

# Table of Contents

<b>Preface</b>	<b>XV</b>		
<b>Introduction</b>	<b>XIX</b>		
<b>Part I Protein Analytics</b>	<b>1</b>		
<b>1 Protein Purification</b>	<b>3</b>		
1.1 Properties of Proteins	3	3.3 Catalysts	37
1.2 Protein Localization and Purification Strategy	6	3.4 Enzymes as Catalysts	37
1.3 Homogenization and Cell Disruption	7	3.5 Rate of Enzyme-Controlled Reactions	38
1.4 Precipitation	9	3.6 Michaelis–Menten Theory	38
1.5 Centrifugation	11	3.7 Determination of $K_m$ and $V_{max}$	39
1.5.1 Basic Principles	12	3.8 Inhibitors	40
1.5.2 Centrifugation Techniques	12	3.8.1 Competitive Inhibitors	40
1.6 Removal of Salts and Hydrophilic Contaminants	15	3.8.2 Non-competitive Inhibitors	41
1.7 Concentration	17	3.9 Test System Set-up	41
1.8 Detergents and their Removal	18	3.9.1 Analysis of the Physiological Function	42
1.8.1 Properties of Detergents	18	3.9.2 Selecting the Substrates	42
1.8.2 Removal of Detergents	20	3.9.3 Detection System	42
1.9 Sample Preparation for Proteome Analysis	22	3.9.4 Time Dependence	43
Further Reading	22	3.9.5 pH Value	43
		3.9.6 Selecting the Buffer Substance and the Ionic Strength	43
		3.9.7 Temperature	44
		3.9.8 Substrate Concentration	44
		3.9.9 Controls	45
		Further Reading	45
<b>2 Protein determination</b>	<b>23</b>	<b>4 Microcalorimetry</b>	<b>47</b>
2.1 Quantitative Determination by Staining Tests	25	4.1 Differential Scanning Calorimetry (DSC)	48
2.1.1 Biuret Assay	26	4.2 Isothermal Titration Calorimetry (ITC)	54
2.1.2 Lowry Assay	26	4.2.1 Ligand Binding to Proteins	54
2.1.3 Bicinchoninic Acid Assay (BCA Assay)	27	4.2.2 Binding of Molecules to Membranes: Insertion and Peripheral Binding	58
2.1.4 Bradford Assay	28	4.3 Pressure Perturbation Calorimetry (PPC)	61
2.2 Spectroscopic Methods	28	Further Reading	62
2.2.1 Measurements in the UV Range	29		
2.2.2 Fluorescence Method	31	<b>5 Immunological Techniques</b>	<b>63</b>
2.3 Radioactive Labeling of Peptides and Proteins	31	5.1 Antibodies	63
2.3.1 Iodinations	33	5.1.1 Antibodies and Immune Defense	63
Further Reading	33	5.1.2 Antibodies as Reagents	64
		5.1.3 Properties of Antibodies	64
		5.1.4 Functional Structure of IgG	66
		5.1.5 Antigen Interaction at the Combining Site	67
		5.1.6 Handling of Antibodies	68
		5.2 Antigens	69
<b>3 Enzyme Activity Testing</b>	<b>35</b>		
3.1 The Driving Force behind Chemical Reactions	35		
3.2 Rate of Chemical Reactions	36		

## VI Table of Contents

5.3	Antigen–Antibody Reaction	71	7.4.2	Molecular Vibrations	164
5.3.1	Immunoagglutination	72	7.4.3	Technical aspects of Infrared Spectroscopy	165
5.3.2	Immunoprecipitation	73	7.4.4	Infrared Spectra of Proteins	168
5.3.3	Immune Binding	84	7.5	Raman Spectroscopy	171
5.4	Complement Fixation	94	7.5.1	Basic Principles of Raman Spectroscopy	171
5.5	Methods in Cellular Immunology	95	7.5.2	Raman Experiments	172
5.6	Alteration of Biological Functions	97	7.5.3	Resonance Raman Spectroscopy	173
5.7	Production of Antibodies	98	7.6	Single Molecule Spectroscopy	174
5.7.1	Types of Antibodies	98	7.7	Methods using Polarized Light	175
5.7.2	New Antibody Techniques ( <i>Antibody Engineering</i> )	99	7.7.1	Linear Dichroism	175
5.7.3	Optimized Monoclonal Antibody Constructs with Effector Functions for Therapeutic Application	102	7.7.2	Optical Rotation Dispersion and Circular Dichroism	178
5.8	Outlook: Future Expansion of the Binding Concepts	106		Further Reading	180
	Dedication	106	<b>8</b>	<b>Light Microscopy Techniques – Imaging</b>	<b>181</b>
	Further Reading	106	8.1	Steps on the Road to Microscopy – from Simple Lenses to High Resolution Microscopes	181
<b>6</b>	<b>Chemical Modification of Proteins and Protein Complexes</b>	<b>107</b>	8.2	Modern Applications	182
6.1	Chemical Modification of Protein Functional Groups	108	8.3	Basic Physical Principles	183
6.2	Modification as a Means to Introduce Reporter Groups	116	8.4	Detection Methods	189
6.2.1	Investigation with Naturally Occurring Proteins	116	8.5	Sample Preparation	195
6.2.2	Investigation of Recombinant and Mutated Proteins	120	8.6	Special Fluorescence Microscopic Analysis	197
6.3	Protein Crosslinking for the Analysis of Protein Interaction	121		Further Reading	205
6.3.1	Bifunctional Reagents	121	<b>9</b>	<b>Cleavage of Proteins</b>	<b>207</b>
6.3.2	Photoaffinity Labeling	121	9.1	Proteolytic Enzymes	207
	Further Reading	129	9.2	Strategy	208
<b>7</b>	<b>Spectroscopy</b>	<b>131</b>	9.3	Denaturation of Proteins	209
7.1	Physical Principles and Measuring Techniques	132	9.4	Cleavage of Disulfide Bonds and Alkylation	209
7.1.1	Physical Principles of Optical Spectroscopic Techniques	132	9.5	Enzymatic Fragmentation	210
7.1.2	Interaction of Light with Matter	133	9.5.1	Proteases	210
7.1.3	Absorption Measurement and the Lambert–Beer Law	140	9.5.2	Conditions for Proteolysis	215
7.1.4	Photometer	143	9.6	Chemical Fragmentation	216
7.1.5	Time-Resolved Spectroscopy	144	9.7	Summary	217
7.2	UV/VIS/NIR Spectroscopy	146		Further Reading	218
7.2.1	Basic Principles	146	<b>10</b>	<b>Chromatographic Separation Methods</b>	<b>219</b>
7.2.2	Chromoproteins	147	10.1	Instrumentation	219
7.3	Fluorescence Spectroscopy	154	10.2	Fundamental Terms and Concepts in Chromatography	220
7.3.1	Basic Principles of Fluorescence Spectroscopy	154	10.3	Biophysical Properties of Peptides and Proteins	224
7.3.2	Fluorescence: Emission and Action Spectra	156	10.4	Chromatographic Separation Modes for Peptides and Proteins	225
7.3.3	Fluorescence Studies using Intrinsic and Extrinsic Probes	157	10.4.1	High-Performance Size Exclusion Chromatography	227
7.3.4	Green Fluorescent Protein (GFP) as a Unique Fluorescent Probe	158	10.4.2	High-Performance Reversed-Phase Chromatography (HP-RPC)	227
7.3.5	Quantum Dots as Fluorescence Labels	159	10.4.3	High-Performance Normal-Phase Chromatography (HP-NPC)	228
7.3.6	Special Fluorescence Techniques: FRAP, FLIM, FCS, TIRF	160	10.4.4	High-Performance Hydrophilic Interaction Chromatography (HP-HILIC)	229
7.3.7	Förster Resonance Energy Transfer (FRET)	160	10.4.5	High-Performance Aqueous Normal Phase Chromatography (HP-ANPC)	230
7.3.8	Frequent Mistakes in Fluorescence Spectroscopy: “The Seven Sins of Fluorescence Measurements”	161	10.4.6	High-Performance Hydrophobic Interaction Chromatography (HP-HIC)	230
7.4	Infrared Spectroscopy	163	10.4.7	High-Performance Ion Exchange Chromatography (HP-IEX)	232
7.4.1	Basic Principles of IR Spectroscopy	163	10.4.8	High-Performance Affinity Chromatography (HP-AC)	233

10.5	Method Development from Analytical to Preparative Scale Illustrated for HP-RPC	234	12.3.3	Joule Heating	279
10.5.1	Development of an Analytical Method	234	12.3.4	Detection Methods	279
10.5.2	Scaling up to Preparative Chromatography	236	12.4	Capillary Electrophoresis Methods	281
10.5.3	Fractionation	237	12.4.1	Capillary Zone Electrophoresis (CZE)	281
10.5.4	Analysis of Fractionations	238	12.4.2	Affinity Capillary Electrophoresis (ACE)	285
10.6	Multidimensional HPLC	238	12.4.3	Micellar Electrokinetic Chromatography (MEKC)	286
10.6.1	Purification of Peptides and Proteins by MD-HPLC Methods	238	12.4.4	Capillary Electrochromatography (CEC)	288
10.6.2	Fractionation of Complex Peptide and Protein Mixtures by MD-HPLC	239	12.4.5	Chiral Separations	289
10.6.3	Strategies for MD-HPLC Methods	239	12.4.6	Capillary Gel Electrophoresis (CGE)	290
10.6.4	Design of an Effective MD-HPLC Scheme	240	12.4.7	Capillary Isoelectric Focusing (CIEF)	291
10.7	Final Remarks	242	12.4.8	Isotachopheresis (ITP)	293
	Further Reading	242	12.5	Special Techniques	295
<b>11</b>	<b>Electrophoretic Techniques</b>	<b>243</b>	12.5.1	Sample Concentration	295
11.1	Historical Review	244	12.5.2	Online Sample Concentration	295
11.2	Theoretical Fundamentals	245	12.5.3	Fractionation	296
11.3	Equipment and Procedures of Gel Electrophoreses	248	12.5.4	Microchip Electrophoresis	297
11.3.1	Sample Preparation	249	12.6	Outlook	297
11.3.2	Gel Media for Electrophoresis	250		Further Reading	299
11.3.3	Detection and Quantification of the Separated Proteins	251	<b>13</b>	<b>Amino Acid Analysis</b>	<b>301</b>
11.3.4	Zone Electrophoresis	253	13.1	Sample Preparation	302
11.3.5	Porosity Gradient Gels	254	13.1.1	Acidic Hydrolysis	302
11.3.6	Buffer Systems	255	13.1.2	Alkaline Hydrolysis	303
11.3.7	Disc Electrophoresis	255	13.1.3	Enzymatic Hydrolysis	303
11.3.8	Acidic Native Electrophoresis	257	13.2	Free Amino Acids	303
11.3.9	SDS Polyacrylamide Gel Electrophoresis	257	13.3	Liquid Chromatography with Optical Detection Systems	303
11.3.10	Cationic Detergent Electrophoresis	258	13.3.1	Post-Column Derivatization	303
11.3.11	Blue Native Polyacrylamide Gel Electrophoresis	259	13.3.2	Pre-column Derivatization	305
11.3.12	Isoelectric Focusing	259	13.4	Amino Acid Analysis using Mass Spectrometry	309
11.4	Preparative Techniques	263	13.5	Summary	310
11.4.1	Electroelution from Gels	263		Further Reading	311
11.4.2	Preparative Zone Electrophoresis	264	<b>14</b>	<b>Protein Sequence Analysis</b>	<b>313</b>
11.4.3	Preparative Isoelectric Focusing	265	14.1	N-Terminal Sequence Analysis: The Edman Degradation	315
11.5	Free Flow Electrophoresis	266	14.1.1	Reactions of the Edman Degradation	315
11.6	High-Resolution Two-Dimensional Electrophoresis	267	14.1.2	Identification of the Amino Acids	316
11.6.1	Sample Preparation	268	14.1.3	Quality of Edman Degradation: the Repetitive Yield	317
11.6.2	Prefractionation	268	14.1.4	Instrumentation	319
11.6.3	First Dimension: IEF in IPG Strips	269	14.1.5	Problems of Amino Acid Sequence Analysis	322
11.6.4	Second Dimension: SDS Polyacrylamide Gel Electrophoresis	270	14.1.6	State of the Art	325
11.6.5	Detection and Identification of Proteins	270	14.2	C-Terminal Sequence Analysis	325
11.6.6	Difference Gel Electrophoresis (DIGE)	270	14.2.1	Chemical Degradation Methods	325
11.7	Electroblotting	272	14.2.2	Peptide Quantities and Quality of the Chemical Degradation	327
11.7.1	Blot Systems	272	14.2.3	Degradation of Polypeptides with Carboxypeptidases	327
11.7.2	Transfer Buffers	273		Further Reading	328
11.7.3	Blot Membranes	273	<b>15</b>	<b>Mass Spectrometry</b>	<b>329</b>
	Further Reading	273	15.1	Ionization Methods	330
<b>12</b>	<b>Capillary Electrophoresis</b>	<b>275</b>	15.1.1	Matrix Assisted Laser Desorption Ionization Mass Spectrometry (MALDI-MS)	330
12.1	Historical Overview	275	15.1.2	Electrospray Ionization (ESI)	335
12.2	Capillary Electrophoresis Setup	276	15.2	Mass Analyzer	341
12.3	Basic Principles of Capillary Electrophoresis	277	15.2.1	Time-of-Flight Analyzers (TOF)	343
12.3.1	Sample Injection	277			
12.3.2	The Engine: Electroosmotic Flow (EOF)	278			

VIII Table of Contents

15.2.2	Quadrupole Analyzer	345
15.2.3	Electric Ion Traps	348
15.2.4	Magnetic Ion Trap	349
15.2.5	Orbital Ion Trap	350
15.2.6	Hybrid Instruments	351
15.3	Ion Detectors	355
15.3.1	Secondary Electron Multiplier (SEV)	356
15.3.2	Faraday Cup	357
15.4	Fragmentation Techniques	357
15.4.1	Collision Induced Dissociation (CID)	357
15.4.2	Prompt and Metastable Decay (ISD, PSD)	358
15.4.3	Photon-Induced Dissociation (PID, IRMPD)	360
15.4.4	Generation of Free Radicals (ECD, HECD, ETD)	360
15.5	Mass Determination	362
15.5.1	Calculation of Mass	362
15.5.2	Influence of Isotopy	362
15.5.3	Calibration	365
15.5.4	Determination of the Number of Charges	365
15.5.5	Signal Processing and Analysis	366
15.5.6	Derivation of the Mass	366
15.5.7	Problems	366
15.6	Identification, Detection, and Structure Elucidation	368
15.6.1	Identification	368
15.6.2	Verification	369
15.6.3	Structure Elucidation	369
15.7	LC-MS and LC-MS/MS	375
15.7.1	LC-MS	375
15.7.2	LC-MS/MS	376
15.7.3	Ion Mobility Spectrometry (IMS)	378
15.8	Quantification	378
	Further Reading	379
<b>16</b>	<b>Protein–Protein Interactions</b>	<b>381</b>
16.1	The <i>Two-Hybrid</i> System	381
16.1.1	Principle of <i>Two-Hybrid</i> Systems	381
16.1.2	Elements of the <i>Two-Hybrid</i> System	382
16.1.3	Construction of Bait and Prey Proteins	382
16.1.4	Which Bait Proteins can be used in a Y2H Screen?	385
16.1.5	AD Fusion Proteins and cDNA Libraries	385
16.1.6	Carrying out a Y2H Screen	386
16.1.7	Other Modifications and Extensions of the <i>Two-Hybrid</i> -Technology	391
16.1.8	Biochemical and Functional Analysis of Interactions	393
16.2	TAP-Tagging and Purification of Protein Complexes	394
16.3	Analyzing Interactions <i>In Vitro</i> : GST- <i>Pulldown</i>	397
16.4	Co-immunoprecipitation	398
16.5	Far-Western	399
16.6	Surface Plasmon Resonance Spectroscopy	400
16.7	Fluorescence Resonance Energy Transfer (FRET)	402
16.7.1	Introduction	402
16.7.2	Key Physical Principles of FRET	403
16.7.3	Methods of FRET Measurements	403
16.7.4	Fluorescent Probes for FRET	406
16.7.5	Alternative Tools for Probing Protein–Protein Interactions: LINC and STET	408
16.8	Analytical Ultracentrifugation	409
16.8.1	Principles of Instrumentation	410
16.8.2	Basics of Centrifugation	411
16.8.3	Sedimentation Velocity Experiments	412
16.8.4	Sedimentation–Diffusion Equilibrium Experiments	415
	Further Reading	416
<b>17</b>	<b>Biosensors</b>	<b>419</b>
17.1	Dry Chemistry: Test Strips for Detecting and Monitoring Diabetes	420
17.2	Biosensors	420
17.2.1	Concept of Biosensors	420
17.2.2	Construction and Function of Biosensors	421
17.2.3	Cell Sensors	425
17.2.4	Immunosensors	426
17.3	Biomimetic Sensors	427
17.4	From Glucose Enzyme Electrodes to Electronic DNA Biochips	428
17.5	Resume: Biosensor or not Biosensor is no Longer the Question	429
	Further Reading	429
	<b>Part II 3D Structure Determination</b>	<b>431</b>
<b>18</b>	<b>Magnetic Resonance Spectroscopy of Biomolecules</b>	<b>433</b>
18.1	NMR Spectroscopy of Biomolecules	433
18.1.1	Theory of NMR Spectroscopy	434
18.1.2	One-Dimensional NMR Spectroscopy	438
18.1.3	Two-Dimensional NMR Spectroscopy	443
18.1.4	Three-Dimensional NMR Spectroscopy	449
18.1.5	Resonance Assignment	452
18.1.6	Protein Structure Determination	457
18.1.7	Protein Structures and more — an Overview	462
18.2	EPR Spectroscopy of Biological Systems	466
18.2.1	Basics of EPR Spectroscopy	467
18.2.2	<i>cw</i> -EPR Spectroscopy	468
18.2.3	<i>g</i> -Value	469
18.2.4	Electron Spin Nuclear Spin Coupling (Hyperfine Coupling)	469
18.2.5	<i>g</i> and Hyperfine Anisotropy	470
18.2.6	Electron Spin–Electron Spin Coupling	472
18.2.7	Pulsed EPR Experiments	473
18.2.8	Further Examples of EPR Applications	479
18.2.9	General Remarks on the Significance of EPR Spectra	481
18.2.10	Comparison EPR/NMR	481
	Acknowledgements	482
	Further Reading	482
<b>19</b>	<b>Electron Microscopy</b>	<b>485</b>
19.1	Transmission Electron Microscopy – Instrumentation	487
19.2	Approaches to Preparation	488
19.2.1	Native Samples in Ice	488
19.2.2	Negative Staining	490

19.2.3	Metal Coating by Evaporation	491
19.2.4	Labeling of Proteins	492
19.3	Imaging Process in the Electron Microscope	492
19.3.1	Resolution of a Transmission Electron Microscope	492
19.3.2	Interactions of the Electron Beam with the Object	493
19.3.3	Phase Contrast in Transmission Electron Microscopy	495
19.3.4	Electron Microscopy with a Phase Plate	495
19.3.5	Imaging Procedure for Frozen-Hydrated Specimens	496
19.3.6	Recording Images – Cameras and the Impact of Electrons	497
19.4	Image Analysis and Processing of Electron Micrographs	498
19.4.1	Pixel Size	498
19.4.2	Fourier Transformation	499
19.4.3	Analysis of the Contrast Transfer Function and Object Features	501
19.4.4	Improving the Signal-to-Noise Ratio	504
19.4.5	Principal Component Analysis and Classification	506
19.5	Three-Dimensional Electron Microscopy	508
19.5.1	Three-Dimensional Reconstruction of Single Particles	509
19.5.2	Three-Dimensional Reconstruction of Regularly Arrayed Macromolecular Complexes	511
19.5.3	Electron Tomography of Individual Objects	512
19.6	Analysis of Complex 3D Data Sets	514
19.6.1	Hybrid Approach: Combination of EM and X-Ray Data	514
19.6.2	Segmenting Tomograms and Visualization	515
19.6.3	Identifying Protein Complexes in Cellular Tomograms	515
19.7	Perspectives of Electron Microscopy	516
	Further Reading	517
<b>20</b>	<b>Atomic Force Microscopy</b>	<b>519</b>
20.1	Introduction	519
20.2	Principle of the Atomic Force Microscope	520
20.3	Interaction between Tip and Sample	521
20.4	Preparation Procedures	522
20.5	Mapping Biological Macromolecules	522
20.6	Force Spectroscopy of Single Molecules	524
20.7	Detection of Functional States and Interactions of Individual Proteins	526
	Further Reading	527
<b>21</b>	<b>X-Ray Structure Analysis</b>	<b>529</b>
21.1	X-Ray Crystallography	530
21.1.1	Crystallization	531
21.1.2	Crystals and X-Ray Diffraction	533
21.1.3	The Phase Problem	538
21.1.4	Model Building and Structure Refinement	542
21.2	Small Angle X-Ray Scattering (SAXS)	543
21.2.1	Machine Setup	544
21.2.2	Theory	545
21.2.3	Data Analysis	547
21.3	X-Ray Free Electron LASER (XFEL)	549
21.3.1	Machine Setup and Theory	549
	Acknowledgement	550
	Further Reading	551
<b>Part III Peptides, Carbohydrates, and Lipids 553</b>		
<b>22</b>	<b>Analytcs of Synthetic Peptides</b>	<b>555</b>
22.1	Concept of Peptide Synthesis	555
22.2	Purity of Synthetic Peptides	560
22.3	Characterization and Identity of Synthetic Peptides	562
22.4	Characterization of the Structure of Synthetic Peptides	564
22.5	Analytcs of Peptide Libraries	567
	Further Reading	569
<b>23</b>	<b>Carbohydrate Analysis</b>	<b>571</b>
23.1	General Stereochemical Basics	572
23.1.1	The Series of D-Sugars	572
23.1.2	Stereochemistry of D-Glucose	573
23.1.3	Important Monosaccharide Building Blocks	574
23.1.4	The Series of L-Sugars	574
23.1.5	The Glycosidic Bond	574
23.2	Protein Glycosylation	579
23.2.1	Structure of the N-Glycans	580
23.2.2	Structure of the O-Glycans	580
23.3	Analysis of Protein Glycosylation	581
23.3.1	Analysis on the Basis of the Intact Glycoprotein	582
23.3.2	Mass Spectrometric Analysis on the Basis of Glycopeptides	588
23.3.3	Release and Isolation of the N-Glycan Pool	590
23.3.4	Analysis of Individual N-Glycans	599
23.4	Genome, Proteome, Glycome	610
23.5	Final Considerations	611
	Further Reading	612
<b>24</b>	<b>Lipid Analysis</b>	<b>613</b>
24.1	Structure and Classification of Lipids	613
24.2	Extraction of Lipids from Biological Sources	615
24.2.1	Liquid Phase Extraction	616
24.2.2	Solid Phase Extraction	616
24.3	Methods for Lipid Analysis	618
24.3.1	Chromatographic Methods	618
24.3.2	Mass Spectrometry	622
24.3.3	Immunoassays	622
24.3.4	Further Methods in Lipid Analysis	623
24.3.5	Combining Different Analytical Systems	623
24.4	Analysis of Selected Lipid Classes	626
24.4.1	Whole Lipid Extracts	626
24.4.2	Fatty Acids	627
24.4.3	Nonpolar Neutral Lipids	628
24.4.4	Polar Ester Lipids	630

24.4.5	Lipid Hormones and Intracellular Signaling Molecules	633	26.6	Isolation of RNA	676
24.5	Lipid Vitamins	638	26.6.1	Isolation of Cytoplasmic RNA	677
24.6	Lipidome Analysis	640	26.6.2	Isolation of Poly(A) RNA	678
24.7	Perspectives	642	26.6.3	Isolation of Small RNA	679
	Further Reading	644	26.7	Isolation of Nucleic Acids using Magnetic Particles	679
			26.8	Lab-on-a-chip	680
				Further Reading	680
<b>25</b>	<b>Analysis of Post-translational Modifications: Phosphorylation and Acetylation of Proteins</b>	<b>645</b>	<b>27</b>	<b>Analysis of Nucleic Acids</b>	<b>681</b>
25.1	Functional Relevance of Phosphorylation and Acetylation	645	27.1	Restriction Analysis	681
25.1.1	Phosphorylation	645	27.1.1	Principle of Restriction Analyses	681
25.1.2	Acetylation	646	27.1.2	Historical Overview	682
25.2	Strategies for the Analysis of Phosphorylated and Acetylated Proteins and Peptides	647	27.1.3	Restriction Enzymes	682
25.3	Separation and Enrichment of Phosphorylated and Acetylated Proteins and Peptides	649	27.1.4	<i>In Vitro</i> Restriction and Applications	685
25.4	Detection of Phosphorylated and Acetylated Proteins and Peptides	651	27.2	Electrophoresis	690
25.4.1	Detection by Enzymatic, Radioactive, Immunochemical, and Fluorescence Based Methods	651	27.2.1	Gel Electrophoresis of DNA	691
