heritage in Urban Areas *664*
Abbreviations *665*
List of Symbols *665*
References *666*

Index *671*
