List of Contributors *XVII*

Preface *XXV*

Part A Molecular Biology, Enzyme Screening and Bioinformatics *1*

- 1 Engineering Lipases with an Expanded Genetic Code** *3*
Alessandro De Simone, Michael Georg Hoegl, and Nediljko Budisa
- 1.1 Introduction *3*
- 1.2 Enzyme Activity of Lipases from Different Sources and Engineering Approaches *4*
- 1.3 Noncanonical Amino Acids in Lipase Design and Engineering *5*
- 1.4 Case Study: Manipulating Proline, Phenylalanine, and Methionine Residues in Lipase *7*
- 1.5 “Unnatural” Lipases Are Able to Catalyze Reactions under Different Hostile Environments *8*
- 1.6 Lipase Engineering via Bioorthogonal Chemistries: Activity and Immobilization *9*
- 1.7 Conclusions and Perspectives *10*
 References *11*
- 2 Screening of Enzymes: Novel Screening Technologies to Exploit Noncultivated Microbes for Biotechnology** *13*
Jennifer Chow and Wolfgang R. Streit
- 2.1 Introduction *13*
- 2.2 Sequence- versus Function-Based Metagenomic Approach to Find Novel Biocatalysts *14*
- 2.2.1 Functional Metagenomics – from Single Clones to High-Throughput Screening *16*
- 2.2.2 Screening for Different Classes of Enzymes *16*
- 2.2.2.1 EC 1: Oxidoreductases *17*
- 2.2.2.2 EC 2: Transferases *18*
- 2.2.2.3 EC3: Hydrolases *19*
- 2.3 Alternative Hosts, Metatranscriptomics, and Metaproteomics *25*

2.4	Future Perspectives	26
	References	27
3	Robust Biocatalysts – Routes to New Diversity	31
	<i>Anna Krüger, Skander Elleuche, Kerstin Sahn, and Garabed Antranikian</i>	
3.1	Introduction	31
3.2	Metagenomics to Retrieve New Genes from Extremophilic Microorganisms	32
3.3	Microbial Expression Hosts for the Production of Extremozymes	36
3.4	Molecular Biology Approaches for Enzyme Improvement	39
3.4.1	Gene Fusions in Molecular Biology	40
3.4.2	Synergism of Fusion Enzymes for Lignocellulose Biomass Degradation	44
3.5	Conclusions and Future Perspectives	45
	References	46
4	Application of High-Throughput Screening in Biocatalysis	53
	<i>Xin Ju, Jie Zhang, Kui Chan, Xiaoliang Liang, Junhua Tao, and Jian-He Xu</i>	
4.1	Introduction	53
4.2	Discussions	54
4.2.1	Screening of Ketoreductases (KREDs)	54
4.2.2	Screening of Nitrilases	56
4.2.3	Screening of Oxygenases	58
4.2.4	Screening of Alcohol Oxidases	59
4.2.5	Screening of Epoxide Hydrolases	60
4.2.6	Screening of Lipases and Esterases	60
4.2.7	Screening Transaminases	63
4.2.8	Screening of Aldolases	64
4.2.9	Screening of Hydroxynitrile Lyases (Oxynitrilases)	64
4.2.10	Screening of Glycoside Hydrolases	66
4.2.11	Screening Glycosyltransferases	66
4.3	Summary	68
	References	68
5	Supporting Biocatalysis Research with Structural Bioinformatics	71
	<i>Nadine Schneider, Andrea Volkamer, Eva Nittinger, and Matthias Rarey</i>	
5.1	Introduction	71
5.2	Computational Tools to Assist Biocatalysis Research	71
5.2.1	Computational Tools for Protein Engineering	72
5.2.2	Computational Tools for Function Prediction and Analysis of Enzymes	73
5.3	From Active Site Analysis to Protein Stability Considerations	75
5.3.1	Computer-Aided Active Site Analysis of Protein Structures	76
5.3.1.1	DoGSite: Binding Site Detection and Derivation of Representative Binding Site Descriptors	77

5.3.1.2	DoGSiteScorer: Descriptor-Based Protein Classification	78
5.3.2	Molecular Docking to Assist Functional Characterization of New Enzymes	80
5.3.3	Energetic Estimation of Protein-Ligand and Protein-Protein Interactions	81
5.3.3.1	The Concept behind the HYDE Scoring Function	82
5.3.3.2	HYDE – Estimation of Hydrogen Bonding and Dehydration Energy	83
5.3.3.3	Estimation of Protein-Protein Interactions Using HYDE	84
5.4	Applying DoGSiteScorer and HYDE to Biocatalytical Questions	85
5.4.1	Enzymatic Function Prediction Using the DoGSiteScorer	86
5.4.2	Docking-Based Functional Protein Classification	87
5.4.3	Predicting Potential Mutation Sites Using DoGSite and Molecular Modeling	88
5.4.4	Predicting the Potential of a Target to be Modulated by Low-Molecular-Weight Compounds	90
5.4.5	Prediction of Competitive Substrate Inhibition	91
5.4.6	Classification of Biological and Artificial Protein Complexes	93
5.4.7	Available Web Services to Support Biocatalysis Research	94
5.5	Conclusion and Future Directions	95
	Acknowledgments	96

8.6	Emerging Biocatalytic Phosphorylation Reactions	157
8.7	Reaction Engineering for Biocatalytic Phosphorylation Processes	160
8.7.1	Reaction System Optimization	160
8.7.2	Reaction Kinetics of Biocatalytic Phosphorylation	164
8.7.3	Process Optimization	165
8.8	Summary and Outlook	167
	References	168
9	Flavonoid Biotechnology – New Ways to High-Added-Value Compounds	179
	<i>Ioannis V. Pavlidis, Mechthild Gall, Torsten Geißler, Egon Gross, and Uwe T. Bornscheuer</i>	
9.1	Flavonoids	179
9.1.1	Flavonoids Chemistry	179
9.1.2	Bioactivity of Flavonoids	179
9.1.2.1	Role of Flavonoids in Plants	179
9.1.2.2	Nutritional and Health Benefits for Human	181
9.2	Metabolic Pathways of Flavonoids	182

- 9.2.1 Biosynthesis of Flavonoids in Plants 182
- 9.2.2 Degradation Pathways 183
- 9.3 Biotechnological Processes for the Production of High-Added-Value Flavonoids 186
 - 9.3.1 Host Systems for the Production of Flavonoids 187
 - 9.3.2 Reconstitution of Biosynthetic Pathways for the Production of Natural Occurring Flavonoids 187
 - 9.3.3 Production of High-Added-Value Flavonoids or Novel (Nonnaturally Occurring) Flavonoids 189
- 9.4 Future Prospects 191
 - Acknowledgments 192
 - References 192

- 10 Transaminases – A Biosynthetic Route for Chiral Amines 199**
Henrike Brundiek and Matthias Höhne
 - 10.1 Introduction 199
 - 10.2 Biocatalysts as Attractive Alternatives to Access Enantiopure Chiral Amines 199
 - 10.3 Transaminases as a Biosynthetic Route for Chiral Amines 201
 - 10.4 Amine Transaminases (ATAs) for the Production of Chiral Amines 203
 - 10.4.1 Transaminase Mechanism 203
 - 10.4.2 (R)- and (S)-Selective ATAs 204
 - 10.5 Kinetic Resolution and Asymmetric Reductive Amination Using ATAs 207
 - 10.5.1 Kinetic Resolution of Amines Employing ATAs 207
 - 10.5.2 Asymmetric Synthesis of Amines Using ATAs 208
 - 10.5.3 Recent Advances in Industrially Relevant Asymmetric Reductive Amination Reactions 211
 - 10.5.4 ATA Screening Kit 212
 - 10.6 Outlook 213
 - Acknowledgment 214
 - References 214

- 11 Biocatalytic Processes for the Synthesis of Chiral Alcohols 219**
Gao-Wei Zheng, Yan Ni, and Jian-He Xu
 - 11.1 Introduction 219
 - 11.2 Statin Side Chain 220
 - 11.2.1 Reductase and Dehalogenase 220
 - 11.2.2 Nitrilase 223
 - 11.2.3 Aldolase 223
 - 11.2.4 Lipase 224
 - 11.3 *o*-Chloromandelic Acid and Its Derivatives 226
 - 11.3.1 Hydroxynitrile Lyase 226
 - 11.3.2 Nitrilase 227
 - 11.3.3 Ketoreductase 228

11.4	Ethyl 2-Hydroxy-4-phenylbutyrate	229
11.4.1	Lipase	229
11.4.2	Reductase	229
11.5	Ethyl 4-Chloro-3-hydroxybutanoate	230
11.5.1	Ketoreductase	231
11.5.2	Halohydrin Dehalogenase	232
11.6	3-Quinuclidinol	232
11.6.1	Protease	232
11.6.2	Ketoreductase	233
11.7	3-Hydroxy-3-phenylpropanenitrile	235
11.7.1	Lipase	235
11.7.2	Nitrilase	236
11.7.3	Ketoreductase	236
11.8	Menthol	237
11.9	Halogen-Substituted 1-Phenylethanol	240
11.9.1	1-(4'-Fluorophenyl)ethanol	240
11.9.2	2,2,2-Trifluoro-1-phenylethanol	240
11.9.3	1-[3',5'-Bis-(Trifluoromethyl)phenyl]ethanol	241
11.9.4	2-Chloro-1-phenylethanol	242
11.9.5	1-(4'-Chlorophenyl)ethanol	243
11.10	Summary and Outlook	243
	References	244

Part C Reaction and Process Engineering 251

12	Inorganic Adsorbents in Enzymatic Processes	253
	<i>Ulrich Sohling, Kirstin Suck, Patrick Jonczyk, Friederike Sander, Sascha Beutel, Thomas Scheper, Axel Thiefes, Ute Schuldt, Claudia Aldenhoven, Gabriella Egri, Lars Dähne, Annamaria Fiethen, Hubert Kuhn, Oliver Wenzel, Heike Temme, Bernd Niemeyer, Paul Bubenheim, and Andreas Liese</i>	
12.1	Introduction	253
12.1.1	Inorganic Adsorbents	254
12.1.1.1	Kerolite Clays	254
12.1.1.2	Synthetic Zeolites	254
12.1.1.3	Aluminum Oxide/Oxide Hydrate and Amorphous Aluminosilicate	257
12.1.1.4	Precipitated silica	258
12.2	Porous Inorganic Adsorbents for Enzyme Purification Processes (Alumina, Aluminosilicates, Precipitated Silica)	259
12.2.1	Introduction	259
12.2.2	Static Adsorption Experiments	260
12.2.3	Dynamic Adsorption Systems	261
12.2.4	Lipase and Esterase Purification from Culture Supernatants	262
12.2.5	Conclusion	265

- 12.3 Immobilization of Phospholipase A1 and A2 for the Degumming of Edible Oils 265
- 12.4 Immobilization of *Alcohol Dehydrogenase 'A'* and *Candida antarctica* Lipase B on Precipitated Silica by Layer-by-Layer-Technology 270
- 12.5 Molecular Modeling Calculations of the ADH-'A' Immobilization onto Polyelectrolyte Surfaces 273
 - 12.5.1 The Polyethylenimine Layer on the Substrate Surface 273
 - 12.5.2 Modeling of the Physisorption of the ADH-'A' 274
 - 12.5.3 Prediction of the Orientations of the ADH in the Covalently Coupled Form 277
 - 12.5.4 Conclusions 277
- 12.6 Application of Clays and Zeolites for Adsorption of Educts and Products of Reactions with Alcohol Dehydrogenase in Aqueous Reaction Media 278
- 12.7 Product Separation from Complex Mixtures of Biocatalytic Transformations 283
 - 12.7.1 Separation of Diols from Ketone–Alcohol Mixtures 283
- 12.8 Continuous Production and Discontinuous Selective Adsorption of Short-Chain Alcohols in a Fixed-Bed Reactor with Alumina Oxides 287
- 12.9 Summary and Outlook 290
 - Acknowledgment 291
 - References 291
- 13 Industrial Application of Membrane Chromatography for the Purification of Enzymes 297**
Sascha Beutel, Louis Villain, and Thomas Scheper
 - 13.1 Introduction 297
 - 13.2 Membrane Adsorber 298
 - 13.2.1 Used Membrane Platform 298
 - 13.2.2 Used Functional Groups 299
 - 13.2.3 Membrane Adsorber Module Design for Bind&Elute Application 299
 - 13.3 Case Studies and Used Model Enzymes 301
 - 13.4 Experimental 302
 - 13.4.1 Chemicals 302
 - 13.4.2 Membrane Adsorber Modules 302
 - 13.5 Case Study 1: Purification of Penicillin G Amidase 302
 - 13.6 Case Study 2: Purification of Cellulase Cel5A 307
 - 13.7 Case Study 3: Purification of Lipase aGTL 310
 - 13.8 Conclusion and Outlook 313
 - Acknowledgment 313
 - References 314

- 14 Fermentation of Lactic Acid Bacteria: State of the Art and New Perspectives 317**
Ralf Pörtner, Rebecca Faschian, and Detlef Goelling
- 14.1 Introduction 317
- 14.1.1 Taxonomy and Metabolism 317
- 14.1.2 Applications of LAB 319
- 14.1.2.1 LAB in Dairy Industry 319
- 14.1.2.2 LAB Used for the Production of Lactic Acid 320
- 14.1.2.3 LAB Used for the Production of 3-HPA 321
- 14.2 Factors Effecting Growth and Productivity of Lactic Acid Bacteria 322
- 14.3 Fermentation Techniques for Growth and Production 323
- 14.4 Case Study: Fixed-Bed Reactor with Immobilized Cells 328
- 14.4.1 Fixed-Bed Reactor System – Principle 328
- 14.4.2 Examples for Fixed-Bed Cultivation 330
- 14.5 Conclusions 335
- Acknowledgment 336
- References 337
-
- 15 The Bubble Column Reactor: A Novel Reactor Type for Cosmetic Esters 343**
Sören Baum, Jakob J. Mueller, Lutz Hilterhaus, Marrit Eckstein, Oliver Thum, and Andreas Liese
- 15.1 Introduction 343
- 15.2 Bubble Column Reactor in Comparison to Other Reactor Types 346
- 15.2.1 Bubble Column Reactor 346
- 15.2.2 Other Reactor Types for the Synthesis of Cosmetic Esters 348
- 15.3 Case Study: Enzymatic Production of Cosmetic Esters 349
- 15.3.1 Synthesis of High-Viscous Polyglycerol-3 Laurate 349
- 15.3.2 Synthesis of Low-Viscous Myristyl Myristate 351
- 15.3.3 Synthesis of High-Viscous α -Methyl Glycoside Laurate 355
- 15.4 *In situ* Online Measurements in a Bubble Column Reactor by Means of Fourier Transformed Mid-Infrared Spectroscopy 357
- 15.4.1 Online Monitoring of Fatty Acid Conversion and Water Concentration 358
- 15.4.2 Online Monitoring of Mono-, Di-, and Triglycerides Composition 362
- 15.5 Summary and Outlook 364
- References 365
-
- 16 Pharmaceutical Intermediates by Biocatalysis: From Fundamental Science to Industrial Applications 367**
Ramesh N. Patel
- 16.1 Introduction 367

- 16.2 Boceprevir: Oxidation of 6,6-Dimethyl-3-azabicyclo[3.1.0]hexane by Monoamine Oxidase 367
- 16.3 Pregabalin: Enzymatic Preparation of (*S*)-3-Cyano-5-methylhexanoic Acid Ethyl Ester 369
- 16.4 Glucagon-Like Peptide-1 (GLP-1): Enzymatic Synthesis of (*S*)-Amino-3-[3-{6-(2-methylphenyl)} pyridyl]-propionic Acid 371
- 16.5 Rhinovirus Protease Inhibitor: Enzymatic Preparation of (*R*)-3-(4-Fluorophenyl)-2-hydroxy Propionic Acid 373
- 16.6 Saxagliptin: Enzymatic Synthesis of (*S*)-*N*-*boc*-3-Hydroxyadamantylglycine 374
- 16.7 Sitagliptin: Enzymatic Synthesis of Chiral Amine 375
- 16.8 Montelukast: Enzymatic Reduction for the Synthesis of Leukotriene D (LTD) 4 Antagonists 377
- 16.9 Clopidogrel: Enzymatic Preparation of (*S*)-2-Chloromandelic Acid Esters 378
- 16.10 Calcitonin Gene-Related Peptide Receptors Antagonist: Enzymatic Preparation of (*R*)-2-Amino-3-(7-methyl-1 H-indazol-5-yl)propanoic Acid 379
- 16.11 Chemokine Receptor Modulators: Enzymatic Desymmetrization of Dimethyl Ester 381
- 16.12 Regioselective Enzymatic Acylation of Ribavirin 383
- 16.13 Atorvastatin: Enzymatic Preparation of (*R*)-4-Cyano-3-hydroxybutyrate 384
- 16.14 Atazanavir, Telaprevir, Boceprevir: Enzymatic Synthesis of (*S*)-Tertiary-leucine 385
- 16.15 Relenza (Zanamivir): Enzymatic Synthesis of *N*-Acetylneuraminic Acid 387
- 16.16 Atorvastatin, Rosuvastatin: Aldolase-Catalyzed Synthesis of Chiral Lactol Intermediates 389
- 16.17 Anticancer Drugs: Epothilone B and Microbial Hydroxylation of Epothilone B 390
- 16.18 Corticotropin-Releasing Factor-1 (CRF-1) Receptor Antagonist: Enzymatic Synthesis of (*S*)-1-Cyclopropyl-2-methoxyethanamine 392
- 16.19 Conclusion 393
Acknowledgment 394
References 395
- 17 Biocatalysis toward New Biobased Building Blocks for Polymeric Materials 405**
Katrien Bernaerts, Luuk Mestrom, and Stefaan De Wildeman
- 17.1 Introduction 405
- 17.2 Questions and Answers that Lead Us toward Sustainability in Plastic Materials 406

17.2.1	How Dominant Are the Fossil “Evergreen” Building Blocks Used Today in the Bioeconomy of the Future? 406
17.2.2	How Matching (to Their Applications) Are the Plastics We Use Today? 408
17.2.3	How Do We Measure Ecological Impact of Biobased Materials Derived from Chemicals? 408
17.2.4	How Global Can a Bioeconomy Be? 409
17.2.5	How Commodity Level Can a Novel Plastic Be Introduced in the Market? 410
17.2.6	How Are Biobased Products Perceived? 410
17.2.7	“Biobased Building Blocks Have a Large Potential.” Which Biobased Building Blocks Have a Large Potential? 411
17.2.8	New Resources – New Laws 412
17.3	Criteria and Qualifiers for New Biobased Building Blocks for Plastics Applications 413
17.4	Criteria and Qualifiers for Launching New Biobased Building Blocks for Plastics Applications in New Value Chains 414
17.5	Position of Biobased Building Blocks Innovation in the Plastics Pyramid 414
17.6	Biocatalysis Conversions and Challenges toward newBBBB 415
17.6.1	EC 1: Oxidoreductases 416
17.6.1.1	Reported and/or Established Biocatalyzed Redox Reactions toward newBBBB 417
17.6.1.2	Challenging but Potentially Desired Biocatalytic Redox Reactions toward newBBBB 418
17.6.2	EC 2: Transferases 420
17.6.3	EC 3: Hydrolases 420
17.6.4	EC 4: Lyases 421
17.6.4.1	Hydratases: Broader Substrate Spectrum on Unactivated Double Bonds 422
17.6.4.2	Cyclases 422
17.7	Biocatalytic Cascade Reactions to Functional Building Blocks for Materials 423
17.7.1	Example 1: Complete Biocatalytic Conversion from Amino Acid Waste 423
17.7.2	Example 2: Enzymatic Resolution as a Tool to Upgrade the Material Properties 423
17.7.2.1	Example 3: Exploiting Regioselective Control for New BBBBs 423
17.8	Conclusion 424
