

## Contents

### Preface *IX*

<b>1</b>	<b>Analytical Geochemistry</b>	<b>1</b>
1.1	Overview of Analytical Geochemistry	1
1.1.1	Major Element Geochemistry	1
1.1.1.1	X-ray Fluorescence Spectrometer	3
1.1.1.2	Loss on Ignition and Ferric/Ferrous Ratio of Iron	6
1.1.2	Trace Element Geochemistry	6
1.1.2.1	From REE Geochemistry to Trace Element Geochemistry	6
1.1.2.2	Isotope Dilution Method (ID)	12
1.1.2.3	Error Magnification	14
1.1.2.4	Isotope Dilution with Internal Standardization Method (ID-IS)	15
1.1.3	Determination of Mass Fractionation	17
1.1.4	Age Dating	19
1.1.4.1	Types of Radioactive Decay	20
1.1.4.2	Age Dating by Radioactive Isotopes	21
1.1.4.3	Extinct Nuclides	23
1.1.4.4	An Isochron or a Mixing Line?	24
1.1.4.5	A Single Zircon Dating	25
1.1.4.6	Direct Single Zircon Analysis by TIMS	26
1.1.5	Radiogenic Isotopes for Geochemical Tracers	29
1.2	Element Synthesis in Stars	30
1.2.1	Atom, Nucleus, Isotope, and Element	30
1.2.2	Soon after the Big Bang	30
1.2.3	Element Synthesis in Stars	31
1.2.4	Element Syntheses in Other Processes	33
1.2.4.1	The r-Process	33
1.2.4.2	The p-Process	33
1.2.4.3	The s-Process	34
1.2.4.4	The x-Process	34
1.2.4.5	Type Ia Supernova	35
1.2.5	Other Types of Supernovae	35
1.3	Errors	35

1.3.1	Average and Standard Deviation	36
1.3.2	Normal Population	37
1.3.3	Standard Error	37
1.3.4	ISO Suggestion	38
1.3.5	Modified Savitzky–Golay Method	38
1.3.6	Variance, Covariance, and Correlation Coefficient	38
1.3.7	Weighted Average, Variance, and Covariance	39
1.3.8	The Least-Squares Method	40
<b>2</b>	<b>Basics and Principles of Sample Digestion</b>	<b>41</b>
2.1	Clean Technologies, Powdering, and Weighing of Sample Powder	41
2.1.1	Clean Room Technologies	41
2.1.1.1	Clean Rooms	41
2.1.1.2	Two Types of Clean Rooms	41
2.1.1.3	Draft Chamber	42
2.1.1.4	Clean Evaporator	43
2.1.1.5	Protection to Acids	44
2.1.1.6	Levels of Cleanness	44
2.1.1.7	Clean Benches and so on	45
2.1.2	Powdering of the Sample	45
2.1.3	Weighing the Sample Powder	46
2.2	Materials Used in Laboratory	47
2.2.1	Glassware	47
2.2.2	Plastics	48
2.2.3	Water	49
2.2.4	Azeotrope	51
2.2.5	Physical and Chemical Properties of Acids	52
2.2.5.1	Hydrofluoric Acid	52
2.2.5.2	Hydrochloric Acid	54
2.2.5.3	Hydrobromic Acid	55
2.2.5.4	Nitric Acid	55
2.2.5.5	Perchloric Acid	55
2.2.6	Sub-Boiling Purification	56
2.2.7	Alkali Reagents	58
2.2.7.1	Ammonia Water	58
2.2.7.2	TMSC <sup>®</sup>	58
2.3	Characterization of Elements	58
2.3.1	Characterization of Elements by Their Behavior in HF Solution	58
2.3.2	Characterization of Elements by Melting Temperature of Oxides	60
2.3.3	Characterization of Elements by Volatility of Fluorides and Chlorides	62
2.4	Sample Digestion Techniques	64
2.4.1	HF+HClO <sub>4</sub> Digestion in Ambient Pressure (an “Ultrasonic Method”)	64

2.4.2	HF Digestion in High Pressure and Temperature (a “Bomb Method”) 66
2.4.3	Microwave Digestion Method 68
2.4.4	Carius Tube Digestion for Os Separation 69
2.4.5	HPA (High-Pressure Asher) Digestion Method 71
2.4.6	Fusion 71
2.4.6.1	Alkali Fusion 72
2.4.6.2	Lithium Borate Fusion 72
2.4.6.3	Sodium Peroxide Fusion 72
2.4.6.4	V <sub>2</sub> O <sub>5</sub> Fusion 74
2.4.6.5	NiS Fire Assay 76
2.4.7	A Digestion Method Using NH <sub>4</sub> F 76
2.5	Fluoride Formation in Silicate Digestion and Coprecipitation Issues 77
2.5.1	Formation of Fluorides in Basalt Digestion by HF–HNO <sub>3</sub> Digestion and Coprecipitation 77
2.5.2	Formation of AlF <sub>3</sub> in Rhyolite Decomposition by Bomb Digestion and Coprecipitation 78
2.5.3	Determination of Fluorophile/Oxophile Elements Avoiding Coprecipitation 82
2.5.4	Ti Addition Method 84
2.5.5	Summary of Element Determination Methods 84
2.5.6	Application of Lu–Hf Method to Ca-Rich and Al-Rich Samples 88
2.5.6.1	Ca-Rich Samples 88
2.5.6.2	Al-Rich Samples 89
2.5.7	Drawbacks of Al and Mg Addition Methods 90
<b>3</b>	<b>Basics and Principles of Chemical Separation 91</b>
3.1	Ion Exchange Chromatography 91
3.1.1	Cation and Anion Exchange Chromatography 91
3.1.2	Prewash of Ion Exchange Resins 93
3.1.3	Other Reagents and Purification 94
3.1.3.1	The HIBA Solution 94
3.1.3.2	DCTA and Pyridine 95
3.1.4	Eichrom® Resins (Liquid Exchange Chromatographic Resins) 95
3.1.5	Chelating Resin, Chelex 100® 98
3.1.6	Macroporous Resins 99
3.1.7	Ion Chromatography for Halogen Determination 99
3.1.8	Some Tips in the Column Chemistry (Reminder!) 102
<b>4</b>	<b>Mass Spectrometry 103</b>
4.1	Introduction 103
4.2	Vacuum Techniques 103
4.2.1	Basic Knowledge on Vacuum 104
4.2.1.1	Conversion Table of the Vacuum Unit 104

- 4.2.1.2 When You Touch Vacuum Equipment Such as Mass Spectrometers 104
- 4.2.1.3 Velocity of Air Molecules 105
- 4.2.2 Pirani Gauge 105
- 4.2.3 Penning Gauge 106
- 4.2.4 Ion Gauge 106
- 4.2.5 Rotary Pump 107
- 4.2.6 Oil Diffusion Pump 109
- 4.2.7 Turbo Molecular Pump 109
- 4.2.8 Ion Pump 111
- 4.2.9 Cold Trap (Cryopump) 112
- 4.3 Basics and Principles of an Ion Source 112
  - 4.3.1 Thermal Ionization (TI) Ion Source 113
  - 4.3.2 Inductively Coupled Plasma (ICP) Ion Source 117
  - 4.3.3 Ion Source by Sputtering Phenomenon (Secondary Ion Generation) 118
- 4.4 Basics and Principles of Mass Separators 119
  - 4.4.1 Principle of Mass Separation by Sector Magnetic Field 119
  - 4.4.2 Principle of Quadrupole (Q-Pole) Mass Filter 120
  - 4.4.3 Electrostatic Filter (Energy Filter) 121
- 4.5 Principles and Operation of Ion Detectors 122
  - 4.5.1 Faraday Cup 122
  - 4.5.2 The Daly Knob 125
  - 4.5.3 Photoelectron Multiplier 126
  - 4.5.4 Secondary Electron Multiplier and Ion Counting System 126
  - 4.5.5 Operation of SEM 128
  - 4.5.6 Multiple Channeltrons 129
- 4.6 Various Mass Spectrometers 130
  - 4.6.1 Thermal Ionization Mass Spectrometer 130
  - 4.6.2 Key Options of TIMS 133
    - 4.6.2.1 RPQ<sup>®</sup> System 133
    - 4.6.2.2 Focus Quad<sup>®</sup> and Dispersion Quad<sup>®</sup> 134
    - 4.6.2.3 Filament Degassing (Outgassing) Machine 134
  - 4.6.3 Q-Pole Type Inductively Coupled Plasma Mass Spectrometry (ICP-QMS) 135
  - 4.6.4 High-Resolution Sector-Type ICP-MS (ICP-SFMS or HR-ICP-SFMS) 136
  - 4.6.5 Multicollector ICP-MS (MC-ICP-MS) 137
  - 4.6.6 Secondary Ion Mass Spectrometer (SIMS) 141
  - 4.6.7 Multicollector High-Resolution SIMS (High Resolution-SIMS or HR-SIMS) 142
- Exercise 144
- 5 Techniques in TIMS 145**
  - 5.1 Data Evaluation in TIMS 145

5.1.1	Mass Resolution	145
5.1.2	Abundance Sensitivity	145
5.1.3	Theoretical Errors of Faraday Cups	145
5.1.4	Amplifiers' Time Lag or Amplifier's Time Constant ( $\tau$ )	147
5.1.5	Importance of Background	148
5.2	Data Acquisition and Calculation in TIMS	149
5.2.1	The Peak-Jumping Method	149
5.2.2	Mass Discrimination Correction	150
5.2.3	Dynamic Multicollection	151
5.2.4	Matrix Amplifier <sup>®</sup> and Amplifier Rotation <sup>®</sup>	152
5.2.5	Spike-Ratio Measurement	153
5.2.6	The Double-Spike Technique	156
5.2.7	Total Evaporation (TE) Method	158
5.2.8	V-Shaped Filament	159
5.2.9	Accurate Isotope Ratio Measurement of Two-Isotopic Element by TIMS	159
5.2.10	Running Cost of TIMS	160
5.2.11	Some Tips in TIMS	161
<b>6</b>	<b>Application of TIMS to Isotopic Ratio Analysis of Each Element</b>	<b>163</b>
6.1	Precise Isotopic Measurement of Li	165
6.1.1	Introduction	165
6.1.2	Separation of Li	165
6.1.3	Loading and TIMS of Li	165
6.1.4	Across-Arc Variation of Li Isotopes in Lavas from the Izu arc, Japan	167
6.1.5	MC-ICP-MS of Li	168
6.1.6	The Author's Monology	168
6.2	Precise Isotopic Measurement of B	168
6.2.1	Introduction	168
6.2.2	Suppression of B Volatilization in HF Solution, and Purification of B with Low Blanks	169
6.2.3	Separation of B from Silicate Samples	169
6.2.4	Measurement of B by P-TIMS	171
6.2.5	Development of Piggyback Faraday Cups for Static Multicollection of $\text{Cs}_2\text{BO}_2^+$ Ions for Precise B Isotope Analysis	171
6.2.6	Application of B Isotope Ratios to Mantle/Crust Recycling at the Izu Subduction Zone	172
6.2.7	MC-ICP-MS of B	173
6.2.8	The Author's Monology	173
6.3	Precise Isotopic Measurement of Mg	173
6.3.1	Introduction	173
6.3.2	Standard Reference Materials for Mg	174
6.3.3	Separation of Mg	174
6.3.4	Loading and TIMS of Mg	177

6.3.5	N-TIMS for Mg	177
6.3.6	MC-ICP-MS of Mg	177
6.4	Precise Isotopic Measurement of S	178
6.4.1	Introduction	178
6.4.2	Sample Digestion Using HPA for ID-TIMS	179
6.4.3	Reduction of S into H <sub>2</sub> S and Collection as As <sub>2</sub> S <sub>3</sub>	179
6.4.4	Loading and TIMS of S	180
6.4.5	MC-ICP-MS of S	181
6.4.6	The Author's Monology	181
6.5	Precise Isotopic Measurements of Cl and Br	182
6.5.1	Introduction	182
6.5.2	Chemical Separation and N-TIMS of Cl	183
6.5.3	Total-Evaporation (TE)-N-TIMS of Cl	184
6.5.4	Chemical Separation and P-TIMS of Cl	184
6.5.5	Theoretical Consideration on the Graphite Activator	185
6.5.6	The Author's Monology	186
6.6	Precise Isotopic Measurement of K	186
6.6.1	Introduction	186
6.6.2	Separation of K	186
6.6.3	Loading and TIMS of K	187
6.6.4	The Author's Monology	187
6.7	Precise Isotopic Measurement of Ca	188
6.7.1	Introduction	188
6.7.2	Separation of Ca for TIMS	189
6.7.3	Loading and TIMS of Ca	189
6.7.4	The Author's Monology	190
6.8	Precise Isotopic Measurement of Ti	190
6.8.1	Introduction	190
6.8.2	Separation of Ti	191
6.8.3	Loading and TIMS of Ti	194
6.8.4	MC-ICP-MS of Ti	195
6.8.5	The Author's Monology	195
6.9	Precise Isotopic Measurement of V	196
6.9.1	Introduction	196
6.9.2	Chemical Separation of V	196
6.9.3	Loading and TIMS of V	197
6.9.4	MC-ICP-MS of V	199
6.9.5	The Author's Monology	199
6.10	Ultraprecise Isotopic Measurement of Cr	199
6.10.1	Introduction	199
6.10.2	Column Chemistry for Separation of Cr	199
6.10.3	Loading and TIMS of Cr	200
6.10.4	The Author's Monology	201
6.11	Precise Isotopic Measurement of Fe	202
6.11.1	Introduction	202

6.11.2	Chemical Separation of Fe	202
6.11.3	Loading and P-TIMS of Fe	203
6.11.4	Loading and N-TIMS of Fe	204
6.11.5	MC-ICP-MS of Fe	204
6.11.6	The Author's Monology	204
6.12	Precise Isotopic Measurement of Ni	204
6.12.1	Introduction	204
6.12.2	Chemical Separation of Ni	205
6.12.3	Loading and TIMS of Ni	207
6.12.4	MC-ICP-MS of Ni	208
6.12.5	The Author's Monology	208
6.13	Precise Isotopic Measurement of Cu	209
6.13.1	Introduction	209
6.13.2	Chemical Separation of Cu	209
6.13.3	Loading and TIMS of Cu	210
6.13.4	MC-ICP-MS of Cu	211
6.13.5	The Author's Monology	211
6.14	Precise Isotopic Measurement of Zn	212
6.14.1	Introduction	212
6.14.2	Chemical Separation of Zn	212
6.14.3	Loading and TIMS of Zn	214
6.14.4	MC-ICP-MS of Zn	214
6.14.5	The Author's Monology	215
6.15	Purification Methods of Ga, In, and Tl	215
6.15.1	Introduction	215
6.15.2	Chemical Separation of Ga	215
6.15.3	Chemical Separation of In	216
6.15.4	Chemical Separation of Tl	217
6.16	Precise Isotopic Measurement of Ge	219
6.16.1	Introduction	219
6.16.2	Chemical Separation of Ge	219
6.16.3	Loading and TIMS of Ge	221
6.16.4	MC-ICP-MS of Ge	221
6.16.5	The Author's Monology	221
6.17	Precise Isotopic Measurement of Se	222
6.17.1	Introduction	222
6.17.2	Chemical Separation of Se	223
6.17.3	Loading and N-TIMS of Se	224
6.17.4	MC-ICP-MS of Se	225
6.17.5	The Author's Monology	226
6.18	Precise Isotopic Measurements for the $^{87}\text{Rb}$ – $^{87}\text{Sr}$ and $^{147}\text{Sm}$ – $^{143}\text{Nd}$ Isotope Systems	226
6.18.1	Introduction	226
6.18.2	Sequential Separation Method of Rb, Sr, Sm, and Nd	227
6.18.3	Sequential Separation of Large Amounts of Sr–Nd–Pb	229

6.18.4	Determination of 55 Elements and Sr, Nd, Hf, and Pb Isotope Ratios 229
6.18.5	Rb Determination by ID-TIMS 229
6.18.6	Spike-Ratio Measurement of Sr by TIMS 233
6.18.7	Sm Determination by ID-TIMS. 234
6.18.8	Spike-Ratio Measurement for Nd by TIMS 235
6.18.9	Measurements of $^{87}\text{Sr}/^{86}\text{Sr}$ and $^{143}\text{Nd}/^{144}\text{Nd}$ Ratios by MC-ICP-MS 235
6.19	Precise Isotopic Measurements of Zr 236
6.19.1	Introduction 236
6.19.2	Chemical Separation of Zr 238
6.19.3	Loading and TIMS of Zr 239
6.19.4	MC-ICP-MS of Zr 241
6.19.5	The Author's Monology 241
6.20	Precise Isotopic Measurement of Mo 241
6.20.1	Introduction 241
6.20.2	Chemical Separation of Mo 242
6.20.3	Positive-TIMS of Mo 242
6.20.4	Negative-TIMS of Mo 243
6.20.5	MC-ICP-MS of Mo 244
6.20.6	The Author's Monology 244
6.21	Precise Isotopic Measurement of Ru 245
6.21.1	Introduction 245
6.21.2	Chemical Separation of Ru 245
6.21.3	Loading and N-TIMS of Ru 247
6.21.4	MC-ICP-MS of Ru 247
6.22	Precise Isotopic Measurement for $^{107}\text{Pd}-^{107}\text{Ag}$ Isotope System 247
6.22.1	Introduction 247
6.22.2	Chemical Separation of Ag 248
6.22.3	Loading and TIMS of Ag 248
6.22.4	TIMS of Pd 249
6.22.5	Application of MC-ICP-MS to $^{107}\text{Pd}-^{107}\text{Ag}$ 250
6.22.6	The Author's Monology 250
6.23	Precise Isotopic Measurement of Cd 250
6.23.1	Introduction 250
6.23.2	Chemical Separation of Cd 251
6.23.3	Loading and TIMS of Cd 252
6.23.4	MC-ICP-MS of Cd 252
6.23.5	The Author's Monology 252
6.24	Precise Isotopic Measurement of Sn 253
6.24.1	Introduction 253
6.24.2	Chemical Separation of Sn 253
6.24.3	Loading and TIMS of Sn 255
6.24.4	MC-ICP-MS of Sn 256
6.24.5	The Author's Monology 256

6.25	Precise Isotopic Measurement of Sb	256
6.25.1	Introduction	256
6.25.2	Chemical Separation of Sb	256
6.25.3	Loading and N-TIMS of Sb	258
6.25.4	MC-ICP-MS of Sb	259
6.25.5	The Author's Monology	259
6.26	Precise Isotopic Measurement of Te	259
6.26.1	Introduction	259
6.26.2	Chemical Separation of Te	260
6.26.3	Loading and N-TIMS of Te	261
6.26.4	MC-ICP-MS of Te	262
6.26.5	The Author's Monology	262
6.27	Precise Isotopic Measurement for $^{138}\text{La}$ – $^{138}\text{Ba}$ and $^{138}\text{La}$ – $^{138}\text{Ce}$ Isotope Systems	263
6.27.1	Introduction	263
6.27.2	La–Ba Separation	264
6.27.3	Ba Isotope Analysis by TIMS	264
6.27.4	La–Ce Separation	264
6.27.5	Ce Isotope Analysis by TIMS.	264
6.27.6	The Author's Monology	265
6.28	Ultra-Precise Isotopic Measurement for $^{146}\text{Sm}$ – $^{142}\text{Nd}$ Isotope System	266
6.28.1	Introduction	266
6.28.2	Chemical Separation of Nd	266
6.28.3	High-Precision TIMS of Nd	268
6.28.4	The Author's Monology	269
6.29	Precise Isotopic Measurements of REEs by TIMS	269
6.29.1	Introduction	269
6.29.2	Separation REEs	269
6.29.3	TIMS of La	269
6.29.4	TIMS of Ce	270
6.29.5	TIMS of Nd and Sm	270
6.29.6	TIMS of Eu	270
6.29.7	TIMS of Gd	270
6.29.8	TIMS of Dy, Er, Yb, and Lu	271
6.29.9	The Author's Monology	271
6.30	Precise Isotopic Measurement for $^{176}\text{Lu}$ – $^{176}\text{Hf}$ Isotope System	271
6.30.1	Introduction	271
6.30.2	Separation Method of Lu and Hf (Plus Sm and Nd)	272
6.30.3	$^{176}\text{Hf}/^{177}\text{Hf}$ Ratio Measurement by MC-ICP-MS	273
6.30.4	Lu Measurement by MC-ICP-MS	274
6.30.5	Isotopic Measurement of Hf by TIMS	275
6.31	Chemical Separation of Ta	275
6.31.1	Introduction	275
6.31.2	Chemical Separation of Ta	276

6.31.3	Author's Monology	277
6.32	Precise Isotopic Measurement for $^{182}\text{Hf}$ – $^{182}\text{W}$ Isotope System	277
6.32.1	Introduction	277
6.32.2	Tungsten Separation from Metal Phases	278
6.32.3	Tungsten Separation from W-Poor Materials (Silicate Phases)	279
6.32.4	Tungsten Measurement by N-TIMS	281
6.32.5	Hafnium Measurement by P-TIMS	281
6.32.6	The Author's Monology	282
6.33	Precise Isotopic Measurement for $^{187}\text{Re}$ – $^{187}\text{Os}$ and $^{190}\text{Pt}$ – $^{186}\text{Os}$ Isotope Systems	282
6.33.1	Introduction	282
6.33.2	Overview of Chemical Separation of Os	283
6.33.3	Os Purification by Micro-Distillation	283
6.33.4	Re Purification	284
6.33.5	N-TIMS of Os	285
6.33.6	N-TIMS of Re	285
6.33.7	Separation of Re and Pt, and Determination of the $^{186}\text{Os}/^{188}\text{Os}$ Ratio	286
6.33.8	The Author's Monology	286
6.34	Precise Isotopic Measurement of Ir	287
6.34.1	Introduction	287
6.34.2	Chemical Separation of Ir	287
6.34.3	Loading and Mass Spectrometry of Ir	287
6.35	Precise Isotopic Measurement of Pb	289
6.35.1	Introduction	289
6.35.2	Separation Method of Pb	289
6.35.3	Pb Isotope Ratio Determination Using the Double Spike Method by TIMS	290
6.35.4	Pb Isotope Ratio Determination by MC-ICP-MS Using the Double Spike Method	292
6.35.5	Double Spikes Using Radioactive Pb	292
6.36	$^{226}\text{Ra}$ Determination by Total Evaporation TIMS (TE-TIMS)	293
6.36.1	Introduction	293
6.36.2	Separation of Ra	293
6.36.3	Total Evaporation TIMS (TE-TIMS) of Ra	295
6.36.4	Calculation of $^{226}\text{Ra}$ Abundance	296
6.36.5	MC-ICP-MS for $^{228}\text{Ra}/^{226}\text{Ra}$ Determination Using Multi-Ion Counting (MIC) Detection	296
6.36.6	The Author's Monology	297
6.37	Precise Isotopic Measurement for $^{230}\text{Th}/^{232}\text{Th}$	298
6.37.1	Introduction	298
6.37.2	Sequential U, Th, and Pb Separation Method	299
6.37.3	Measurements of $^{230}\text{Th}/^{232}\text{Th}$ and $^{229}\text{Th}/^{232}\text{Th}$ Ratios by TIMS	299
6.37.4	MC-ICP-MS for Determination of $^{230}\text{Th}/^{232}\text{Th}$ and $^{229}\text{Th}/^{232}\text{Th}$ Ratios	300

6.37.5	The Author's Monology	301
6.38	Precise Isotopic Measurement for $^{235}\text{U}$ – $^{231}\text{Pa}$ Disequilibrium Studies	302
6.38.1	Introduction	302
6.38.2	$^{233}\text{Pa}$ Spike Preparation	303
6.38.3	Separation Method of Pa in the Sample	304
6.38.4	TIMS of Pa	305
6.38.5	The Author's Monology	305
6.39	Precise Isotopic Measurement of U	305
6.39.1	Introduction	305
6.39.2	Separation of U	306
6.39.3	Determination of $^{234}\text{U}/^{238}\text{U}$ and $^{233}\text{U}/^{238}\text{U}$ by TIMS	306
6.39.4	Determination of $^{234}\text{U}/^{238}\text{U}$ by Total Evaporation-TIMS (TE-TIMS)	307
6.39.5	MC-ICP-MS for Determination of $^{234}\text{U}/^{238}\text{U}$ and $^{233}\text{U}/^{238}\text{U}$	307
6.39.6	The Author's Monology	309
