Preface *XVII*

1	General Introduction	1
1.1	Suspensions	1
1.2	Latexes	2
1.3	Emulsions	2
1.4	Suspoemulsions	3
1.5	Multiple Emulsions	3
1.6	Nanosuspensions	4
1.7	Nanoemulsions	4
1.8	Microemulsions	5
1.9	Pigment and Ink Dispersions	5
1.10	Foams	5
	References	9
2	Surfactants Used in Formulation of Dispersions	11
2.1	General Classification of Surface-Active Agents	12
2.1.1	Anionic Surfactants	13
2.1.1.1	Carboxylates	13
2.1.1.2	Sulphates	14
2.1.1.3	Sulphonates	15
2.1.1.4	Phosphate-Containing Anionic Surfactants	16
2.1.2	Cationic Surfactants	16
2.1.3	Amphoteric (Zwitterionic) Surfactants	17
2.1.4	Nonionic Surfactants	18
2.1.4.1	Alcohol Ethoxylates	19
2.1.4.2	Alkyl Phenol Ethoxylates	19
2.1.4.3	Fatty Acid Ethoxylates	20
2.1.4.4	Sorbitan Esters and Their Ethoxylated Derivatives (Spans and Tweens)	20
2.1.4.5	Ethoxylated Fats and Oils	21
2.1.4.6	Amine Ethoxylates	21
2.1.4.7	Amine Oxides	21

2.1.5	Specialty Surfactants	22
2.1.5.1	Fluorocarbon and Silicone Surfactants	22
2.1.5.2	Gemini Surfactants	23
2.1.5.3	Surfactants Derived from Monosaccharides and Polysaccharides	23
	References	24
3	Physical Chemistry of Surfactant Solutions and the Process of Micellisation	27
3.1	Thermodynamics of Micellisation	33
3.1.1	Kinetic Aspects	34
3.1.2	Equilibrium Aspects: Thermodynamics of Micellisation	35
3.2	Enthalpy and Entropy of Micellisation	37
3.2.1	Driving Force for Micelle Formation	38
3.2.2	Micellisation in Surfactant Mixtures (Mixed Micelles)	40
	References	43
4	Dispersants and Polymeric Surfactants	45
4.1	Solution Properties of Polymeric Surfactants	46
4.2	General Classification of Polymeric Surfactants	50
4.3	Polyelectrolytes	53
	References	54
5	Adsorption of Surfactants at the Air/Liquid, Liquid/Liquid, and Solid/Liquid Interfaces	55
5.1	Introduction	55
5.2	Adsorption of Surfactants at the Air/Liquid (A/L) and Liquid/Liquid (L/L) Interfaces	56
5.3	The Gibbs Adsorption Isotherm	57
5.4	Equation of State Approach	60
5.5	The Langmuir, Szyszkowski, and Frumkin Equations	62
5.6	Interfacial Tension Measurements	63
5.6.1	The Wilhelmy Plate Method	63
5.6.2	The Pendant Drop Method	64
5.6.3	The Du Nouy's Ring Method	64
5.6.4	The Drop Volume (Weight) Method	65
5.6.5	The Spinning Drop Method	65
5.7	Adsorption of Surfactants at the Solid/Liquid (S/L) Interface	66
5.7.1	Adsorption of Ionic Surfactants on Hydrophobic Surfaces	68
5.7.2	Adsorption of Ionic Surfactants on Polar Surfaces	71
5.7.3	Adsorption of Nonionic Surfactants	72
	References	74
6	Adsorption of Polymeric Surfactants at the Solid/Liquid Interface	77
6.1	Theories of Polymer Adsorption	80

6.2	Experimental Techniques for Studying Polymeric Surfactant Adsorption	88
6.2.1	Measurement of the Adsorption Isotherm	88
6.2.2	Measurement of the Fraction of Segments, p	89
6.3	Determination of Segment Density Distribution $\rho(z)$ and Adsorbed Layer Thickness δ_h	89
6.4	Examples of the Adsorption Isotherms of Nonionic Polymeric Surfactants	92
6.4.1	Adsorbed Layer Thickness Results	96
6.4.2	Kinetics of Polymer Adsorption	98
	References	98
7	Colloid Stability of Disperse Systems Containing Electrical Double Layers	101
7.1	Origin of Charge on Surfaces	101
7.1.1	Surface Ions	101
7.1.2	Isomorphic Substitution	102
7.2	Structure of the Electrical Double Layer	103
7.2.1	Diffuse Double layer (Gouy and Chapman)	103
7.3	Stern–Grahame Model of the Double Layer	104
7.4	Distinction between Specific and Nonspecific Adsorbed Ions	104
7.5	Electrical Double Layer Repulsion	105
7.6	van der Waals Attraction	106
7.7	Total Energy of Interaction	109
7.7.1	Deryaguin–Landau–Verwey–Overbeek (DLVO) Theory	109
7.8	Flocculation of Suspensions	111
7.9	Criteria for Stabilisation of Dispersions with Double Layer Interaction	113
	References	114
8	Stability of Disperse Systems Containing Adsorbed Nonionic Surfactants or Polymers: Steric Stabilisation	115
8.1	Introduction	115
8.2	Interaction between Particles Containing Adsorbed Nonionic and Polymeric Surfactant Layers (Steric Stabilisation)	116
8.3	Mixing Interaction G_{mix}	117
8.4	Elastic Interaction G_{el}	118
8.5	Total Energy of Interaction	119
8.6	Criteria for Effective Steric Stabilisation	120
8.7	Flocculation of Sterically Stabilised Dispersions	121
8.7.1	Weak Flocculation	121
8.7.2	Incipient Flocculation	121
8.7.3	Depletion Flocculation	122
	References	123

9	Formulation of Solid/Liquid Dispersions (Suspensions)	125
9.1	Introduction	125
9.2	Preparation of Suspensions	126
9.3	Condensation Methods: Nucleation and Growth	126
9.4	Dispersion Methods	128
9.4.1	Wetting of Powders by Liquids	129
9.4.2	Structure of the Solid/Liquid Interface and the Electrical Double Layer	131
9.4.2.1	Electrical Double Layer Repulsion	132
9.4.2.2	van der Waals Attraction	132
9.4.2.3	Total Energy of Interaction	133
9.4.2.4	Criteria for Stabilisation of Suspensions with Double Layer Interaction	135
9.4.2.5	Electrokinetic Phenomena and the Zeta-Potential	135
9.4.2.6	Calculation of the Zeta-Potential	136
9.4.2.7	Measurement of the Zeta-Potential	137
9.4.3	Dispersing Agents for Formulation of Suspensions	139
9.4.4	Adsorption of Surfactants at the Solid/Liquid Interface	139
9.4.5	Steric Stabilisation of Suspensions	141
9.4.6	Flocculation of Sterically Stabilised Suspensions	143
9.4.7	Properties of Concentrated Suspensions	144
9.4.8	Characterisation of Suspensions and Assessment of their Stability	149
9.4.8.1	Optical Microscopy	150
9.4.8.2	Electron Microscopy	151
9.4.8.3	Confocal Laser Scanning Microscopy	151
9.4.8.4	Scattering Techniques	151
9.5	Bulk Properties of Suspensions	152
9.5.1	Rheological Measurements	152
9.5.2	Sedimentation of Suspensions and Prevention of Formation of Dilatant Sediments (Clays)	153
9.5.3	Prevention of Sedimentation and Formation of Dilatant Sediments	156
	References	159
10	Formulation of Liquid/Liquid Dispersions (Emulsions)	161
10.1	Introduction	161
10.1.1	Creaming and Sedimentation	161
10.1.2	Flocculation	162
10.1.3	Ostwald Ripening (Disproportionation)	162
10.1.4	Coalescence	163
10.1.5	Phase Inversion	163
10.2	Industrial Applications of Emulsions	163
10.3	Physical Chemistry of Emulsion Systems	164
10.3.1	The Interface (Gibbs Dividing Line)	164

10.3.2	Thermodynamics of Emulsion Formation and Breakdown	165
10.3.3	Interaction Energies (Forces) between Emulsion Droplets and Their Combinations	166
10.3.3.1	van der Waals Attractions	166
10.3.3.2	Electrostatic Repulsion	167
10.3.3.3	Steric Repulsion	170
10.4	Adsorption of Surfactants at the Liquid/Liquid Interface	172
10.4.1	Mechanism of Emulsification	174
10.4.2	Methods of Emulsification	175
10.4.3	Role of Surfactants in Emulsion Formation	177
10.4.4	Role of Surfactants in Droplet Deformation	179
10.5	Selection of Emulsifiers	183
10.5.1	The Hydrophilic–Lipophilic Balance (HLB) Concept	183
10.5.2	The Phase Inversion Temperature (PIT) Concept	186
10.6	Creaming or Sedimentation of Emulsions	187
10.6.1	Creaming or Sedimentation Rates	188
10.6.1.1	Very Dilute Emulsions ($\phi < 0.01$)	188
10.6.1.2	Moderately Concentrated Emulsions ($0.2 < \phi < 0.1$)	189
10.6.1.3	Concentrated Emulsions ($\phi > 0.2$)	189
10.6.2	Prevention of Creaming or Sedimentation	190
10.6.2.1	Matching the Density of Oil and Aqueous Phases	190
10.6.2.2	Reduction of Droplet Size	190
10.6.2.3	Use of ‘Thickeners’	190
10.6.2.4	Controlled Flocculation	191
10.6.2.5	Depletion Flocculation	191
10.7	Flocculation of Emulsions	192
10.7.1	Mechanism of Emulsion Flocculation	193
10.7.1.1	Flocculation of Electrostatically Stabilised Emulsions	193
10.7.1.2	Flocculation of Sterically Stabilised Emulsions	195
10.8	General Rules for Reducing (Eliminating) Flocculation	196
10.8.1	Charge-Stabilised Emulsions (e.g., Using Ionic Surfactants)	196
10.8.2	Sterically Stabilised Emulsions	196
10.9	Ostwald Ripening	196
10.10	Emulsion Coalescence	198
10.10.1	Rate of Coalescence	200
10.11	Phase Inversion	200
	References	201
11	Formulation of Suspoemulsions (Mixtures of Suspensions and Emulsions)	203
11.1	Introduction	203
11.2	Suspoemulsions in Paints	204
11.2.1	Suspoemulsions in Sunscreens and Colour Cosmetics	207
11.3	Suspoemulsions in Agrochemicals	219

11.3.1	Model Suspoemulsion of Polystyrene Latex and Isoparaffinic Oil stabilised with Synperonic PE (PEO–PPO–PEO A-B-A Block Copolymer)	225
11.3.2	Model Systems of Polystyrene Latex with Grafted PEO Chains and Hexadecane Emulsions	227
	References	230
12	Formulation of Multiple Emulsions	231
12.1	Introduction	231
12.2	Preparation of Multiple Emulsions	232
12.3	Types of Multiple Emulsions	233
12.4	Breakdown Processes of Multiple Emulsions	233
12.5	Factors Affecting Stability of Multiple Emulsions, and Criteria for Their Stabilisation	235
12.6	General Description of Polymeric Surfactants	237
12.7	Interaction between Oil or Water Droplets Containing an Adsorbed Polymeric Surfactant: Steric Stabilisation	238
12.8	Examples of Multiple Emulsions Using Polymeric Surfactants	246
12.9	Characterisation of Multiple Emulsions	247
12.9.1	Droplet Size Measurements	247
12.10	Rheological Measurements	248
	References	249
13	Preparation of Nanosuspensions	251
13.1	Introduction	251
13.2	Nucleation and Growth, and Control of Particle Size Distribution	252
13.3	Preparation of Nanosuspensions by Bottom-Up Processes	254
13.3.1	Solvent–Antisolvent Method	255
13.3.2	Use of a Nanoemulsion	255
13.3.3	Mixing Two Microemulsions	256
13.3.4	Preparation of Polymer Nanoparticles by Miniemulsion or Minisuspension polymerisation	256
13.4	Preparation of Nanosuspensions Using the Bottom-Down Process	257
13.4.1	Wetting of the Bulk Powder	257
13.4.2	Breaking of Aggregates and Agglomerates into Individual Units	260
13.4.3	Wet Milling or Comminution	260
13.4.4	Stabilisation of the Resulting Dispersion	261
13.4.5	Prevention of Ostwald Ripening (Crystal Growth)	268
	References	268
14	Formulation of Nanoemulsions	271
14.1	Introduction	271
14.2	Mechanism of Emulsification	273

14.3	Methods of Emulsification and the Role of Surfactants	275
14.4	Preparation of Nanoemulsions	276
14.4.1	High-Pressure Homogenisation	276
14.4.2	Phase Inversion Composition (PIC) Principle	277
14.4.3	Phase Inversion Temperature (PIT) Principle	277
14.4.4	Preparation of Nanoemulsions by Dilution of Microemulsions	279
14.5	Steric Stabilisation and the Role of the Adsorbed Layer Thickness	281
14.5.1	Ostwald Ripening	283
14.5.2	Practical Examples of Nanoemulsions	284
14.5.3	Nanoemulsions Based on Polymeric Surfactants	293
	References	299
15	Formulation of Microemulsions	301
15.1	Introduction	301
15.2	Thermodynamic Definition of Microemulsions	302
15.3	Mixed-Film and Solubilisation Theories of Microemulsions	303
15.3.1	Mixed-Film Theories	303
15.3.2	Solubilisation Theories	305
15.4	Thermodynamic Theory of Microemulsion Formation	307
15.4.1	Reason for Combining Two Surfactants	308
15.4.2	Factors Determining W/O versus O/W Microemulsions	309
15.5	Characterisation of Microemulsions Using Scattering Techniques	311
15.5.1	Time-Average (Static) Light Scattering	311
15.5.2	Calculation of Droplet Size from Interfacial Area	313
15.5.3	Dynamic Light Scattering (Photon Correlation Spectroscopy; PCS)	314
15.6	Characterisation of Microemulsions Using Conductivity	315
15.7	NMR Measurements	316
15.8	Formulation of Microemulsions	317
15.8.1	The HLB System	318
15.8.2	Phase Inversion Temperature (PIT) Method	319
15.8.3	The Cohesive Energy Ratio (CER) Concept	320
15.8.4	Cosurfactant Partitioning	322
	References	322
	Further Reading	323
16	Formulation of Foams	325
16.1	Introduction	325
16.2	Foam Preparation	326
16.3	Foam Structure	327
16.4	Classification of Foam Stability	328
16.5	Drainage and Thinning of Foam Films	329
16.6	Theories of Foam Stability	330

16.6.1	Surface Viscosity and Elasticity Theory	330
16.6.2	The Gibbs–Marangoni Effect Theory	330
16.6.3	Surface Forces Theory (Disjoining Pressure π)	331
16.6.4	Stabilisation by Micelles (High Surfactant Concentrations > cmc)	334
16.6.5	Stabilisation by Lamellar Liquid Crystalline Phases	334
16.6.6	Stabilisation of Foam Films by Mixed Surfactants	334
16.7	Foam Inhibitors	335
16.7.1	Chemical Inhibitors That Lower Viscosity and Increase Drainage	335
16.7.2	Solubilised Chemicals Which Cause Antifoaming	335
16.7.3	Droplets and Oil Lenses Which Cause Antifoaming and Defoaming	336
16.7.4	Surface Tension Gradients (Induced by Antifoamers)	336
16.7.5	Hydrophobic Particles as Antifoamers	337
16.7.6	Mixtures of Hydrophobic Particles and Oils as Antifoamers	338
16.8	Physical Properties of Foams	338
16.8.1	Mechanical Properties	338
16.8.2	Rheological Properties	339
16.8.3	Electrical Properties	340
16.8.4	Electrokinetic Properties	340
16.8.5	Optical Properties	341
16.9	Experimental Techniques for Studying Foams	341
16.9.1	Studies on Foam Films	341
16.9.2	Structural Parameters of Foams	342
16.9.3	Foam Drainage	342
16.9.4	Foam Collapse	343
	References	343

21.3	Assessment and Prediction of Emulsion Coalescence Using Rheological Techniques	459
21.3.1	Introduction	459
21.3.2	Rate of Coalescence	459
21.3.3	Rheological Techniques	460
21.3.3.1	Viscosity Measurements	460
21.3.3.2	Measurement of Yield Value as a Function of Time	461
21.3.3.3	Measurement of Storage Modulus G' as a Function of Time	461
21.3.4	Correlation between Elastic Modulus and Coalescence	462
21.3.5	Cohesive Energy E_c	463
	References	463
