Preface *xxi*
Acknowledgments *xxv*

Part I General Aspects of Thermal Process Safety *1*

1 Introduction to Risk Analysis of Fine Chemical Processes *3*
1.1 Chemical Industry and Safety *4*
1.1.1 Chemical Industry and Society *4*
1.1.1.1 Product Safety *4*
1.1.1.2 Process Safety *5*
1.1.1.3 Accidents and Risk Perception in Chemical Industry *5*
1.1.2 Responsibility *6*
1.1.3 Definitions and Concepts *7*
1.1.3.1 Hazard *7*
1.1.3.2 Risk *7*
1.1.3.3 Safety *8*
1.1.3.4 Security *8*
1.1.3.5 Accepted Risk *8*
1.2 Steps of Risk Analysis *8*
1.2.1 Scope of Analysis *9*
1.2.2 Safety Data Collection *10*
1.2.3 Safe Conditions and Critical Limits *10*
1.2.4 Identification of Deviations *10*
1.2.5 Risk Assessment *11*
1.2.6 Risk Matrixes *14*
1.2.7 Risk-Reducing Measures *15*
1.2.8 Residual Risk *17*
1.3 Safety Data *17*
1.3.1 Physical Properties *18*
1.3.2 Chemical Properties *18*
1.3.3 Toxicity *18*
1.3.4 Ecotoxicity *20*

1.3.5 Fire and Explosion Data *20*
1.3.6 Interactions *21*
1.4 Systematic Identification of Hazards *21*
1.4.1 Checklist Method *22*
1.4.2 Failure Mode and Effect Analysis *24*
1.4.3 Hazard and Operability Study *24*
1.4.4 Decision Table *26*
1.4.5 Event Tree Analysis *26*
1.4.6 Fault Tree Analysis *27*
1.4.7 Brainstorming *29*
1.5 The Practice of Risk Analysis *29*
1.5.1 Preparing the Risk Analysis *29*
1.5.2 The Risk Analysis Team *30*
1.5.3 The Team Leader *30*
1.5.4 Finalizing the Risk Analysis *31*
1.6 Exercises *31*
References *32*

2 Fundamentals of Thermal Process Safety *35*
2.1 Energy Potential *37*
2.1.1 Thermal Energy *37*
2.1.1.1 Heat of Reaction *37*
2.1.1.2 Heat of Decomposition *38*
2.1.1.3 Heat Capacity *39*
2.1.1.4 Adiabatic Temperature Rise *40*
2.1.2 Pressure Effects *41*
2.2 Effect of Temperature on Reaction Rate *41*
2.2.1 Single Reaction *41*
2.2.2 Multiple Reactions *42*
2.3 Heat Balance *43*
2.3.1 Terms of the Heat Balance *43*
2.3.1.1 Heat Production *43*
2.3.1.2 Heat Removal *44*
2.3.1.3 Heat Accumulation *46*
2.3.1.4 Convective Heat Exchange Due to Mass Flow *46*
2.3.1.5 Sensible Heat Due to Feed *47*
2.3.1.6 Stirrer *47*
2.3.1.7 Heat Losses *47*
2.3.2 Simplified Expression of the Heat Balance *48*
2.3.3 Reaction Rate Under Adiabatic Conditions *49*
2.4 Runaway Reactions *50*
2.4.1 Thermal Explosions *50*
2.4.2 Semenov Diagram *51*
2.4.3 Parametric Sensitivity *52*
2.4.4 Critical Temperature *53*
2.4.5 Sensitivity Toward Variation of the Coolant Temperature *55*
2.4.6 Time Frame of a Thermal Explosion, the tmr_{ad} Concept *56*

2.5 Exercises *57*
References *59*

3 Assessment of Thermal Risks *61*
3.1 Thermal Process Safety *62*
3.1.1 Thermal Risks *62*
3.1.2 Processes Concerned by Thermal Risks *62*
3.2 Thermal Risk Assessment Criteria *63*
3.2.1 Cooling Failure Scenario *63*
3.2.2 Severity *66*
3.2.3 Probability *68*
3.2.4 Runaway Risk Assessment *70*
3.3 Criticality of Chemical Processes *70*
3.3.1 Assessment of the Criticality *70*
3.3.2 Criticality Classes *72*
3.3.2.1 Criticality Class 1 *72*
3.3.2.2 Criticality Class 2 *72*
3.3.2.3 Criticality Class 3 *73*
3.3.2.4 Criticality Class 4 *73*
3.3.2.5 Criticality Class 5 *73*
3.3.3 Special Cases of Criticality Assessment *76*
3.3.4 Remarks on Criticality Class 5 *76*
3.3.5 Using *MTT* as a Safety Barrier *77*
3.4 Assessment Procedures *81*
3.4.1 General Rules for Thermal Safety Assessment *81*
3.4.2 Practical Procedure for the Assessment of Thermal Risks *81*
3.5 Exercises *85*
References *87*

4 Experimental Techniques *89*
4.1 Calorimetric Measurement Principles *90*
4.1.1 Classification of Calorimeters *90*
4.1.2 Temperature Control Modes of Calorimeters *90*
4.1.2.1 Isothermal Mode *91*
4.1.2.2 Dynamic Mode *91*
4.1.2.3 Adiabatic *91*
4.1.2.4 Isoperibolic *92*
4.1.3 Heat Balance in Calorimeters *92*
4.1.3.1 Ideal Accumulation *93*
4.1.3.2 Ideal Heat Flow *93*
4.1.3.3 Isoperibolic Methods *94*
4.2 Instruments Used in Safety Laboratories *94*
4.2.1 Characteristics of Instruments Used for Safety Studies *94*
4.2.1.1 Sample Mass *94*
4.2.1.2 Sensitivity *96*
4.2.1.3 Construction of the Calorimeter *96*
4.2.1.4 Calorimetric Cells for Safety Studies *96*

4.2.2 Example of Instruments Used for Safety Studies *97*
4.3 Microcalorimeters *97*
4.3.1 Differential Scanning Calorimetry (DSC) *97*
4.3.1.1 Principles of DSC *98*
4.3.1.2 DSC and Safety Studies *98*
4.3.1.3 DSC Crucibles *99*
4.3.1.4 Applications *100*
4.3.1.5 Sample Preparation *102*
4.3.1.6 The Baseline Problem *103*
4.3.2 Calvet Calorimeters *104*
4.3.2.1 Principle *104*
4.3.2.2 Applications *105*
4.3.3 Thermal Activity Monitor *106*
4.3.3.1 Principle *106*
4.3.3.2 Applications *107*
4.4 Reaction Calorimeters *107*
4.4.1 Purpose of Reaction Calorimeters *107*
4.4.2 Principles of Reaction Calorimeters *108*
4.4.2.1 Heat Flow Calorimeters *108*
4.4.2.2 Heat Balance Calorimeters *109*
4.4.2.3 Compensation Calorimeters *109*
4.4.2.4 The Baseline Problem *109*
4.4.3 Examples of Reaction Calorimeters *110*
4.4.3.1 RC1 by Mettler Toledo *110*
4.4.3.2 CPA 202 by ChemiSens *111*
4.4.3.3 Calo 2310 by Systag *111*
4.4.3.4 Small-Scale Reaction Calorimeters *111*
4.4.3.5 Reaction Calorimetry at Industrial Scale *111*
4.4.3.6 Reaction Calorimetry at Microscale *111*
4.4.4 Applications *113*
4.4.4.1 Thermal Data of Reactions *113*
4.4.4.2 Reaction Kinetics *114*
4.5 Adiabatic Calorimeters *114*
4.5.1 Principle of Adiabatic Calorimetry *114*
4.5.2 On the Thermal Inertia *115*
4.5.3 Dewar Calorimeters *116*
4.5.3.1 Measurement Principle *116*
4.5.3.2 Applications *117*
4.5.4 Accelerating Rate Calorimeter (ARC) *119*
4.5.4.1 Measurement Principle *119*
4.5.4.2 Applications *120*
4.5.5 Vent Sizing Package (VSP) *121*
4.6 Exercises *122*
References *126*

5 Assessment of the Energy Potential *131*
5.1 Thermal Energy *132*
5.1.1 Thermal Energy of Synthesis Reactions *132*

5.1.2 Energy Potential of Secondary Reactions *133*
5.1.2.1 Typical Energies of Decomposition *134*
5.1.2.2 Stoichiometry of Decomposition Reactions *134*
5.1.2.3 Estimation of Decomposition Energies *135*
5.1.2.4 Specific Problems Linked with Secondary Reactions *135*
5.1.3 Adiabatic Temperature Rise *136*
5.2 Pressure Effects *137*
5.2.1 Gas Release *137*
5.2.2 Vapor Pressure *138*
5.2.3 Amount of Solvent Evaporated *139*
5.3 Experimental Determination of Energy Potentials *140*
5.3.1 Experimental Techniques *140*
5.3.2 Choosing the Sample to be Analyzed *141*
5.3.2.1 Sample Purity *141*
5.3.2.2 Batch or Semi-Batch Process *142*
5.3.2.3 Intermediates *144*
5.3.3 Assessment of Process Deviations *144*
5.3.3.1 Effect of Charging Errors *144*
5.3.3.2 Effect of Solvents on Thermal Stability *146*
5.3.3.3 Catalytic Effects of Impurities *146*
5.4 Exercises *147*
References *149*

Part II Mastering Exothermal Reactions *153*

6 General Aspects of Reactor Safety *155*
6.1 Dynamic Stability of Reactors *157*
6.1.1 Parametric Sensitivity *157*
6.1.2 Sensitivity Toward Temperature: Reaction Number *B* *157*
6.1.3 Heat Balance *158*
6.1.3.1 The Semenov Criterion *159*
6.1.3.2 Stability Diagrams *159*
6.1.3.3 Heat Release Rate and Cooling Rate *159*
6.1.3.4 Using Dimensionless Criteria *160*
6.1.3.5 Chaos Theory and Lyapunov Exponents *162*
6.1.3.6 Topological Tools *163*
6.2 Reactor Safety After a Cooling Failure *163*
6.2.1 Potential of the Reaction, the Adiabatic Temperature Rise *163*
6.2.2 Temperature in Case of Cooling Failure: The Concept of *MTSR* *164*
6.3 Example Reaction System *165*
References *168*

7 Batch Reactors *171*
7.1 Chemical Reaction Engineering Aspects of Batch Reactors *172*
7.1.1 Principles of Batch Reaction *172*
7.1.2 Mass Balance *173*
7.1.3 Heat Balance *174*

7.1.4 Strategies of Temperature Control *174*
7.2 Isothermal Reactions *175*
7.2.1 Principles *175*
7.2.2 Design of Safe Isothermal Reactors *175*
7.2.3 Safety Assessment *178*
7.3 Adiabatic Reaction *178*
7.3.1 Principles *178*
7.3.2 Design of a Safe Adiabatic Batch Reactor *178*
7.3.3 Safety Assessment *179*
7.4 Polytropic Reaction *179*
7.4.1 Principles *179*
7.4.2 Design of Polytropic Operation: Temperature Control *180*
7.4.3 Safety Assessment *184*
7.5 Isoperibolic Reaction *184*
7.5.1 Principles *184*
7.5.2 Design of Isoperibolic Operation: Temperature Control *184*
7.5.3 Safety Assessment *184*
7.6 Temperature-Controlled Reaction *185*
7.6.1 Principles *185*
7.6.2 Design of Temperature-Controlled Reaction *186*
7.6.3 Safety Assessment *187*
7.7 Key Factors for the Safe Design of Batch Reactors *188*
7.7.1 Determination of Safety Relevant Data *188*
7.7.2 Rules for Safe Operation of Batch Reactors *190*
7.8 Exercises *193*
References *195*

8 Semi-batch Reactors *197*
8.1 Principles of Semi-batch Reaction *198*
8.1.1 Definition of Semi-batch Operation *198*
8.1.2 Material Balance *199*
8.1.3 Heat Balance of Semi-batch Reactors *200*
8.1.3.1 Heat Production *200*
8.1.3.2 Thermal Effect of the Feed *201*
8.1.3.3 Heat Removal *201*
8.1.3.4 Heat Accumulation *201*
8.2 Reactant Accumulation in Semi-batch Reactors *202*
8.2.1 Fast Reactions *203*
8.2.2 Slow Reactions *205*
8.2.3 Design of Safe Semi-batch Reactors *207*
8.3 Isothermal Reaction *208*
8.3.1 Principles of Isothermal Semi-batch Operation *208*
8.3.2 Design of Isothermal Semi-batch Reactors *208*
8.3.3 Accumulation with Complex Reactions *212*
8.4 Isoperibolic, Constant Cooling Medium Temperature *212*
8.5 Non-isothermal Reaction *214*
8.6 Strategies of Feed Control *215*

8.6.1 Addition by Portions *215*
8.6.2 Constant Feed Rate *215*
8.6.3 Interlock of Feed with Temperature *217*
8.6.4 Why Reducing the Accumulation *219*
8.7 Choice of Temperature and Feed Rate *219*
8.7.1 General Principle *219*
8.7.2 Scale-Up from Laboratory to Industrial Scale *220*
8.7.3 Online Detection of Unwanted Accumulation *221*
8.8 Advanced Feed Control *222*
8.8.1 Feed Control by the Accumulation *222*
8.8.2 Feed Control by the Thermal Stability *224*
8.9 Exercises *226*
References *228*

9 Continuous Reactors *231*
9.1 Continuous Stirred Tank Reactors *232*
9.1.1 Mass Balance *233*
9.1.2 Heat Balance *233*
9.1.3 Cooled CSTR *234*
9.1.4 Adiabatic CSTR *234*
9.1.5 The Autothermal CSTR *236*
9.1.6 Safety Aspects *237*
9.1.6.1 Instabilities at Start-Up or Shutdown *237*
9.1.6.2 Behavior in Case of Cooling Failure *237*
9.2 Tubular Reactors *240*
9.2.1 Mass Balance *240*
9.2.2 Heat Balance *241*
9.2.3 Safety Aspects *242*
9.2.3.1 Parametric Sensitivity *242*
9.2.3.2 Heat Exchange Capacities of Tubular Reactors *243*
9.2.3.3 Passive Safety Aspects of Tubular Reactors *245*
9.2.4 Performance and Safety Characteristics of Ideal Reactors *246*
9.3 Other Continuous Reactor Types *247*
9.3.1 Cascade of CSTRs *248*
9.3.2 Recycling Reactor *248*
9.3.3 Microreactors *249*
9.3.4 Process Intensification *251*
9.4 Exercises *252*
References *253*

Part III Avoiding Secondary Reactions *255*

10 Thermal Stability *257*
10.1 Thermal Stability and Secondary Decomposition Reactions *258*
10.2 Triggering Conditions *260*
10.2.1 Onset: A Concept Without Scientific Base *260*

10.2.2 Decomposition Kinetics, the tmr_{ad} Concept *261*
10.2.3 Safe Temperature *262*
10.2.4 Assessment Procedure *262*
10.3 Estimation of Thermal Stability *264*
10.3.1 Estimation of T_{D24} from One Dynamic DSC Experiment *264*
10.3.2 Conservative Extrapolation *264*
10.3.3 Empirical Rules for the Determination of a "Safe" Temperature *267*
10.3.4 Prediction of Thermal Stability *268*
10.4 Quantitative Determination of the T_{D24} *269*
10.4.1 Principle of Quantitative Determination Methods for the Heat Release Rate *269*
10.4.2 Determination of $q' = f(T)$ from Isothermal Experiments *269*
10.4.3 Determination of $q' = f(T)$ from Dynamic Experiments *273*
10.4.4 Determination of T_{D24} *275*
10.5 Practice of Thermal Stability Assessment *276*
10.5.1 Complex Reactions *276*
10.5.2 Remarks on the Quality of Experiments and Evaluation *278*
10.6 Exercises *278*
References *281*

11 Autocatalytic Reactions *283*
11.1 Autocatalytic Decompositions *284*
11.1.1 Definitions *284*
11.1.1.1 Autocatalysis *284*
11.1.1.2 Induction Time *284*
11.1.2 Behavior of Autocatalytic Reactions *285*
11.1.3 Rate Equations of Autocatalytic Reactions *286*
11.1.3.1 The Prout–Tompkins Model *287*
11.1.3.2 The Benito–Perez Model *288*
11.1.3.3 The Berlin Model *288*
11.1.4 Phenomenological Aspects of Autocatalytic Reactions *289*
11.2 Identification of Autocatalytic Reactions *291*
11.2.1 Chemical Information *291*
11.2.2 Qualitative Peak Shape in a Dynamic DSC Thermogram *292*
11.2.3 Quantitative Peak Shape Characterization *293*
11.2.4 Double Scan Test *294*
11.2.5 Identification by Isothermal DSC *296*
11.3 Determination of tmr_{ad} of Autocatalytic Reactions *296*
11.3.1 One-Point Estimation *296*
11.3.2 Characterization Using Zero-Order Kinetics *297*
11.3.3 Characterization Using a Mechanistic Approach *299*
11.3.4 Characterization by Isoconversional Methods *301*
11.3.5 Characterization by Adiabatic Calorimetry *302*
11.4 Practical Safety Aspects for Autocatalytic Reactions *306*
11.4.1 Specific Safety Aspects of Autocatalytic Reactions *306*
11.4.2 Autocatalytic Decompositions in the Industrial Practice *307*
11.4.3 Volatile Products as Catalysts *307*

11.5 Exercises *308*
References *309*

12 Heat Accumulation *311*
12.1 Heat Accumulation Situations *312*
12.2 Heat Balance *313*
12.2.1 Heat Balance Using Time Scale *314*
12.2.2 Forced Convection, the Semenov Model *314*
12.2.3 Natural Convection *315*
12.2.4 High Viscosity Liquids, Pastes, and Solids *316*
12.3 Heat Balance with Reactive Material *318*
12.3.1 Conduction in a Reactive Solid with a Heat Source, the Frank-Kamenetskii Model *318*
12.3.2 Conduction in a Reactive Solid with Temperature Gradient at the Wall, the Thomas Model *323*
12.3.3 Conduction in a Reactive Solid with Formal Kinetics, the Finite Elements Model *324*
12.4 Assessing Heat Accumulation Conditions *325*
12.4.1 Thermal Explosion Models *325*
12.4.2 Assessment Procedure *326*
12.5 Exercises *332*
References *333*

13 Physical Unit Operations *335*
13.1 Thermal Hazards in Physical Unit Operations *336*
13.1.1 Introduction to Physical Unit Operations *336*
13.1.2 Hazards in Physical Unit Operations *337*
13.1.3 Assessment Procedure for Unwanted Exothermal Reactions *337*
13.1.4 Specificities of Physical Unit Operations *338*
13.1.5 Standardization of the Risk Assessment *338*
13.2 Specific Testing Procedures *338*
13.2.1 Shock Sensitivity: The Falling Hammer Test *339*
13.2.2 Friction Sensitivity *339*
13.2.3 DSC Dynamic *339*
13.2.4 Decomposition Gases *340*
13.2.5 Dynamic Decomposition Test (RADEX) *340*
13.2.6 Mini Autoclave *341*
13.2.7 Spontaneous Decomposition *341*
13.2.7.1 Deflagration Tube *341*
13.2.7.2 Test in Dewar *341*
13.2.8 Grewer Oven and Decomposition in Airstream *342*
13.2.9 RADEX Isoperibolic Test *342*
13.2.10 Self-Ignition Test in a 400 ml Basket *342*
13.2.11 Warm Storage Test in a Dewar *343*
13.3 Hazards Associated to Solid Processing *343*
13.3.1 Pneumatic and Mechanical Conveying Operations *343*
13.3.2 Blending *343*

13.3.3 Storage *344*
13.3.4 Drying *344*
13.3.4.1 Paddle Dryer *344*
13.3.4.2 Fluidized Bed *345*
13.3.5 Milling and Grinding *345*
13.3.6 Hot Discharge *346*
13.4 Hazards During Liquid Processing *346*
13.4.1 Transport Operations *346*
13.4.2 Operations with Heat Exchange *347*
13.4.3 Evaporation and Distillation *348*
13.4.3.1 Batch Distillation from a Stirred Tank *349*
13.4.3.2 Continuous Distillation *349*
13.4.4 Failure Modes of Heat Exchangers and Evaporators *350*
13.4.5 Risk Reducing Measures *352*
13.5 Transport of Dangerous Goods and SADT *353*
13.6 Exercises *354*

Part IV Technical Aspects of Thermal Process Safety *357*

14 Heating and Cooling Industrial Reactors *359*
14.1 Temperature Control of Industrial Reactors *361*
14.1.1 Technical Heat Carriers *361*
14.1.1.1 Steam Heating *361*
14.1.1.2 Hot Water Heating *362*
14.1.1.3 Other Heating Media *363*
14.1.1.4 Electrical Heating *363*
14.1.1.5 Cooling with Ice *363*
14.1.1.6 Other Heat Carriers for Cooling *363*
14.1.2 Heating and Cooling Techniques *364*
14.1.2.1 Direct Heating and Cooling *364*
14.1.2.2 Indirect Heating and Cooling *364*
14.1.2.3 Single Heat Carrier Circulation Systems *365*
14.1.2.4 Secondary Circulation Loop Temperature Control Systems *368*
14.1.3 Temperature Control Strategies *368*
14.1.3.1 Isoperibolic Temperature Control *368*
14.1.3.2 Isothermal Control *369*
14.1.3.3 Isothermal Control at Reflux *369*
14.1.3.4 Non-isothermal Temperature Control *370*
14.1.4 Dynamic Aspects of Heat Exchange Systems *371*
14.1.4.1 Thermal Time Constant *371*
14.1.4.2 Heating and Cooling Time *373*
14.1.4.3 Cascade Controller *374*
14.2 Heat Exchange Across the Wall *375*
14.2.1 Two Film Theory *375*
14.2.2 The Internal Film Coefficient of a Stirred Tank *376*

14.2.3 Determination of the Internal Film Coefficient *376*
14.2.4 The Resistance of the Equipment to Heat Transfer *378*
14.2.5 Practical Determination of Heat Transfer Coefficients *379*
14.3 Evaporative Cooling *382*
14.3.1 Amount of Solvent Evaporated *383*
14.3.2 Vapor Flow Rate *383*
14.3.3 Flooding of the Vapor Tube *384*
14.3.4 Swelling of the Reaction Mass *385*
14.3.5 Practical Procedure for the Assessment of Reactor Safety at the Boiling Point *386*
14.4 Dynamics of the Temperature Control System and Process Design *388*
14.4.1 Background *388*
14.4.2 Modeling the Dynamic Behavior of Industrial Reactors *389*
14.4.3 Experimental Simulation of Industrial Reactors *390*
14.5 Exercises *391*
References *395*

15 Risk Reducing Measures *397*
15.1 Strategies of Choice *399*
15.2 Eliminating Measures *400*
15.3 Technical Preventive Measures *401*
15.3.1 Control of Feed *401*
15.3.2 Emergency Cooling *402*
15.3.3 Quenching and Flooding *403*
15.3.4 Dumping *404*
15.3.5 Controlled Depressurization *405*
15.3.6 Alarm Systems *406*
15.3.7 Time Factor *407*
15.4 Emergency Measures *408*
15.4.1 Emergency Pressure Relief Systems *408*
15.4.2 Containment *408*
15.5 Design of Technical Measures *409*
15.5.1 Consequences of Runaway *409*
15.5.1.1 Temperature *409*
15.5.1.2 Pressure *409*
15.5.1.3 Release *409*
15.5.1.4 Closed Gassy Systems *410*
15.5.1.5 Closed Vapor Systems *410*
15.5.1.6 Open Gassy Systems *411*
15.5.1.7 Open Vapor Systems *411*
15.5.1.8 Extended Assessment Criteria for Severity *411*
15.5.2 Controllability *412*
15.5.2.1 Activity of the Main Reaction *412*
15.5.2.2 Activity of Secondary Reactions *413*
15.5.2.3 Gas Release Rate *414*
15.5.2.4 Vapor Release Rate *414*

15.5.2.5 Extended Assessment Criteria for the Controllability *415*
15.5.3 Assessment of Severity and Probability for the Different Criticality Classes *415*
15.5.3.1 Criticality Class 1 *416*
15.5.3.2 Criticality Class 2 *416*
15.5.3.3 Criticality Class 3 *416*
15.5.3.4 Criticality Class 4 *417*
15.5.3.5 Criticality Class 5 *418*
15.6 Exercises *423*

16 Emergency Pressure Relief *427*
16.1 General Remarks on Emergency Relief Systems *429*
16.1.1 Position of Emergency Relief Systems in a Protection Strategy *429*
16.1.2 Regulatory Aspects *429*
16.1.3 Protection Devices *430*
16.1.3.1 Bursting Disks *430*
16.1.3.2 Safety Valves *430*
16.1.3.3 Combined Systems *430*
16.1.3.4 Other Systems *431*
16.1.4 Sizing Methods *432*
16.2 Preliminary Steps of the Sizing Procedure: The Scenario *432*
16.2.1 Step 1: Definition of the Design Case *432*
16.2.2 Step 1: Quantifying the Relief Scenario *434*
16.2.2.1 Volume Displacement *434*
16.2.2.2 External Heating: Fire Cases *434*
16.2.2.3 External Heating: Maximum Heating *434*
16.2.2.4 Chemical Scenario Without Gas Release *435*
16.2.2.5 Chemical Scenario with Gas Release *435*
16.2.3 Step 2: Determination of the Flow Behavior *437*
16.3 Sizing Steps: Fluid Dynamics *439*
16.3.1 Step 3: Mass Flow Rate to Be Discharged *439*
16.3.1.1 Mass Flow Rate for Vapor Relief with One-Phase Flow *439*
16.3.1.2 Mass Flow Rate for Vapor Relief with Two-Phase Flow *440*
16.3.1.3 Mass Flow Rate for Gas Relief with One- or Two-Phase Flow *440*
16.3.1.4 Mass Flow Rate for Hybrid Systems with Two-Phase Flow *440*
16.3.2 Step 4: Dischargeable Mass Flux Through an Ideal Nozzle *441*
16.3.2.1 One-Phase Flow *441*
16.3.2.2 Two-Phase Flow *441*
16.3.3 Step 5 for Bursting Disk: Correction for Friction Losses *442*
16.3.4 Step 6 for Bursting Disk: Calculation of the Required Relief Area *444*
16.3.5 Step 5 for Safety Valve: Calculation of the Required Relief Area *444*
16.3.6 Step 6 for SV: Checking Function Stability *445*
16.3.6.1 Calculation of the Actual Mass Flow Rate in a Safety Valve *445*
16.3.6.2 Calculation of the Inlet Pressure Loss *445*
16.3.6.3 Calculation of Friction Losses Downstream a Safety Valve *446*
16.4 Sizing ERS for Multipurpose Reactors *446*

16.4.1 Principle of Sizing Procedure *446*
16.4.2 Choice of the Sizing Scenario *447*
16.4.3 Sensitivity Analysis of the Design Data *447*
16.4.4 Checking the Relief Capacity *449*
16.5 Effluent Treatment *450*
16.5.1 Initial Design Step *451*
16.5.2 Total Containment *451*
16.5.3 Passive Condenser *451*
16.5.4 Catch Tank, Gravity Separator *452*
16.5.5 Cyclone *452*
16.5.6 Quench Tank *452*
16.6 Exercises *452*
