Preface xix

1	Introduction to Optics	1
	<i>Rainer Heintzmann and Ulrich Kubitscheck</i>	
1.1	A Short History of Theories about Light	1
1.2	Properties of Light Waves	2
1.2.1	An Experiment on Interference	2
1.2.2	Physical Description of Light Waves	3
1.3	Four Effects of Interference	7
1.3.1	Diffraction	7
1.3.2	The Refractive Index	9
1.3.3	Refraction	9
1.3.4	Reflection	10
1.3.5	Light Waves and Light Rays	11
1.4	Optical Elements	13
1.4.1	Lenses	13
1.4.2	Metallic Mirrors	15
1.4.3	Dielectric Mirrors	16
1.4.4	Filters	17
1.4.5	Chromatic Reflectors	18
1.5	Optical Aberrations	20
	References	22
2	Principles of Light Microscopy	23
	<i>Ulrich Kubitscheck</i>	
2.1	Introduction	23
2.2	Construction of Light Microscopes	23
2.2.1	Components of Light Microscopes	23
2.2.2	Imaging Path	24
2.2.3	Magnification	26
2.2.4	Angular and Numerical Aperture	27
2.2.5	Field of View	28
2.2.6	Illumination Beam Path	28

2.2.6.1	Critical and Köhler Illumination	28
2.2.6.2	Bright-Field and Epi-Illumination	31
2.3	Wave Optics and Resolution	32
2.3.1	Wave Optical Description of the Imaging Process	33
2.3.2	The Airy Pattern	37
2.3.3	Point Spread Function and Optical Transfer Function	40
2.3.4	Lateral and Axial Resolution	41
2.3.4.1	Lateral Resolution Using Incoherent Light Sources	41
2.3.4.2	Lateral Resolution of Coherent Light Sources	43
2.3.4.3	Axial Resolution	45
2.3.5	Magnification and Resolution	48
2.3.6	Depth of Field and Depth of Focus	49
2.3.7	Over- and Undersampling	50
2.4	Apertures, Pupils, and Telecentricity	50
2.5	Microscope Objectives	53
2.5.1	Objective Lens Design	53
2.5.2	Light Collection Efficiency and Image Brightness	57
2.5.3	Objective Lens Classes	61
2.5.4	Immersion Media	62
2.5.5	Special Applications	65
2.6	Contrast	67
2.6.1	Dark Field	68
2.6.2	Phase Contrast	69
2.6.2.1	Frits Zernike's Experiments	70
2.6.2.2	Setup of a Phase-Contrast Microscope	73
2.6.2.3	Properties of Phase-Contrast Images	74
2.6.3	Interference Contrast	74
2.6.4	Advanced Topic: Differential Interference Contrast	77
2.6.4.1	Optical Setup of a DIC Microscope	77
2.6.4.2	Interpretation of DIC Images	81
2.6.4.3	Comparison between DIC and Phase Contrast	81
2.7	Summary	82
	Acknowledgments	82
	References	83

3 Fluorescence Microscopy 85

Jurek W. Dobrucki and Ulrich Kubitscheck

3.1	Contrast in Optical Microscopy	85
3.2	Physical Foundations of Fluorescence	86
3.2.1	What is Fluorescence?	86
3.2.2	Fluorescence Excitation and Emission Spectra	89
3.3	Features of Fluorescence Microscopy	90
3.3.1	Image Contrast	90
3.3.2	Specificity of Fluorescence Labeling	93
3.3.3	Sensitivity of Detection	94
3.4	A Fluorescence Microscope	95
3.4.1	Principle of Operation	95

3.4.2	Sources of Exciting Light	99
3.4.3	Optical Filters in a Fluorescence Microscope	101
3.4.4	Electronic Filters	103
3.4.5	Photodetectors for Fluorescence Microscopy	104
3.4.6	CCD or Charge-Coupled Device	104
3.4.7	Intensified CCD (ICCD)	107
3.4.8	Electron-Multiplying Charge-Coupled Device (EMCCD)	109
3.4.9	CMOS	111
3.4.10	Scientific CMOS (sCMOS)	112
3.4.11	Features of CCD and CMOS Cameras	112
3.4.12	Choosing a Digital Camera for Fluorescence Microscopy	113
3.4.13	Photomultiplier Tube (PMT)	113
3.4.14	Avalanche Photodiode (APD)	114
3.5	Types of Noise in a Digital Microscopy Image	114
3.6	Quantitative Fluorescence Microscopy	119
3.6.1	Measurements of Fluorescence Intensity and Concentration of the Labeled Target	119
3.6.2	Ratiometric Measurements (Ca ⁺⁺ , pH)	121
3.6.3	Measurements of Dimensions in 3D Fluorescence Microscopy	121
3.6.4	Measurements of Exciting Light Intensity	122
3.6.5	Technical Tips for Quantitative Fluorescence Microscopy	123
3.7	Limitations of Fluorescence Microscopy	124
3.7.1	Photobleaching	124
3.7.2	Reversible Photobleaching under Oxidizing or Reducing Conditions	125
3.7.3	Phototoxicity	125
3.7.4	Optical Resolution	126
3.7.5	Misrepresentation of Small Objects	127
3.8	Summary and Outlook	128
	References	130
	Recommended Internet Resources	131
	Fluorescent Spectra Database	132
4	Fluorescence Labeling	133
	<i>Gerd Ulrich Nienhaus and Karin Nienhaus</i>	
4.1	Introduction	133
4.2	Key Properties of Fluorescent Labels	133
4.3	Synthetic Fluorophores	138
4.3.1	Organic Dyes	138
4.3.2	Fluorescent Nanoparticles	140
4.3.3	Conjugation Strategies for Synthetic Fluorophores	142
4.3.4	Non-natural Amino Acids	146
4.3.5	Bringing the Fluorophore to Its Target	147
4.4	Genetically Encoded Labels	149
4.4.1	Phycobiliproteins	149
4.4.2	GFP-Like Proteins	150

4.5	Label Selection for Particular Applications	155
4.5.1	FRET to Monitor Intramolecular Conformational Dynamics	155
4.5.2	Protein Expression in Cells	159
4.5.3	Fluorophores as Sensors Inside the Cell	160
4.5.4	Live-Cell Dynamics	160
4.5.5	Super-Resolution Imaging	160
4.6	Summary	161
	References	162
5	Confocal Microscopy	165
	<i>Nikolaus Naredi-Rainer, Jens Prescher, Achim Hartschuh, and Don C. Lamb</i>	
5.1	Evolution and Limits of Conventional Widefield Microscopy	165
5.2	Theory of Confocal Microscopy	166
5.2.1	Principle of Confocal Microscopy	166
5.2.2	Radial and Axial Resolution and the Impact of the Pinhole Size	173
5.2.3	Scanning Confocal Imaging	179
5.2.3.1	Stage Scanning	179
5.2.3.2	Laser Scanning	180
5.2.3.3	Spinning Disk Confocal Microscope	181
5.2.4	Confocal Deconvolution	184
5.3	Applications of Confocal Microscopy	186
5.3.1	Nonscanning Applications	186
5.3.1.1	Fluorescence Correlation Spectroscopy	186
5.3.1.2	Fluorescence Cross-Correlation Spectroscopy	190
5.3.1.3	Pulsed Interleaved Excitation	191
5.3.1.4	Burst Analysis with Multiparameter Fluorescence Detection	193
5.3.2	Scanning Applications beyond Imaging	195
5.3.2.1	Number and Brightness Analysis	195
5.3.2.2	Raster Image Correlation Spectroscopy	198
	Acknowledgments	200
	References	200
6	Two-Photon Excitation Microscopy for Three-Dimensional Imaging of Living Intact Tissues	203
	<i>David W. Piston</i>	
6.1	Introduction	203
6.2	What is Two-Photon Excitation?	205
6.2.1	Nonlinear Optics and 2PM	206
6.2.2	History and Theory of 2PM	207
6.3	How Does Two-Photon Excitation Microscopy Work in Practice?	211
6.3.1	The Role of Light Absorption in 2PM	212
6.3.2	The Role of Light Scattering in 2PM	213
6.4	Instrumentation	216
6.4.1	Lasers for 2PM	216
6.4.2	Detection Strategies for 2PM	219

- 6.4.3 The Advantages of 2PM for Deep-Tissue Imaging 220
- 6.5 Limitations of Two-Photon Excitation Microscopy 222
 - 6.5.1 Limits of Spatial Resolution in 2PM 222
 - 6.5.2 Potential Sample Heating by the High Laser Powers in 2PM 223
 - 6.5.3 Difficulties in Predicting and Measuring Two-Photon Excitation Spectra 224
 - 6.5.4 Accelerated Photobleaching (and Associated Photodamage) in the Focal Plane 227
 - 6.5.5 Expensive Lasers Create a Practical Limitation for Some Experiments 228
- 6.6 When is 2PM the Best Option? 229
 - 6.6.1 Thick Specimen including *In Vivo* Imaging 229
 - 6.6.2 Imaging Fluorophores with Excitation Peaks in the Ultraviolet (UV) Spectrum 231
 - 6.6.3 Localized Photochemistry 231
 - 6.7 Applications of Two-Photon Microscopy 231
 - 6.7.1 Imaging UV-Excited Fluorophores, such as NADH for Metabolic Activity 231
 - 6.7.2 Localized Photoactivation of "Caged" Compounds 233
 - 6.7.3 Imaging Electrical Activity in Deep Tissue 236
 - 6.7.4 Light Sheet Microscopy Using Two-Photon Excitation 237
 - 6.7.5 Other Applications of 2PM 238
 - 6.8 Other Nonlinear Microscopies 239
 - 6.9 Future Outlook for 2PM 240
 - 6.10 Summary 240
- Acknowledgment 241
- References 241

- 7 Light Sheet Microscopy 243**
Gopi Shah, Michael Weber, and Jan Huisken
 - 7.1 Principle of Light Sheet Microscopy 244
 - 7.2 Light Sheet Microscopy: Key Advantages 245
 - 7.3 Construction and Working of a Light Sheet Microscope 246
 - 7.4 Theory of Light Sheet Microscopy 247
 - 7.5 Light Sheet Interaction with Tissue 251
 - 7.6 3D Imaging 253
 - 7.7 Multiview Imaging 255
 - 7.8 Different Lens Configurations 257
 - 7.9 Sample Mounting 258
 - 7.10 Recent Advances in Light Sheet Microscopy 259
 - 7.11 Outlook 260
 - 7.11.1 Big Data 260
 - 7.11.2 Smart Microscope: Imaging Concept of the Future 261
 - 7.11.3 High-Throughput Imaging 261
 - 7.12 Summary 262
- References 262

8	Localization-Based Super-Resolution Microscopy	267
	<i>Markus Sauer and Mike Heilemann</i>	
8.1	Super-Resolution Microscopy: An Introduction	267
8.2	The Principle of Single-Molecule Localization Microscopy	269
8.3	Photoactivatable and Photoconvertible Probes	272
8.4	Intrinsically Photoswitchable Probes	272
8.5	Photoswitching of Organic Fluorophores by Chemical Reactions	273
8.6	Experimental Setup for Localization Microscopy	273
8.7	Optical Resolution and Imaging Artifacts	276
8.8	Fluorescence Labeling for Super-Resolution Microscopy	278
8.8.1	Label Size versus Structural Resolution	278
8.8.2	Live-Cell Labeling	280
8.8.3	Click Chemistry	280
8.8.4	Three-Dimensional SMLM	281
8.8.5	Astigmatic Imaging	281
8.8.6	Biplane Imaging	282
8.8.7	Double Helix PSF	282
8.8.8	Interferometric Imaging	282
8.9	Measures for Improving Imaging Contrast	283
8.10	SMLM Software	283
8.11	Reference Structures for SMLM	285
8.12	Quantification of SMLM Data	286
8.13	Summary	287
	References	287
9	Super-Resolution Microscopy: Interference and Pattern Techniques	291
	<i>Udo Birk, Gerrit Best, Roman Amberger, and Christoph Cremer</i>	
9.1	Introduction	291
9.1.1	Review: The Resolution Limit	292
9.2	Structured Illumination Microscopy (SIM)	293
9.2.1	Image Generation in Structured Illumination Microscopy	295
9.2.2	Extracting the High-Resolution Information	298
9.2.3	Optical Sectioning by SIM	299
9.2.4	How the Illumination Pattern is Generated?	301
9.2.5	Mathematical Derivation of the Interference Pattern	302
9.2.6	Examples for SIM Setups	304
9.3	Spatially Modulated Illumination (SMI) Microscopy	307
9.3.1	Overview	307
9.3.2	SMI Setup	309
9.3.3	Excitation Light Distribution	309
9.3.4	Object Size Estimation with SMI Microscopy	311
9.4	Application of Patterned Techniques	313
9.5	Conclusion	317
9.6	Summary	317
	Acknowledgments	317

10	STED Microscopy	321
	<i>Travis J. Gould, Lena K. Schroeder, Patrina A. Pellett, and Joerg Bewersdorf</i>	
10.1	Introduction	321
10.2	The Concepts behind STED Microscopy	322
10.2.1	Fundamental Concepts	322
10.2.1.1	Switching between Optical States	322
10.2.1.2	Stimulated Emission Depletion	322
10.2.1.3	Stimulated Emission Depletion Microscopy	324
10.2.2	Key Parameters in STED Microscopy	326
10.2.2.1	Pulsed Lasers and Fluorophore Kinetics	326
10.2.2.2	Wavelength Effects	328
10.2.2.3	PSF Shape and Quality	328
10.3	Experimental Setup	330
10.3.1	Light Sources and Synchronization	330
10.3.2	Scanning and Speed	331
10.3.3	Multicolor STED Imaging	332
10.3.4	Improving Axial Resolution in STED Microscopy	333
10.4	Applications	334
10.4.1	Choice of Fluorophore	334
10.4.2	Labeling Strategies	335
10.5	Summary	336
	References	337
11	Fluorescence Photobleaching Techniques	339

11.2.1	One Principle, Several Modes	340
11.2.2	Setting up an Instrument	343
11.2.3	Approaching Complexity from Bottom up	344
11.3	Fluorescence Recovery after Photobleaching (FRAP)	345
11.3.1	Evaluation of Diffusion Measurements	345
11.3.2	Binding	348
11.3.3	Membrane Transport	349
11.4	Continuous Fluorescence Microphotolysis (CFM)	352
11.4.1	Theoretical Background and Data Evaluation	352
11.4.2	Combination of CFM with Other Techniques	355
11.4.3	CFM Variants	355
11.5	CLSM-Assisted Photobleaching Methods	356
11.5.1	Implementation	356
11.5.2	New Opportunities	357
11.5.2.1	Multiple ROPs	357
11.5.2.2	Arbitrarily Shaped ROPs	359
11.5.2.3	Spatially Resolved Bleaching and Recovery	359
11.5.2.4	Millisecond Time Resolution	359
11.5.2.5	Three-Dimensional Photobleaching	359
11.5.3	Two Common Artifacts and Their Correction	360

11.6	Summary and Outlook	360
	References	361
12	Single-Molecule Microscopy in the Life Sciences	365
	<i>Markus Axmann, Josef Madl, and Gerhard J. Schütz</i>	
12.1	Encircling the Problem	365
12.2	What is the Unique Information?	367
12.2.1	Kinetics Can Be Directly Resolved	367
12.2.2	Full Probability Distributions Can Be Measured	367
12.2.3	Structures Can Be Related to Functional States	369
12.2.4	Structures Can Be Imaged at Super-Resolution	370
12.2.5	Bioanalysis Can Be Extended Down to the Single-Molecule Level	372
12.3	Building a Single-Molecule Microscope	372
12.3.1	Microscopes/Objectives	373
12.3.1.1	Dual View	373
12.3.1.2	Objective	374
12.3.2	Light Source	377
12.3.2.1	Uniformity	377
12.3.2.2	Intensity	378
12.3.2.3	Illumination Time	380
12.3.2.4	Polarization	380
12.3.2.5	Wavelength	381
12.3.2.6	Collimation	382
12.3.3	Detector	382
12.3.3.1	Pixel Size	382
12.3.3.2	CCD Cameras	384
12.3.3.3	Electron-Multiplying CCD Cameras	385
12.3.3.4	CMOS Detectors	386
12.4	Analyzing Single-Molecule Signals: Position, Orientation, Color, and Brightness	387
12.4.1	Localizing in Two Dimensions	388
12.4.2	Localizing along the Optical Axis	389
12.4.2.1	Analysis of the Shape of the Point Spread Function	389
12.4.2.2	Intensity Patterns along the Optical Axis	391
12.4.3	Brightness	392
12.4.4	Orientation	392
12.4.4.1	Polarization Microscopy	392
12.4.4.2	Defocused Imaging	393
12.4.5	Color	393
12.5	Learning from Single-Molecule Signals	394
12.5.1	Determination of Molecular Associations	394
12.5.2	Determination of Molecular Conformations via FRET	395
12.5.3	Single-Molecule Tracking	400
12.5.4	Detecting Transitions	401
