

## Index

### *a*

- Acetaminophen (Paracetamol)
  - AERD 240
  - analgesic actions 394ff, 397, 407
  - analgesic nephropathy 222
  - asthma 257
  - hepatotoxicity 216
  - mode of action 82
  - osteoarthritis 407f
- Acetylsalicylic acid (ASA) *see aspirin*
- Acute coronary syndrome (see coronary vascular disease)
- Adenomatous polyposis coli (APC) 431ff
- Allodynia 143
- Alzheimer's disease 438ff
  - clinical trials 440ff
  - epidemiology 438
  - etiology 438
  - general aspects 438
  - mode of aspirin action 439f
  - NSAIDs 439f
  - pathophysiology 438f
- Anandamide 77, 85, 144
- Angioedema 244
- Anticoagulants
  - cerebrovascular disease 321ff
  - coronary vascular disease 295ff
  - NOAC 296
  - peripheral arterial disease 358
  - venous thrombosis 350
- Antiplatelet drugs 123
- Antipyretic analgesics 390ff
- Antitumorigenic effects of aspirin – *see malignancies*
- Apixaban (*see NOAC*)
- Aprotinin 187
- Arachidonic acid 77ff
  - metabolism via COX-1/2 122
- Arthritis (*see: Osteoarthritis, see: Rheumatoid arthritis*)
- Aspirin (*see also special items, see also "salicylate"*)
  - absorption 54ff
  - acetylation reactions 34, 66ff, 78ff, 89ff

- alcohol 55
- analgesic actions 25, 143ff, 390ff
- analogues 34
- angioedema 244f
- antiinflammatory actions 15, 25, 95f, 138f, 273f
- antiplatelet actions 115ff, 269f
- antipyretic actions 15, 148ff, 394
- antitumor effects 33, 153, 156ff, 419ff
- antiulcer drugs 209
- bioavailability 57
- biotransformations 66ff
- bleeding risk 26, 180, 184ff, 193, 292
- bleeding-time 26f, 180ff
- cerebrovascular diseases 307ff
- chemical properties 43
- coagulation factors 128, 182ff
- coronary vascular disease 269ff
- COX-independent actions 160ff
- COX-inhibition 78ff
- desensitization 239f
- determination 47ff
- diabetes 282f
- dissolution 43, 55
- distribution 60f
- dosing 119ff, 171f, 180, 274f, 288f, 311f, 361ff, 380ff, 391ff
- ductus arteriosus Botalli 193
- elderly patients 193ff
- endothelial protection 125ff
- energy metabolism 18f, 101ff
- esterases 66ff
- excretion 71
- fetal toxicity 191f
- fertility 191f
- fibrinolysis 128f, 286f
- formulations 43, 57ff, 392ff
- gene transcription 84f, 89ff
- generics 43ff
- GI-toxicity 198ff
- habituation 177

- heart failure 224f
- heme oxygenase-1 126f
- hemostasis 113
- hepatotoxicity 216f
- history 5ff
- hypersensitivity (*see "aspirin exacerbated respiratory disease, see "urticarial/angioedema"*)
- hyperthermia 174, 394ff
- inflammation 136ff
- inhibition of prostaglandin synthesis 19, 76, 78ff
- inhibition of platelet function 118ff
- inhibition of platelet thromboxane formation 119ff
- inhibition of kinases 92ff
- interactions with NSAIDs 82ff, 123, 141ff, 297, 375f, 408
- interaction with salicylate 123
- metabolism – hepatic cytochromes 69
- miscarriage 192
- myocardial infarction – Craven studies 27
- modes of action 75ff
- nitric oxide production 91ff, 125ff
- nuclear factor kB (NFkB) 97, 161
- peripheral arterial disease 330ff
- pharmacokinetics 54ff.
- plasma levels 61f
- pregnancy 191ff
- prostaglandins 19f, 124f
- renal failure 223
- «resistance» (*see Aspirin "resistance"*)
- Reye's syndrome 247ff
- sphingosine-1-phosphate 159f, 421f
- "Spanish flu" 172
- stomach (*see also GI tract*)
- surgical interventions 291ff
- synthesis 9ff
- teratogenicity 191f
- thrombin formation 116, 182ff
- toxicity 169ff
- transcription factors 96ff, 161
- urticaria 244f
- withdrawal 185f, 290, 292, 312
- aspirin exacerbated respiratory disease (AERD) 233ff
  - clinical trials 239f
  - COX1/2 238
  - epidemiology 233f
  - leukotrienes 234ff
  - lipoxins 236
  - mode of aspirin action 237ff
  - pathophysiology 234
  - prostaglandins 237f
  - treatment 239ff
- "aspirin-induced asthma" (*see Aspirin exacerbated respiratory disease, AERD*)

  - stroke subtypes 313, 316ff
  - thromboxane 308f
- Cilostazol
  - cerebrovascular disease 321
  - mode of action 321
  - peripheral arterial disease 338f
- Clinical trials, types of 267
- Clopidogrel

- cerebrovascular disease 318f
  - coronary vascular disease 288ff, 292ff
  - mode of action 116
  - peripheral arterial disease 337f
  - “resistance” 370
  - Coagulation 128
  - Colorectal adenomas (*see: adenomatosis polyposis coli*)
  - Colorectal cancer 33, 153ff, 418ff
    - aspirin-triggered lipoxin (ATL) 159, 421
    - clinical trials-primary prevention 423ff
    - clinical trials-secondary prevention 428ff
    - COX-1 154f
    - COX-2 154, 428f
    - coxibs 408, 431f
    - epidemiology 418
    - etiology 418f
    - Lynch syndrome 427f
    - modes of aspirin action 156ff, 419ff
    - NSAIDs 431f
    - pathophysiology 154ff, 419
    - prostaglandins 153
    - sphingosine-1-phosphate 159f, 421ff
  - Coronary vascular disease 269ff
    - ACE inhibitors 296
    - anticoagulants 295f
    - aspirin, historical use of 27ff, 270
    - clinical trials- Acute coronary syndrome (ACS) 285ff
    - clinical trials-Primary prevention 275ff
    - clinical trials-Secondary prevention 285ff
    - clinical trials - Coronary artery bypass surgery (CABG) 291ff
    - clopidogrel 292ff
    - coxibs 408
    - dual antiplatelet therapy 288, 292
    - epidemiology 270
    - etiology 269f
    - mode of aspirin action 271ff
    - NSAIDs 297, 408
    - pathophysiology 269f
    - percutaneous coronary interventions (PCI) 288
    - platelets 271f
    - statins 297, 382
  - COX (*see also isoforms*)
    - atherosclerosis 124
    - gastric mucosa 200ff
    - general aspects 20f, 76ff
    - gene expression
    - historical aspects 13ff.
    - inhibition by aspirin 78ff
  - COX-1
    - antiplatelet actions of aspirin 115ff
    - “aspirin-induced asthma” (AERD) 238f
    - acetylation by aspirin 78ff
    - colorectal cancer 154f
    - general properties 76ff
    - inhibition by with NSAIDs 82ff
    - platelet function 79ff
  - COX-2
    - acetylation by aspirin 21f, 80f
    - colorectal cancer 154, 419ff
    - general properties 76ff
    - inflammation 137 ff
    - lipoxins 81f
    - platelet function 377
    - stomach mucosa 200ff
    - transcription factors 158
  - COX-3 77
  - Coxibs
    - cardiovascular risk 408
    - colorectal cancer 431f
    - GI effects 209f
    - interactions with aspirin 408
  - Craven, Lawrence L. 27f
  - Cyclooxygenase(s) (*see COX*)
- d**
- Dabigatran (*see NOAC*)
  - Deep vein thrombosis (*see: venous thrombosis*)
  - Desmopressin (DDAVP) 187
  - Diabetes 282ff
    - antiplatelet action of aspirin 283f
    - clinical trials with aspirin 224, 283
    - thrombotic risk 282f
  - Dicarboxylic fatty acids 105ff, 248
  - Dipyridamole
    - cerebrovascular disease 319ff
    - mode of action 319
    - peripheral arterial disease 338
  - Dipyrrone (Metamizole) 408f
  - Disease-modifying antirheumatic drugs (DMARDs) 405
  - Dreser, Heinrich 10
  - Ductus arteriosus Botalli 192f
  - Duisberg, Carl 9ff
- e**
- Edoxaban (*see NOAC*)
  - Eichengrün, Arthur 9ff
  - Elwood, Peter C 29, 270
  - Endocannabinoids 144
  - Endothelium
    - general aspects 123f
    - inhibition of prostacyclin production by aspirin 81f, 124f
    - anticoagulatory factors 123f

- atherosclerosis 124
- dysfunction 124f, 140f, 273, 331
- inflammation 140
- NO-synthase (eNOS) 91ff, 125f
- prostacyclin production 124f
