

Index

a

- Acetobacter suboxydans* 164
acetone–butanol–ethanol (ABE)
 fermentation 105–106
acetone synthesis, solventogenic
 clostridia
 application 113
 metabolic pathways and regulation
 113–114
 production processes 114
 production strain 114
Acidithiobacillus ferrooxidans 325
 biofilm formation and extracellular
 polymeric substances 330–334
acidogenic phase 107
acidophilic mineral-oxidizing
 microorganisms 325, 326, 328,
 339, 345
Acremonium chrysogenum 14, 255
 cephalosporin production 193
adenosine triphosphate (ATP) 32
aerobic bioreactors 43
aerobic degradation, of biopolymers
 363–365
aerobic mineralization, of carbonaceous
 compounds 363
aerobic vs. anaerobic conditions 43–44
 α -amylases 99, 257, 259
 α -glucans 296
aluminum hydroxyphosphate sulfate
 237
amino acids
 applications 139–140
 conventional strain development
 142–144
 economic significance 141–142
 in feed industry 140–141
 L-glutamate synthesis,
 Corynebacterium glutamicum
 145–148
 L-lysine 148–153
 L-phenylalanine 155–158
 L-threonine synthesis, by *Escherichia*
 coli 153–155
 production strain development
 144–145
aminoglycosides
 application 201
 biosynthesis 201–202
 history 201
 effect 201
 tobramycin production, by
 Streptomyces tenebrarius 203
ammonia-N 356, 360, 369
ammonia-oxidizing bacteria (AOB)
 362, 369
amorphadiene 20
anaerobic ammonia oxidation
 (ANAMMOX) 371
andront-1,4-diene-3,17-dione 312
andront-1-ene-3,17-dione 312
androstenedione (AD) 302, 304, 306,
 312, 313
antibiotic activity 185–187, 193, 197
antibiotic resistance 170, 203–207,
 209, 220, 255
antibiotics 190
 aminoglycosides 201–203
 bacteria and fungi 189–190

- antibiotics (*contd.*)
 - industrial development of natural products 207
 - macrolides 197–200
 - mechanism 187
 - resistant bacterial strains 206
 - tetracyclines 200–201
 - antibiotics β -lactam antibiotics 189
 - antibody fragments 238–239
 - anticalins 241
 - artemisinin 18–20, 203
 - Ashbya gossypii* 162, 168–171, 175
 - Aspergillus ficuum* 270
 - Aspergillus niger* 8, 10, 118, 120–123, 255, 258
 - 11 α -hydroxylation of progesterone* 315
 - citric acid production 122
 - gluconic acid production 129–130
 - phytase production 269–271
 - Aspergillus oryzae* 68, 86, 255, 258
 - Aspergillus terreus* 132–133
 - Aureobasidium pullulans* 296
- b**
- Bacillus licheniformis* 254, 258, 273
 - Bacillus stearothermophilus* 258
 - Bacillus subtilis* 87, 110, 162, 171–173, 250, 254
 - bacteriophage contamination 81–82
 - beer 2–4, 6, 8, 9, 25, 60–63, 66–69, 75, 95
 - Berzelius, Jöns 6
 - β -amylases 257
 - β -carotene 180–181
 - Blakeslea trispora* production 181
 - physiological impact and application 180
 - β -cyclodextrin 311, 318
 - β -(1,4)-glucan 297
 - 11- β -hydroxysteroid dehydrogenase 315
 - β -lactam antibiotics 189
 - bioreactor operations 192
 - cephalosporin production, *Acremonium chrysogenum* 193
 - penicillin and cephalosporin 190
 - penicillin production, *Penicillium chrysogenum* 193
