

Index

a

- acetylacetone, 38, 139
- 2-acetylhexanone, 44, 63
- 4-acetyl-4'-(5-hexenyl-oxy)azobenzene, 259, 260
- acid-catalyzed tautomerization, 290
- β-alanine, 136
- alicyclic β-diketones, 17, 18
- alicyclic lactams, 14, 15
- allylic tautomerism, 21
- amide tautomerism, 107, 108
- amino acids, 135, 136
- 2-aminoazoles, 26, 27
- 4-amino-N-(4,6-dimethyl-2-pyrimidinyl)-benzenesulfonamide, 312
- aminophenols, 137, 138
- 6-amino-2-(phenylsulfonylimino)-1,2-dihydropyridine, 311
- annular tautomerism, 296, 297
- anthraquinone Schiff base, 235
- aromaticity, 2
- asymmetric heteroaromatic amidines, 100, 101
- aza-acenes, 220
- 7-azaindole, 135
- azapentalenes, 25–29
- azobenzenes
 - chromophore applications, 255
 - dyes, 234
 - photochromism, 254–256
 - azonaphthols, 286
 - azophenols
 - fast-responding artificial muscles, 266–268
 - optical oscillators, 262–265
 - photochromes, 256
 - thermal isomerization kinetics

– isotropic solvents, 256–258

- liquid-crystalline and glassy media, 259–262

b

- B97D/aug-cc-pVQZ single point energy calculations, 115
- barbituric acid (H3BA), 317–319
- benzazolo-oxazolidine derivatives, 175
- biological activity, 4, 5
- butyrolactam, 134

c

- chromogenic azobenzocrown ethers, 281
- cis-amides, 12, 13
- citrinin, 52
- conformational effects, 30, 32
- constitutional isomers, 113, 119
- controlled tautomerism
 - cavities, 279, 282
 - electron acceptor substituent, manipulation of, 275–277
 - metal-free naphthalocyanine, 274
 - proton cranes, 283–285
 - protonation/deprotonation and complexation, 274
 - tweezers, 278
- coumarin Schiff base, 235
- crystal engineering, aim of, 297
- C-type tautomerism, 95
- cyclohexane-1,2-dione, 23
- cyclohexane-1,3-dione, 139
- cytosine, 132

d

- 1-deazapurine, 305–307
- dehydrogenated tetraphenylporphyrin molecule, 155

- density functional theory (DFT) calculations
 – coupling constants, 66–68
 – energies, 62
 – isotope effects, 68–70
 – NMR chemical shifts, 63–65
 – nuclear shielding surface, 62, 63
 – vibrational frequencies, 70
- depolarization ratio (DR), 181
- 4-(diazenyl)phenol, 280
- diazophenylcalix[4]arene, 281
- N,N*-dihydrooctaazatetracenes, 223
- dihydro-5,7,12,14-tetraazapentacene, 220
- dihydrodiazatetracene, 221
- β -diketones, 37, 43, 44, 279
- 3,6-dimethyl-1,8-dihydroxy-
 2-acetylnaphthalene, 53
- 3,6-dimethyl-1,8-dihydroxy-
 2,7-diacetylnaphthalene, 53
- dimethylindanone, 85
- N,N'*-diphenyl-6-aminofulvene-1-aldimine,
 334
- N,N'*-diphenyl-1-amino-3-imino-propen,
 339
- double proton transfers, 339
- double proton-relay, 121, 122, 129, 134
- dynamic NMR (DNMR) studies, 6
- e**
- EFISHG, *see* electric field-induced second harmonic generation
- electric field-induced second harmonic generation (EFISHG), 179
- electrofuge, 329
- energy-dispersive X-ray diffraction, 57
- enol imine – enaminone tautomerism, 140
- enol–keto tautomerism, 277
- enolimine/ketoenamine prototropic tautomerism
 – benzoannelation, 230
 – *bis*-imines, 231
 – intramolecular hydrogen bonds, 231
 – ionochromic sensing
 – – anthraquinone Schiff base, 235
 – – aza-15-crown-5 containing
 4-(phenyldiazenyl)naphthalen-1-ol, 241
 – – azobenzene dyes, 234
 – – bidentate crown containing Schiff bases,
 241
 – – chelation-enhanced fluorescence
 quenching, 236
 – – CHEQ/ESIPT effects, 236
 – – coumarin Schiff base, 235
 – – coumarin-based imine, 236
 – – Crown ether containing Schiff base, 243
 – – dansyl cadaverine derivative, 238
 – – fluorogenic chemosensor, 240
 – – gossypol Schiff bases, 241
 – – “naked-eye” chemosensor effect, 242
 – – naphthalene Schiff base, 234
 – – PVC matrix inserted Schiff base, 238
 – – rhodamine-based chemodosimeter, 239, 240
 – – urea- and thiourea containing Schiff base, 236
 – *o*-hydroxybenzo[*b*]furan carbaldehydes, 232
 – salicylidene imines, 232
 – Schiff bases, 233
 – solid phase study, 229
 – technical applications, 229
- equilibrium constant, 118, 119
- N-(5-ethyl-1,3,4-thiadiazol-2-yl)-
 p-toluenesulfonylamide, 59
- exchange-correlation (XC) functionals, 183
- excited state intramolecular proton transfer (ESIPT) process, 3, 283
- excited state tautomerism
 – porphycene, 56, 57
 – porphyrine, 56, 58
- explicit solvent methods, 116
- f**
- PEP/MC simulations, 117, 126, 129, 131, 134, 136, 137, 139–142
- five-membered ring acylamidines, 31
- five-membered ring oxoheterocycles, 16
- functional tautomerism, 296, 297
- g**
- gas phase kinetic aspects, 5, 6
- gas phase tautomerism, 60
- gas phase thermodynamic aspects, 2–4
- h**
- 2,4,6-heptanetrione, 296
- 4-(5-hexenyl)azobenzene, 256
- 4-(5-hexenyl)-4'-hydroxyazobenzene, 259, 260
- heteroaromatic amidines, 109, 110
- Hine’s Principle of Least Motion, 12
- histamine, 131, 141
- histidine, 64, 131, 345
- host-guest molecular switches, 273
- HRS, *see* hyper-Rayleigh scattering
- human carbonic anhydrase II, 344, 346

hydrogen bonding, 330–332
 4-hydroxyquinoline, 289
 o-hydroxy acylaromatics, 49
 4-hydroxyazobenzene, 256
 o-hydroxyazo-hydrazo tautomerism, 41
 10-hydroxybenzo[*h*]quinoline, 289, 290
 5-hydroxyisoxazole, 128, 130
cis-2-hydroxy-5-methyl-azobenzene, 258
 7-hydroxy-8-(N-morpholinomethyl)quinoline, 283
 hydroxy-oxo tautomerism, 130, 132
 2-(4'-hydroxyphenylazo)benzoic acid, 288
 3-hydroxy pyrazole, 128
 3-hydroxy-4-pyridincarboxaldehyde and 4-R-anilines, 277
 4-hydroxyquinoline, 288
 7-hydroxyquinoline, 283
 o-hydroxy Schiff bases, 45, 55, 56, 69
 hydroxy-substituted azobenzenes, *see also* azophenols
 hyper-Rayleigh scattering (HRS), 176, 179

i

IEF-PCM geometry optimizations, 136, 137, 139–141
 imine–enamine system
 – carbon substituted, 105–107
 – nitrogen substituted, 102–104
 in-solution tautomeric equilibria
 – acetylacetone, 139
 – amino acids, 135, 136
 – aminophenols, 137, 138
 – 7-azaindole, 135
 – butyrolactam, 134
 – cytosine, 132
 – drug partitioning, 125–127
 – enol imine – enaminone tautomerism, 140
 – equilibrium constant, 118, 119
 – extended bifunctional muscarinic agonists, 124, 125
 – five-member heterocycles, 129, 130
 – guanine...cytosine pair, 129, 133
 – histamine, 131
 – histidine, 131
 – 5-hydroxyisoxazole, 128, 130
 – 3-hydroxy pyrazole, 128
 – malondialdehyde, 138
 – nitrosoalkane–oxime tautomerism, 140
 – 2-OH pyridine, 131
 – 4-OH pyridine, 131
 – phenol–quinone tautomerism, 140
 – relative solvation free energy, 116, 117
 – SBD process, 123
 – succinimide, 134

– sugars, 140
 – thymine, 133
 – uracil, 133
 – warfarin, 123
 inelastic electron tunneling process, 147, 151
 Infra red (IR) spectroscopy, 55, 71
 intermolecular tautomerizations
 – without requiring reorganization of environment
 – pre-equilibria absence, 338–340, 342
 intramolecular hydrogen-bonds (IMHB), 2, 3, 231, 278
 intramolecular tautomerizations
 – without requiring reorganization of environment, 334, 335, 338

k

keto–enol tautomerism, 120, 138, 139, 285
 keto–enol tautomerization, 290
 ketone tautomerism, 107, 108

l

light-triggered smart materials, 253, 268
 linear reduced fused oligo-1,4-pyrazines, *see also* pyrazinacenes
 liquid single crystal elastomers (LSCEs), 266–268
 liquid-crystalline elastomers (LCEs), 266
 liquid state tautomerism, 36
 lone pair effects, 29
 low-temperature STM, 155,
