Preface *xi*

Acknowledgment *xiii*

Part I Materials and Processes for Printed Electronics *1*

1 Introduction *3*

- 1.1 Connected Smart World *3*
- 1.2 Smart Electronic Systems *4*
- 1.3 Overview of the Book *6*
- References *8*

2 Functional Electronic Inks *11*

- 2.1 Introduction *11*
 - 2.1.1 Printing Technologies *11*
 - 2.1.1.1 Screen Printing *11*
 - 2.1.1.2 Gravure Printing *12*
 - 2.1.1.3 Flexographic Printing *12*
 - 2.1.1.4 Offset Printing *13*
 - 2.1.1.5 Inkjet Printing *13*
 - 2.1.1.6 Aerosol Printing *15*
 - 2.1.2 Fluid Requirements for Inkjet Inks *15*
 - 2.1.2.1 Boiling Point *16*
 - 2.1.2.2 Surface Tension *16*
 - 2.1.2.3 Viscosity *16*
 - 2.1.2.4 Particle Size *17*
- 2.2 Conductive Inks *17*
 - 2.2.1 Metallic Nanoparticle Inks *17*
 - 2.2.2 Functionalized Multiwalled Carbon Nanotube (f-MWCNT) Inks *20*
 - 2.2.2.1 Introduction *20*
 - 2.2.2.2 MWCNT Ink Formulation *21*
 - 2.2.2.3 Resistance Characterization *23*
 - 2.2.3 MWCNT/Polyaniline Composite Inks *25*
 - 2.2.3.1 Introduction *25*

2.2.3.2	Composite Synthesis	26
2.2.3.3	Characterization of Water-dispersible MWCNT/PANI Composite	28
2.3	Semiconductor Inks	33
2.3.1	Organic Semiconductor Inks	33
2.3.2	Single-walled Carbon Nanotube (SWCNT) Inks	36
2.3.2.1	SWCNTs in Organic Solvents	37
2.3.2.2	SWCNTs in Water	38
2.3.2.3	SWCNT/Polymer Composite	39
2.3.3	SWCNT/Polymer Composites Inks	42
2.4	Summary	43
	References	43

Part II Printed Electronic Building Blocks 53

3	Printed Thin-film Transistors (TFTs) and Logic Circuits	55
3.1	Introduction	55
3.1.1	TFTs Versus Silicon MOSFETs	55
3.1.2	State-of-the-art TFT Technologies	56
3.1.3	New TFT Technologies	58
3.2	TFT Structure and Operation	60
3.2.1	TFT Architectures	60
3.2.2	Electrical Characteristics of TFTs	62
3.2.2.1	Carrier Mobility (μ)	62
3.2.2.2	On/Off Ratio (I_{on}/I_{off})	63
3.2.2.3	Threshold Voltage (V_t)	63
3.2.2.4	Sub-threshold Swing (SS)	64
3.3	Printed TFTs: an Overview	64
3.4	Carbon Nanotube (CNT)-network TFTs	71
3.4.1	Challenges in CNT-network TFTs	71
3.4.2	Percolation Transport in Nanotube Networks	73
3.4.3	Solution-process Fabrication of CNT-TFTs	75
3.4.4	Electrical Performance Enhancement in CNT-TFTs	76
3.4.4.1	Hysteresis Suppression	76
3.4.4.2	High μ and Large I_{on}/I_{off}	79
3.4.4.3	Uniformity and Scalability	81
3.4.4.4	Ambient and Operational Stabilities	81
3.5	Logic Circuits Based on CNT-TFTs	82
3.6	Summary	84
	References	85
4	Printed Passive Wireless Sensors	91
4.1	Introduction	91
4.2	Sensing Materials	92
4.2.1	Carbon Nanotube-based Sensors	92

4.2.2	Functionalized Multiwalled Carbon Nanotubes as Humidity Sensing Material	93
4.2.2.1	Humidity Sensing Properties	94
4.2.2.2	Humidity Sensing Mechanism	96
4.2.2.3	Mechanical Flexibility	98
4.3	Passive UHF Wireless Sensor	99
4.3.1	Flexible UHF Humidity Sensor Based on Carbon Nanotube	99
4.3.1.1	Sensor Operation Principle	99
4.3.1.2	Flexible Humidity Sensor Demonstration	100
4.3.2	Sensor Optimization: Influence of Resistor-electrode Structure	101
4.3.3	Analytical Model of Interdigital Electrode Capacitance	104
4.3.3.1	Interdigital Electrode and Interdigital Capacitance	104
4.3.3.2	Modified Analytical Models of IDCs	105
4.4	Passive UWB Wireless Sensor	108
4.4.1	Sensor Operation Principle	108
4.4.2	Theoretical Analysis and Data-processing Algorithm	109
4.4.2.1	Theoretical Analysis	109
4.4.2.2	Data-processing Algorithm	111
4.4.3	Sensor Prototype	112
4.4.4	Inkjet Printing of Coplanar Waveguide: Variable Ink-layer Thickness Approach	114
4.4.4.1	Introduction	114
4.4.4.2	Variable Ink-layer Thickness Approach	115
4.5	Summary	118
	References	119
5	Printed RFID Antennas	125
5.1	Introduction	125
5.1.1	Evolution of RFID-enabled Ubiquitous Sensing	126
5.2	Future Trends and Challenges	126
5.2.1	Design Challenges for RFID Tag Antennas	127
5.3	RFID Antennas: Narrow Band	127
5.3.1	Progressive Meander Line Antennas	127
5.3.1.1	Antennas Design Evolution and Geometry	128
5.3.1.2	Antenna Fabrication Parameters	131
5.3.1.3	Parametric Analysis	132
5.4	RFID Antennas: Wideband	133
5.4.1	Bowtie Antenna: Rounded Corners with T-matching	133
5.4.1.1	Antenna Dimensions and Parametric Optimization	133
5.4.1.2	Field and Circuit Concepts Parametric Analysis	134
5.4.2	Bowtie Antenna: Square Hole-matching Technique	137
5.4.2.1	Antenna Design Numerical Analysis and Optimization	138
5.4.2.2	Effective Aperture of Antenna	138
5.4.2.3	Results, Discussion, and Analysis	140
5.5	RFID Antennas: Sensor Enabled	143
5.5.1	Archimedean Spiral Antenna	143
5.5.1.1	Manufacturing Parametric Analysis	145

- 5.5.1.2 Parametric Analysis of Field and Circuit Concepts 147
- 5.5.2 RFID Antenna with Embedded Sensor and Calibration Functions 149
- 5.5.2.1 Antenna as a Sensor Design 150
- 5.6 Summary 152
- References 152

6 Printed Chipless RFID Tags 157

- 6.1 Introduction 157
- 6.1.1 RFID History 157
- 6.1.2 RFID System 158
- 6.1.3 RFID Advantages 161
- 6.1.4 RFID Applications 162
- 6.1.4.1 Logistics 162
- 6.1.4.2 Healthcare 163
- 6.1.4.3 Retail 163
- 6.1.4.4 Manufacturing 163
- 6.1.4.5 Transportation 163
- 6.1.4.6 Agriculture 163
- 6.1.5 RFID Challenges 164
- 6.2 Time-domain-based RFID Tags 166
- 6.3 Frequency-domain-based RFID Tags 171
- 6.4 Printing of Chipless RFID Tags 172
- 6.4.1 Printing of Time-domain RFID Tags 172
- 6.4.2 Printing of Frequency Domain Chipless RFID Tags 175
- 6.5 Summary 178
- 6.5.1 Large Coding Capacity 179
- 6.5.2 Compact Size 179
- 6.5.3 Configurability 179
- References 180

Part III System Integration for Printed Electronics 183

7 Heterogeneous Integration of Silicon and Printed Electronics 185

- 7.1 Introduction 185
- 7.2 Inkjet-printed Interconnections 186
- 7.2.1 Inkjet Printing Technology 186
- 7.2.2 Electrical Performance and Morphology 188
- 7.2.3 Reliability Evaluation in 85 °C/85% RH Ambient 191
- 7.3 Heterogeneous Integration 192
- 7.3.1 Introduction of Traditional Integration Approach 192
- 7.3.2 Heterogeneous Integration Process 194
- 7.3.3 Electrical Performance of Heterogeneous Interconnects 198
- 7.3.4 Bendability of Heterogeneous Interconnects 200
- 7.4 Summary 201
- References 201

8	Intelligent Packaging: Humidity Sensing System	205
8.1	Introduction	205
8.2	Plastic-based Humidity Sensor Box Prototype	207
8.2.1	Architecture of Humidity Sensor Box	207
8.2.2	f-MWCNT-based Resistive Humidity Sensor	208
8.2.3	System Integration	208
8.3	Paper-based Humidity Sensor Card Prototype	210
8.3.1	Fatigue of Interconnects versus Bending and Folding	211
8.3.1.1	Sample Fabrication and Experimental Setups	211
8.3.1.2	Fatigue Test Results and Discussion	212
8.3.2	Bendability of the Humidity Sensor	215
8.3.3	Demonstration of Humidity Sensor Cards	217
8.4	Summary	218
	References	218
9	Wearable Healthcare Device: Bio-Patch	221
9.1	Introduction	221
9.2	System Overview	222
9.2.1	Bio-signals	223
9.2.2	Customized Bio-sensing Chip	225
9.2.3	Inkjet-printed Electrodes	226
9.3	Paper-based Bio-Patch	230
9.4	Polyimide-based Multi-channel Bio-Patch	230
9.5	Polyimide-based Miniaturized Bio-Patch	234
9.6	Summary	239
	References	239
10	Life Cycle Assessment (LCA) for Printed Electronics	243
10.1	Introduction	243
10.2	Analysis Methodology	246
10.3	Environmental Footprint	252
10.4	Sustainable Production of Polymer- and Paper-based RFID Antennas	258
10.5	Summary	264
	References	265
	Index	269
