Preface *XI*

List of Contributors *XIII*

Part I Polycyclic Arenes *1*

1 Open-Shell Benzenoid Polycyclic Hydrocarbons *3*

Soumyajit Das and Jishan Wu

- 1.1 Introduction *3*
- 1.2 Higher Order Acenes *6*
- 1.3 Phenalenyl-Based Diradicaloids *9*
 - 1.3.1 Bis(phenalenyl)s *10*
 - 1.3.2 Zethrenes *14*
- 1.4 Anthenes and Periacenes *21*
- 1.5 π -Extended p-Quinodimethane *27*
- 1.6 Triangulene-Based Triplet Biradicals *31*
- 1.7 Potential Applications *32*
- 1.8 Conclusion *33*
- References *33*

2 Planar Cyclopenta-Fused Polycyclic Arenes *37*

Gabriel E. Rudebusch and Michael M. Haley

- 2.1 Introduction *37*
- 2.2 Acenaphthylenes *37*
- 2.3 Dibenzopentalenes *43*
- 2.4 Indenofluorenes *51*
- 2.5 Conclusions *57*
- Acknowledgment *58*
- References *58*

3 Growing Buckybowl Chemistry *61*

Shuhei Higashibayashi and Hidehiro Sakurai

- 3.1 Introduction *61*
- 3.2 π -Extended Buckybowls *62*

3.3	Chiral Buckybowl	65
3.4	Heterobuckybowl	68
3.5	Columnar Crystal Packing of Buckybowls	75
3.6	Summary and Conclusions	80
	References	80
4	Polycyclic Arenes Containing Seven-Membered Carbocycles	85
	<i>Kwan Yin Cheung and Qian Miao</i>	
4.1	Introduction	85
4.2	Azulene, Oligo-azulenes, and Fused Azulenes	85
4.3	Polycyclic Arenes Containing 5H-Dibenzo[a,d]cycloheptene Units	92
4.4	Cyclohepta[de]naphthalene, dicyclohepta[de,ij]naphthalene, and Their Benzannulated Derivatives	97
4.5	Curved Polycyclic Arenes Containing Highly Fused Cycloheptatriene	101
4.6	Conclusions	107
	Acknowledgment	107
	References	107
5	Polycyclic Arenes Containing Eight-Membered Carbocycles	111
	<i>Chun-Lin Deng, Xiao-Shui Peng, and Henry N. C. Wong</i>	
5.1	Introduction	111
5.2	[8]Annulenes	112
5.2.1	Dehydro[8]annulenes	112
5.2.2	Benzo-Fused [8]annulenes	116
5.2.3	Biphenylene-Fused [8]annulenes	119
5.3	Tetraphenylenes	122
5.3.1	Synthesis	122
5.3.1.1	Ring Opening of the Strained Four-Membered Ring of Biphenylene Derivatives	123
5.3.1.2	Transition-Metal-Mediated Oxidative Coupling	123
5.3.1.3	Cycloaddition–Deoxygenation Protocol	124
5.3.1.4	Synthesis of Enantiopure Tetraphenylenes	125
5.3.2	Properties and Potential Applications	127
5.4	[8]Circulene	133
5.5	Concluding Remarks	138
	References	138
6	Cycloparaphenylenes and Carbon Nanorings	143
	<i>Shigeru Yamago, Eiichi Kayahara, and Sigma Hashimoto</i>	
6.1	Introduction	143
6.2	Early Developments	144
6.3	Strain and HOMO/LUMO Energies of CPPs	146

6.4	Synthesis of CPPs	147
6.5	Properties of CPPs	154
6.5.1	Photophysical Properties	154
6.5.2	Redox Properties of CPPs	155
6.5.3	Host–Guest Chemistry	158
6.6	Summary and Conclusions	160
	References	160
7	Advances in Chemistry of Dehydrobenzoannulenes	163
	<i>Shunpei Nobusue and Yoshito Tobe</i>	
7.1	Introduction	163
7.2	Synthesis and Properties of New DBAs	164
7.2.1	Single-Ring DBAs	164
7.2.2	Multiple-Ring DBAs	166
7.3	DBAs as Graphyne and Graphdiyne Motifs	169
7.3.1	Theoretical and Synthetic Studies on Graphyne and Graphdiyne	170
7.3.2	Synthesis of Graphyne and Graphdiyne Motifs and Related Multiple DBA Systems	171
7.4	DBAs as Supramolecular Building Blocks	171
7.4.1	Crystal Engineering	172
7.4.2	3D Assemblies: Gels, Fibers, Vesicles, and Liquid Crystals	174
7.4.3	2D Self-Assembly on Surfaces and Interfaces	175
7.5	DBAs in Optoelectronic Applications	180
7.6	DBAs as Synthetic Precursors	181
7.6.1	Transannular Bond Formation Leading to Unconventional Aromatic Molecules	181
7.6.2	Strain-Assisted Cycloaddition and Biological Applications	185
7.7	Summary and Conclusions	187
	References	187
8	Tetraarylethenes and Aggregation-Induced Emission	193
	<i>Zujin Zhao and Ben Zhong Tang</i>	
8.1	Introduction	193
8.2	Fundamentals	194
8.2.1	Pristine Tetraphenylethene (TPE)	194
8.2.2	Rigidified TPE Derivatives	195
8.2.3	Adducts of TPE and Planar Chromophores	200
8.2.4	Emission Color Tuning of TPE Derivatives	202
8.2.5	Complex Tetraarylethenes	204
8.3	Applications	210
8.3.1	Chemosensors	210
8.3.2	Mechanochromic Luminescent Materials	211
8.3.3	Light-Emitting Materials	213

8.4	Outlook	218
	References	219

Part II Polycyclic Heteroarenes 223

9	N-Containing Polycyclic Heteroarenes	225
	<i>Arun Naibi Lakshminarayana and Chunyan Chi</i>	
9.1	Introduction	225
9.2	Linear and Extended N-Heteroarenes	226
9.2.1	N-Heteroarenes	226
9.2.1.1	History and Synthesis	226
9.2.1.2	Properties and Applications	228
9.2.2	Extended N-Heteroarenes	232
9.2.2.1	Unconventional N-Heteroarenes	232
9.2.2.2	N-Annulated Perylenes	235
9.3	Nitrogen-Rich Macrocyclic Arenes	236
9.3.1	Porphyrin and Porphyrinoids	236
9.3.1.1	Synthesis	237
9.3.1.2	General Properties	237
9.3.1.3	Diversity of Porphyrinoids	239
9.3.1.4	Applications	241
9.3.2	Phthalocyanines	242
9.3.2.1	History and Synthesis	242
9.3.2.2	General Properties and Applications	243
9.4	Miscellaneous	244
9.5	Summary and Conclusion	246
	References	247
10	Boron-Containing Polycyclic Aromatics	251
	<i>David R. Levine and John D. Tovar</i>	
10.1	Introduction	251
10.2	Historical Perspective and Representative Structures	251
10.3	General Synthetic Strategies	253
10.3.1	Metalation/Ring Closure	253
10.3.2	Element – Boron Exchange (Metathesis)	254
10.3.3	Intramolecular Cascade Cyclizations	255
10.3.4	Photoisomerization/Thermal Isomerization	256
10.3.5	Oxidative and Radical Cyclizations – Toward Two-Dimensional π -Systems	257
10.3.6	Functionalization at Boron: Hydroboration Chemistry	258
10.4	Recent Developments in B-PAH Structures and Properties	259
10.4.1	Linear Ladder-Type π -Systems	259
10.4.1.1	Borole-Based PAHs	259
10.4.1.2	Borepin-Based PAHs	261
10.4.1.3	Boraacenes and Their Congeners	262

10.4.1.4	Tetravalent Boron: B–N Coordinated and Other Zwitterionic Systems	265
10.4.2	Two-Dimensionally Fused π -Systems	267
10.4.2.1	Fundamental Impacts of Enforced Planarity in Triarylboranes	267
10.4.2.2	Fully Conjugated Two-Dimensional Materials	270
10.5	Conclusions/Outlook	272
	References	273
11	S-Containing Polycyclic Heteroarenes: Thiophene-Fused and Thiadiazole-Fused Arenes as Organic Semiconductors	277
	<i>Masashi Mamada and Yoshiro Yamashita</i>	
11.1	Introduction	277
11.2	Electronic Structures of Fused Thiophenes and Thiadiazoles	278
11.3	p-Type Semiconductors with Fused Thiophenes	282
11.3.1	Acenothiophenes (AcTs) and Acenodithiophenes (AcDTs)	282
11.3.1.1	Overview	282
11.3.1.2	AcT and AcDT Derivatives	284
11.3.1.3	AcT and AcDT Derivatives with Trialkylsilylethynyl Groups	284
11.3.2	[<i>n</i>]Thienoacenes ([<i>n</i>]TAcs) and Related Compounds	286
11.3.2.1	Overview	286
11.3.2.2	[<i>n</i>]TAc Derivatives	286
11.3.3	Alternating Rings of Fused Benzene and Thiophene Molecules (ABTs)	288
11.3.3.1	Overview	288
11.3.3.2	Isoelectronic Analogs of Dibenzo[<i>a,h</i>]anthracene	290
11.3.3.3	Isoelectronic Analogs of Pentaphene	290
11.3.3.4	Isoelectronic Analogs of Benzo[<i>a</i>]tetracene	290
11.3.4	Diacene-Fused Thienothiophenes (DAcTTs)	290
11.3.4.1	Overview	290
11.3.4.2	Symmetric DAcTTs	291
11.3.4.3	Asymmetric DAcTTs	291
11.3.5	Others (2-D π -Extended Fused Thiophenes)	293
11.3.5.1	Overview	293
11.3.5.2	2-D π -Extended Fused Thiophenes	293
11.4	n-Type Semiconductors with Fused Thiophenes	293
11.4.1	Overview	293
11.4.2	n-Type Semiconductors with Fused Thiophenes	295
11.5	Thiadiazole Derivatives	297
11.5.1	Overview	297
11.5.2	Thiadiazole Derivatives for p-Type Semiconductors	298
11.5.3	Thiadiazole Derivatives for Ambipolar Semiconductors	298
11.5.4	Thiadiazole Derivatives for n-Type Semiconductors	300
11.6	Summary and Conclusions	300
	References	303

12	P-Containing Heteroarenes: Synthesis, Properties, Applications	309
	<i>Monika Stolar and Thomas Baumgartner</i>	
12.1	Introduction	309
12.2	Five-Membered Ring Systems	309
12.3	Six-Membered Ring Systems	321
12.4	Seven-Membered Ring Systems	323
12.5	Other Phosphorus-Containing Diketo-Ring Systems	325
12.6	Summary and Conclusions	326
	Acknowledgments	327
	References	327
	Index	331
