	List of Contributors	<i>XVII</i>
	Foreword	<i>XXV</i>
	Preface	<i>XXVII</i>
1	Introduction	<i>1</i>
	<i>Damien Faivre</i>	
1.1	Iron Oxides: From Nature to Applications	<i>1</i>
1.2	A Very Brief Overview of the Iron Oxides and How They Found Names	<i>3</i>
	References	<i>5</i>
	Part I	Formation, Transformation <i>7</i>
2	Geological Occurrences and Relevance of Iron Oxides	<i>9</i>
	<i>France Lagroix, Subir K. Banerjee, and Mike J. Jackson</i>	
2.1	Introduction	<i>9</i>
2.2	Elemental Iron: From the Universe to the Earth	<i>9</i>
2.3	Residency of Elemental Iron on Earth	<i>10</i>
2.4	Mineral Forms of Iron Oxides	<i>11</i>
2.5	Occurrence and Geological Relevance of Iron Oxides	<i>13</i>
2.5.1	Crystallization from Melt and Partial Melts	<i>13</i>
2.5.2	Precipitation from Solution and Alteration/Transformation	<i>15</i>
2.6	Iron Oxides in Continental Dust Deposits	<i>19</i>
2.7	Concluding Remarks	<i>23</i>
	Acknowledgments	<i>23</i>
	References	<i>23</i>
3	Reductive Dissolution and Reactivity of Ferric (Hydr)oxides: New Insights and Implications for Environmental Redox Processes	<i>31</i>
	<i>Stefan Peiffer and Moli Wan</i>	
3.1	Introduction	<i>31</i>
3.2	The Classical Perspective on Reductive Dissolution	<i>32</i>

3.3	Electron Transfer at Ferric (Hydr)oxides Surfaces: The Role of Fe(II)	33
3.4	Energetics at the Ferric (Hydr)oxide Interface	35
3.4.1	Redox Potential of Fe(II) Sorbed to Ferric Hydroxides	35
3.4.2	The Semiconducting Properties of Ferric (Hydr)oxides	36
3.5	Rate Control: Surface versus Structural Properties	39
3.5.1	Electron Transfer versus Dissolution	39
3.5.2	Inter-mineral versus Intra-mineral Variability of Reactivity	40
3.6	Interaction between Dissolved Sulfide and Ferric Hydroxides	42
3.6.1	The Dynamic Nature of the Reaction	42
3.6.2	Product Mass Balance: The Occurrence of Excess Fe(II)	43
3.6.3	Pyrite Formation and Excess Fe(II)	46
3.7	Implications	47
	References	48
4	Formation and Transformation of Iron-Bearing Minerals by Iron(II)-Oxidizing and Iron(III)-Reducing Bacteria	53
	<i>Jennyfer Miot and Marjorie Etique</i>	
4.1	Introduction	53
4.2	Biom mineralization of Iron through Microbial Fe(II) Oxidation	54
4.2.1	Microbial Fe(II) Oxidation under Anoxic Conditions	55
4.2.1.1	Anoxygenic Photosynthesis	57
4.2.1.2	Nitrate-Dependent Ferrous Oxidation	58
4.2.2	Microbial Microaerobic Fe(II) Oxidation	58
4.2.3	Microbial Fe(II) Oxidation under Oxic Conditions	60
4.3	Iron(III) Minerals: Electron Acceptors for Iron-Reducing Bacteria	60
4.3.1	Transferring Electrons to Fe Oxides: A Microbial Challenge	60
4.3.2	Diversity of Fe Oxides Used and Produced by IRB	63
4.4	Specific Properties of Iron Biominerals	64
4.4.1	Microbial and Environmental Parameters Control Fe Mineralogy	65
4.4.2	The Organic Matter – Fe Oxide Interface	67
4.4.3	Could Fe Biominerals Constitute Biosignatures?	68
4.5	Microbial Fe Redox Cycling: Past, Present, and Future	72
4.5.1	Microbial Scenario for Past Deposition of Fe Oxides	72
4.5.2	Modern Environments Hosting Fe Cycling Bacteria	73
4.5.3	Impact of Fe Cycling Bacteria on Pollutant Speciation and Mobility	75
4.5.4	Technological Applications Based on Microbial Interactions with Iron Oxides	76
4.5.4.1	Bioremediation Strategies	76

4.5.4.2	Energy Production and Storage	76
4.6	Conclusion	77
	References	78
5	Controlled Biomineralization of Magnetite in Bacteria	99
	<i>Elodie C.T. Descamps, Jean-Baptiste Abbé, David Pignol, and Christopher T. Lefèvre</i>	
5.1	Introduction	99
5.2	Magnetotactic Bacteria	100
5.2.1	Discovery	100
5.2.2	Ecology	100
5.2.3	Diversity	101
5.3	Organization and Role of Magnetosomes	102
5.3.1	Arrangement of Magnetosomes within the Cells	102
5.3.2	Magneto-Aerotaxis	104
5.4	Biomineralization of Magnetosomes	104
5.4.1	Biochemistry of the Magnetosome Membrane	104
5.4.2	Genomics and Genetics of MTB	105
5.4.3	Magnetosome Formation	105
5.5	Mineral Phase of Magnetosomes	108
5.5.1	Composition	108
5.5.2	Size	109
5.5.3	Morphologies	109
5.5.4	Application of Magnetosomes	110
	Acknowledgments	111
	References	111
6	Ferritin Iron Mineralization and Storage: From Structure to Function	117
	<i>Noam Aronovitz, Michal Neeman, and Raz Zarivach</i>	
6.1	Introduction	117
6.2	Basic Structure of Ferritins	118
6.2.1	The Ferritin Subunit	118
6.2.2	The Ferritin Quaternary Assembly	120
6.2.2.1	The Twofold Axis	120
6.2.2.2	The Threefold Axis	120
6.2.2.3	The Fourfold Axis	121
6.2.2.4	The B-Channel	123
6.3	Iron Storage and Mineralization	123
6.3.1	Ferritin Ferroxidase Centers	123
6.3.2	The Nucleation Site	125
6.3.3	Iron Mineralization	125
6.4	NMR and MRI Studies of the Ferritin Iron Core	126
6.5	Magnetoferritin	127
6.5.1	Introduction to Magnetoferritin	127

6.5.2	Experimental Protocol for Magnetoferritin Synthesis	128
6.5.2.1	Product Description	129
6.5.3	Method Discussion	129
6.5.3.1	Crystallization	129
6.5.3.2	Putting Theory to Practice	130
6.5.4	Conclusion	130
6.6	Ferritin as a Biotechnological Tool	131
6.6.1	Biomedical Treatment and Diagnosis	131
6.6.2	Chemical Reaction Catalysis	132
6.6.3	Electronics	132
6.6.4	Conclusion	133
6.7	Protocol Annexes	133
6.7.1	Annex 1: Ferritin Purification	133
6.7.1.1	Purification of <i>Chlorobium tepidum</i> Ferritin Using Boiling as a Heat Resistance Selection Tool	133
6.7.1.2	Purification of Recombinant Soybean Seed Ferritin: Purification by His Tag Affinity	134
6.7.2	Annex 2: Magnetoferritin Preparation	135
	References	137
7	Iron Oxides in the Human Brain	143
	<i>Joanna F. Collingwood and Neil D. Telling</i>	
7.1	Introduction	143
7.2	Iron Oxides Observed in the Human Brain	146
7.2.1	Ferrihydrite	146
7.2.2	Hematite	146
7.2.3	Magnetite	147
7.2.4	Maghemite	148
7.2.5	Wüstite	148
7.2.6	Goethite	150
7.3	Properties of Iron Oxides in the Brain	150
7.3.1	Crystallographic and Structural Properties	150
7.3.2	Magnetic Properties	153
7.4	Stored and Sequestered Iron Oxide in the Human Brain	155
7.4.1	Ferritin	155
7.4.2	Mitochondrial Iron	156
7.4.3	Hemosiderin	158
7.4.4	Neuromelanin	159
7.5	Methods to Detect Iron Oxides in the Brain	160
7.5.1	Postmortem Analysis	160
7.5.2	Clinical Evaluation	162
7.6	Tools and Treatments: Manipulating Iron Oxides in the Brain	163
7.6.1	Imaging	164
7.6.2	Targeting	164
7.6.3	Therapeutic Use of Iron Oxide Nanoparticles	165

7.6.4	Therapeutic Removal of Iron	165
7.7	Concluding Remarks	166
	Acknowledgments	166
	References	166
8	The Chiton Radula: A Model System for Versatile Use of Iron Oxides	177
	<i>Derk Joester and Lesley R. Brooker</i>	
8.1	Functional Anatomy of the Mollusk Radula	177
8.2	Development of the Radula: Organic Matrix	180
8.3	The Discovery of Biominerals in the Radula	180
8.4	The Microarchitecture of Chiton Radula Teeth	181
8.5	Development of the Chiton Radula: Stages of Biomineralization	183
8.6	Development of the Radula: Biological Control	185
8.7	Role of Acidic Macromolecules in the Insoluble Organic Matrix	186
8.8	Soluble Organic Matrix Composition	186
8.9	Selective Deposition of Ferrihydrite in Stage II	187
8.10	Conversion of Ferrihydrite to Magnetite in Stage III	190
8.11	Phase Transformations in Stage IV	192
8.12	Final Functional Architecture	194
8.13	Concluding Remarks	197
	References	198
9	Mineralization of Goethite in Limpet Radular Teeth	207
	<i>Tina Ukmar-Godec</i>	
9.1	Introduction	207
9.2	Structure, Properties, and Function of the Limpet Radula	207
9.3	Goethite Produced in the Laboratory	210
9.4	Goethite Produced in Limpets	213
9.4.1	Morphology of Newly Formed Biogenic Goethite	213
9.4.2	Iron Transport into the Tooth	216
9.4.3	Nucleation and Growth of Biogenic Goethite	219
9.5	Conclusion	221
	References	222
