 - manganese oxide nanowall arrays 50
 - MoO₃nanoplatelets 51, 53
 - single crystalline platinum (Pt) nanosheets 49
 - sol-gel process 51
 - solvothermal processes 51
 - three electrode electrochemical cell system 49
 - two electrode electrochemical cell system 49
 - types 47, 48

- zinc oxide nanoplatelets, CVD 51
- ZnO nanoparticles 52, 53
- 2D nanofilm 40
- 2,2,6,6-tetramethyl-1-(pyperidinyloxy) radical (TEMPO)-mediated oxidation 262
- type I superconductor 26
- type II superconductor 26

- u**
- ultrasonically-assisted latex mixing and *in situ* reduction (ULMR) process 127
- ultrasonication methods, CNT 83–85, 290

- v**
- Valonia 268
- V-sharp amphiphilic zinc porphyrin 35
- van der Waals bonding 108
- viscosities 171

- w**
- whey protein 313

- x**
- X-ray diffraction (XRD) 125, 126
- xylan (XH) films 409

- z**
- zeolites 6
 - advantages 188
 - applications
 - - batteries 210
 - - catalysts 188
 - - drug encapsulation 188
 - - DSSC 209, 210
 - - fuel cell 208, 209
 - - hydrogen (H_2) storage 213, 214
 - - ion exchange beds 188
 - - micro-electronics 188
 - - oil refining process 211, 212
 - - optically active materials 188
 - - photocatalysts 212
 - - photoelectrochemical applications 188
 - - polymerization science 188
 - - separation technology 188
 - - in sorbents 188
 - - thin-film sensors 188
 - - water purification 188
 - artificial 187
 - chabazite 187
 - chemical composition 187
 - chemical properties
 - - adsorption 207
 - basicity 206
 - - ion-exchange 207
 - classification 188
 - - based on the crystal structure 194
 - - based on pore size 192, 193
 - - based on ring structure 193
 - - based on Si/Al ratio 193, 194
 - - mesoporous zeolites 191
 - - microporous zeolites 191
 - - on structural building units 192
 - clinoptilite 187
 - clinoptilolite and plagioclase 187
 - CO_2 capture 214
 - crystalline microporous aluminosilicates 187
 - electrical properties 205
 - energy production devices 215
 - ex-situ composite formation 203
 - gas removal 215
 - history 197
 - hydrophobic properties 205
