Preface *IX*

Acknowledgments *XI*

List of Abbreviations *XIII*

Part I **Fundamentals** *1*

1 **Chirality** *3*

1.1 Introduction *3*

1.2 Tetrahedron of Carbon *9*

1.2.1 Terpenoids *9*

1.2.2 Flavonoids *13*

1.2.3 Alkaloids *14*

1.2.4 Steroids *16*

1.2.5 Glycosides *17*

1.2.6 Others *18*

1.3 Other Stereogenic Centers *19*

1.4 Optical Characteristics *23*

1.4.1 Measurement of OR *24*

1.4.2 ECD and Its Definition *25*

1.4.3 Outline of VCD *26*

1.4.4 Outline of ROA *27*

References *28*

2 **Non-optical Method in Configuration Study** *31*

2.1 ¹³C NMR Spectra *31*

2.1.1 NMR and Atomic Structure *31*

2.1.2 ¹³C NMR Calculation *32*

2.1.3 ¹H NMR *34*

2.1.4 ¹³C NMR Prediction and Conformational Search *34*

2.2 X-Ray Diffraction and Mosher Method *41*

2.2.1 X-Ray Diffraction *41*

2.2.2 Mosher Method *44*

2.3 Transition State Energy and Chirality Selectivity *51*

2.4	Separation of Chiral Compounds	53
2.4.1	Chiral Organic Bases	53
2.4.2	Chiral Organic Acids	53
2.4.3	Chiral Organic Alcohols	53
2.4.4	Others	54
	References	55

Part II Techniques 57

3	Optical Rotation (Rotatory Dispersion, ORD)	59
3.1	Introduction	59
3.2	Quantum Theory	59
3.3	Matrix Model	63
3.3.1	Matrix Basis	65
3.3.2	Explanation of General OR Characteristics	68
3.3.2.1	Sample Calculations	68
3.3.2.2	Calculated Values in Same Series of Compounds	73
3.4	ORD	77
3.5	Application	77
3.5.1	AC Assignment for Mono-Stereogenic Center Compounds	79
3.5.2	Matrix Model Application	80
3.5.3	AC Assignment for Poly-Stereogenic Center Compounds	82
3.5.4	Using ORD Method	83
	References	84
4	Electronic Circular Dichroism	87
4.1	Exciton Chirality CD	87
4.2	ECD Characteristics for Chiral Metallic Compounds	92
4.3	Quantum Theory Basis	94
4.4	Principle Using ECD	95
4.5	Application	97
4.5.1	Procedure to Do ECD	97
4.5.2	ECD Application	97
4.5.3	UV Correction	102
	References	105
5	Vibrational Circular Dichroism and Raman Optical Activity	107
5.1	Exciton Chirality	108
5.2	Quantum Theory Basis	109
5.2.1	VCD and IR	109
5.2.2	ROA and Raman Scattering	110
5.3	Principles Using VCD and ROA	113
5.4	Application	115
5.4.1	VCD Application	115

5.4.2	ROA Application	124
	References	126
6	Combinational Use of Different Methods	129
6.1	Tactics to Select Methods	129
6.1.1	¹³ C NMR Methods	130
6.1.2	OR and ORD	131
6.1.3	Matrix	132
6.1.4	ECD	132
6.1.5	VCD Method	133
6.2	Examples and Discussion	133
6.3	Revised Structures	138
6.3.1	ORD Method	139
6.3.2	Combinational Use of OR and ECD	144
6.3.3	VCD and ECD	146
6.3.4	Comprehensive Use of OR, ECD, and VCD	147
	References	160
Part III	Reactions	163
7	Enantioselective Reaction	165
7.1	Enantioselective Addition	165
7.1.1	Organic Zn- or Zn-Ti Reagent	165
7.1.2	Organic Cu–Zn, Cu–Li Reagent	169
7.1.3	Organo-Fe Complexes	173
7.1.4	Other Organo-Metallic Complexes	175
7.1.5	Organo-Si Reagents	178
7.2	Enantioselective Reduction	178
7.2.1	Green Chemistry	181
7.3	Enantioselective Oxidation	184
7.4	Prediction of ee Using Calculations	185
7.5	Catalyst Types	189
7.5.1	Amino Alcohols	189
7.5.2	Chiral Ligands Containing N–O Group	190
7.5.3	Chiral Axial Catalysts	191
7.5.4	Solid-Supported Chiral Compounds	192
7.5.5	Spiral Chiral Compounds	193
7.5.6	Asymmetric-Axle-Supported Chiral Catalyst	194
7.5.7	Chiral Schiff-Base Ligands	195
7.5.8	Some Asymmetric Lewis Acids	196
7.5.9	Organic P-Containing Ligands	197
7.6	Three Phenomena	198
7.6.1	Chirality Amplification (Nonlinear Effect)	198
7.6.2	Auto-Self Catalysis	199

7.6.3	Odd–Even Carbon Effect	199
	References	201
8	Chemoselective Reaction	205
8.1	Chemoselective Additions	205
8.1.1	Addition to C=O or C=C Groups	205
8.2	Chemoselective Reduction	210
8.3	Chemoselective Oxidation	225
8.4	Other Chemoselective Reactions	231
	References	237
9	Stereoselective Reaction	241
9.1	Conformational Study	241
9.2	Effect of Conformation on Reactions	247
9.3	Regioselective Reactions	251
9.4	Diastereoselective Reactions	260
9.4.1	Diastereoselective Additions	260
9.4.2	Other Diastereoselective Reactions	270
9.5	Calculation Using Theoretical Protocol	272
	References	277
10	Total Organic Synthesis	279
10.1	Introduction	279
10.2	Retrosynthesis Strategies	279
10.3	Examples in Synthesis	285
10.3.1	(+)-Hirsutene	285
10.3.2	(2R,3S)-Rubiginone A ₂ and Its Analog	287
10.3.3	(+)-Brefeldin A	290
10.3.4	Malyngamide U and Its AC Reassignment	292
10.3.5	Taxol Derivatives	296
10.3.6	Amphidinolide T2 and Its Derivatives	298
10.3.7	(+)-Vindoline	303
10.4	Calculation in Total Synthesis	306
	References	309
	Index	313
