List of Contributors *XIII*

Part I Materials and Processes *1*

1	Synthesis, Assembly, and Applications of Semiconductor Nanomembranes	3
	<i>Zheng Yan, Kewang Nan, and John A. Rogers</i>	
1.1	Introduction	3
1.2	Strategies for Forming Silicon Nanomembranes	4
1.2.1	Selective Etching to Release Nanomembranes from Layered Assemblies	4
1.2.2	Anisotropic Etching to Release Silicon Nanomembranes from Bulk Silicon Wafers	6
1.3	Transfer Printing for Deterministic Assembly	7
1.3.1	Introduction	7
1.3.2	Mechanics of Transfer Printing	9
1.3.3	Transfer Printing for Single- and Multilayer Deterministic Assembly	10
1.4	Compressive Buckling for Deterministic Assembly	11
1.4.1	Introduction	11
1.4.2	Buckling on Compliant Substrates for Wavy Layouts	13
1.4.3	Patterned Adhesion for Controlled, Large-Scale Buckling	16
1.4.4	Deterministic Assembly of Complex, Three-Dimensional Architectures by Compressive Buckling	18
1.5	Functional Devices Made from Silicon Nanomembranes	21
1.5.1	Physically Transient Electronics	21
1.5.2	Injectable, Cellular-Scale Optoelectronic Devices for the Brain	23
1.5.3	Three-Dimensional Integumentary Membranes for Spatiotemporal Cardiac Measurements	25
1.5.4	Arthropod Eyes Inspired Digital Camera	27
1.5.5	Cephalopod Skins Inspired Optoelectronic Camouflage Systems	29
1.6	Conclusions and Outlook	29
	References	31

2	Models of Reactive Diffusion for Resorbable Electronics	37
	<i>Huanyu Cheng, Yonggang Huang, and John A. Rogers</i>	
2.1	Introduction	37
2.2	Hydrolysis of Silicon Nanomembranes	39
2.3	Material-Level Dissolution	41
2.4	Dissolution of Device with Layered Structures	47
2.5	Discussion and Conclusion	53
	Acknowledgments	54
	References	54
	Part II Applications in Bio-Integrated and Flexible Electronics	57
3	Transparent and Foldable Electronics Enabled by Si Nanomembranes	59
	<i>Houk Jang, Tanmoy Das, Wonho Lee, and Jong-Hyun Ahn</i>	
3.1	Introduction	59
3.2	Fabrication	61
3.3	Characterization	64
3.3.1	Mechanical Properties of Si NM in Bending and Stretching	65
3.3.2	Optical Properties	67
3.3.3	Piezoresistive Effect in Si NM	69
3.4	Configurations of Transparent and Foldable Electronic Devices	72
3.4.1	Representative Materials for Transparent and Foldable Electronics	72
3.4.2	Electrical and Optical Properties of Transparent TFTs	73
3.4.3	Modification of the Bending Stiffness with Substrate Thickness	75
3.4.4	Electromechanical Properties of Foldable TFTs	77
3.4.5	Control of Stiffness by Thinning of Si for Stretchable Electronic Devices	78
3.4.6	Control of Strain Distribution by Geometrical Design	79
3.4.7	Mechanical Properties of Stretchable Inverters	82
3.5	Concluding Remarks	83
	References	84
4	High-Performance Flexible Electronic and Optoelectronic Devices by Mechanical Exfoliation from a Brittle Substrate	89
	<i>Davood Shahrjerdi</i>	
4.1	Introduction	89
4.2	Steady-State Substrate Cracking Parallel to the Interface in a Bilayers	90
4.3	Spalling-Mode Fracture for Layer Transfer	92
4.4	High-Performance Flexible Electronics by Controlled Spalling	95
4.4.1	Ultra-Low-Power Nanoscale Silicon Integrated Circuits on Plastic	95
4.4.2	Electrical Characteristics of Flexible Devices and Circuits	100

4.4.3	Effect of Strain on Device Performance	102
4.4.4	Very-High-Efficiency Flexible Tandem Solar Cells	104
4.5	Future Directions	106
	References	108
5	High-Speed, Flexible Electronics by Use of Si Nanomembranes	113
	<i>Yei Hwan Jung, Jung-Hun Seo, Weidong Zhou, and Zhenqiang Ma</i>	
5.1	Introduction	113
5.2	Fabrication of High-Speed MOSFETs	114
5.2.1	Doping Profile Settings	114
5.2.2	Generic Fabrication Process	115
5.3	Design and Performance of High-Speed MOSFET	118
5.4	High-Speed MOSFET Using Strained Si NMs	121
5.4.1	SiGe-Based Strain Engineering	121
5.4.2	Fabrication of Flexible Strained-Channel RF TFTs	125
5.4.3	DC/RF Characteristics of Flexible Strained-Channel RF TFTs	126
5.5	High-Speed Diodes and Switches with Si NMs	129
5.5.1	Fabrication of Flexible RF Diodes and Switches	129
5.5.2	RF Characteristics of Flexible RF Diodes/Switches	132
5.5.3	Analytical Modeling of Flexible RF Diodes/Switches	134
5.6	Outlook toward Future Fast Electronics	135
	References	137
6	Flexible and Stretchable Biointegrated Electronics Using Silicon Nanomembranes	143
	<i>Jaemin Kim, Mincheol Lee, Hyung Joon Shim, and Dae-Hyeong Kim</i>	
6.1	Introduction	143
6.2	Overview of Flexible Organic/NW-Based Biomedical Devices	144
6.2.1	Flexible Organic Biomedical Devices	144
6.2.2	Flexible NW-Based Biomedical Devices	147
6.3	Flexible/Stretchable Single-Crystal Silicon-Based Biomedical Devices	148
6.3.1	Fabrication Processes of Si NM Electronics	148
6.3.2	Human Motion Detectors Using Wearable Si NM Strain Gages	150
6.3.3	Organ Motion Detectors Using Implantable Si NM Strain Gages	152
6.3.4	Si NM Temperature Sensors for Physiological Monitoring	154
6.3.5	Integrated Array Configuration of Si NM Sensors	155
6.4	Actively Multiplexed Electrophysiology Using Si NM Transistors	157
6.4.1	Multiplexed Electrode Array for Neural Activity Monitoring	158

6.4.2	Multiplexed Electrode Array for Cardiac Electrophysiology Mapping	160
6.5	Conclusions	161
	Acknowledgments	162
	References	162
7	Flexible Si Nanomembrane Sensor for Human–Machine Interface	169
	<i>Min-Seok Kim</i>	
7.1	Introduction	169
7.2	Si NM-Based Tactile Sensor	170
7.2.1	Overview of Tactile Sensing Technologies	170
7.2.2	Design and Fabrication of Si NM-Based Tactile Sensor	172
7.2.3	Perspectives and Outlook of Si -NM-Based Tactile Sensor	181
7.3	Si NM-Based Flexible Sensor for Biological Signal Monitoring and Motion Sensing of Humans	182
7.3.1	Overview	182
7.3.2	Epidermal and Wearable Devices	183
7.3.3	Implantable Devices	190
7.3.4	Biodegradable and Transient Devices	193
7.3.5	Perspectives and Outlook of Wearable, Implantable, and Transient Electronics	195
7.4	Summary	197
	Acknowledgments	199
	References	199
8	Flexible and Transparent Solar Cells Using Si Nanomembranes	203
	<i>Jongseung Yoon</i>	
8.1	Introduction	203
8.2	Fabrication of Ultrathin Monocrystalline Silicon Solar Cells	204
8.3	Transfer Printing of Ultrathin Silicon Solar Cells	208
8.4	Photovoltaic Performance of Printed Silicon Microcells	211
8.5	Unconventional Module Designs of Ultrathin Silicon Microcells	212
8.5.1	Modules with High Degrees of Mechanical Flexibility	212
8.5.2	Modules with Definable Optical Transparency	215
8.5.3	Modules with Microscale Concentrator Optics	216
8.5.4	Modules with a Compact Size, High Voltage Outputs	217
8.6	Photon Management for Ultrathin Silicon Microcells	219
8.6.1	Microcells with Hexagonally Periodic Nanoposts	219
8.6.2	Microcells with Density-Graded Surface Nanostructures	232
8.7	Conclusion	233
	Acknowledgment	237
	References	237

9	Silicon Nanomembranes for Efficient and Precise Molecular Separations 241
	<i>Karl J. P. Smith, Joshua D. Winans, and James L. McGrath</i>
9.1	Introduction 241
9.2	Separation Science 241
9.3	Silicon Nanomembranes 246
9.3.1	Porous Nanocrystalline Silicon 247
9.3.2	Track-Etched 248
9.3.3	Interferometric 248
9.3.4	Micromachined 249
9.3.5	Block Copolymer 249
9.3.6	Direct Drilling 250
9.4	Applications 250
9.4.1	Hemodialysis 250
9.4.2	Biotech Therapeutics Preparation 251
	References 253
10	Nanomembranes as Protein Mass Spectrometers 257
	<i>Jonghoo Park, Lloyd M. Smith, Maria Arbulu, Thales V.A.G. de Oliveira, and Robert H. Blick</i>
10.1	Introduction 257
10.2	Chemical Perspective and Current Limitations 258
10.3	Protein Mass Sensors 260
10.4	Nanomembrane Operating Basics 260
10.5	Field-Emission Mechanics 264
10.6	Field Emission Cooling 267
10.7	Summary 269
	Acknowledgments 269
	References 269
	Part III Applications in Thermoelectrics and Optics 271
11	Semiconductor Nanomembranes for Fano Resonance Photonic Crystal Devices 273
	<i>Weidong Zhou, Zhenqiang Ma, Hongjun Yang, Deyin Zhao, Yi-Chen Shuai, and Jung-Hun Seo</i>
11.1	Introduction 273
11.2	Principles of Fano Resonance in Photonic Crystal Slabs 274
11.3	Fano Resonance Photonic Crystal Filters 275
11.3.1	Single-Layer Filters 275
11.3.2	Double-Layer Fano Resonance Filters 277
11.3.3	Double-Layer Fano Resonance Filters with Controlled Lattice Displacement 279
11.4	Fano Resonance Photonic Crystal Membrane Reflectors 282
11.4.1	Broadband Reflector Design 283

11.4.2	Different Configurations and Buffer Layer Design	284
11.5	Fano Resonance Photonic Crystal Membrane Lasers	286
11.6	Design of MR-VCSELs	286
11.6.1	MR-VCSEL Fabrication and Configurations	289
11.6.1.1	Epitaxial Growth Approach	289
11.6.1.2	Wafer Bonding and CMP Techniques	290
11.6.1.3	Transfer Printing Techniques	290
11.7	Fano Resonance Photonic Crystal Field Localization and Absorption Engineering	293
11.7.1	Electromagnetic Field Localization and Enhancement in Photonic Crystal Cavities	293
11.7.2	Demonstration of Spectral-Selective Absorption Enhancement and IR Detectors	293
11.7.2.1	CQD Integrated Si-NM Fano Filters	295
11.7.2.2	Fano Resonance Enhanced Photonic Crystal Infrared Photodetectors	295
11.8	Conclusions and Prospects	296
	Acknowledgments	297
	References	298
12	Acoustic Phonons in Ultrathin Free-Standing Silicon Membranes	305
	<i>Clivia M. Sotomayor Torres, Francesc Alzina, Andrey Shchepetov, Emigdio Chavez-Angel, John Cuffe, Bartłomiej Graczykowski, Mika Prunnila, Juan Sebastian Reparaz, and Jouni Ahopelto</i>	
12.1	Introduction	305
12.2	Fabrication of Free-Standing Silicon Membranes	306
12.2.1	Concept and Design	306
12.2.2	Fabrication and Stress Control	307
12.2.3	Structural and Electrical Characterization	309
12.3	Dispersion Relations	310
12.3.1	Discretization and Deviation from Linear Behavior	310
12.3.2	Measurements of Dispersion Relations	312
12.4	Phonon Transport Regimes	313
12.4.1	Phonon Mean Free Path	313
12.4.2	Phonon Lifetime	315
12.5	Contactless Thermal Conductivity Measurements	318
12.6	Discussion	320
12.7	Conclusions	321
	Acknowledgments	322
	References	322
13	Thermoelectric Performance of Silicon Nanostructures	327
	<i>Jinyao Tang</i>	
13.1	Introduction	327
13.2	Basics of Seebeck and Peltier Effect	328

13.3	Enhance Thermoelectric Performance by Reducing Thermal Conductivity	331
13.3.1	Thermal Conductivity Reduction in Silicon Nanowire	333
13.3.2	Thermal Conductivity Reduction in Silicon Thin Film	334
13.4	Enhance Thermoelectric Performance by Enhancing Thermoelectric Power Factor	337
13.4.1	Electron-Phonon Scattering (Phonon Drag)	338
13.4.1.1	Quantum Confinement	339
13.4.1.2	Field Effect Carrier Doping	339
13.5	Conclusion	340
	References	341
	Index	343
