Foreword *xv*

Preface *xvii*

Part I Hydrodynamic Flow Confinement (HFC) 1

1 Hydrodynamic Flow Confinement Using a Microfluidic Probe 3

Emmanuel Delamarche, Robert D. Lovchik, Julien F. Cors, and Govind V. Kaigala

- 1.1 Introduction 3
- 1.2 HFC Principle 4
- 1.3 MFP Heads 7
- 1.4 Vertical MFP 8
- 1.5 Advanced MFP Heads and Holders 9
- 1.6 Surface Processing Using an MFP 11
- 1.7 MFP Components 15
- 1.8 Outlook 16
- Acknowledgments 17
- References 17

2 Hierarchical Hydrodynamic Flow Confinement (hHFC) and Recirculation for Performing Microscale Chemistry on Surfaces 21

Julien F. Cors, Julien Autebert, Aditya Kashyap, David P. Taylor, Robert D. Lovchik, Emmanuel Delamarche, and Govind V. Kaigala

- 2.1 Introduction 21
- 2.2 Hierarchical HFC 22
 - 2.2.1 Minimal Dilution of the Processing Liquid 22
 - 2.2.2 Numerical Simulations of Hierarchical HFC 22
 - 2.2.3 Dilution Measurement of hHFC 25
 - 2.2.4 Microscale Chemistry Using hHFC 26
- 2.3 Recirculation 28
 - 2.3.1 Recirculation of Small Volumes of Liquids within an MFP Head 28

- 2.3.2 Analytical Model: Diffusive Transport between Two Laminar Flows in hHFC 30
- 2.4 Microscale Deposition 33
 - 2.4.1 Patterning Proteins on Surfaces 33
 - 2.4.2 Protein Deposition Using hHFC and Recirculation 35
 - 2.4.3 Analytical Model: Convective Transport between Two Laminar Flows in hHFC 39
 - 2.4.4 Conclusion and Outlook 42
 - Acknowledgments 43
 - References 43

3 Design of Hydrodynamically Confined Microflow Devices with Numerical Modeling: Controlling Flow Envelope, Pressure, and Shear Stress 47

Choongbae Park, Kevin V. Christ, and Kevin T. Turner

- 3.1 Introduction 47
- 3.2 Theory 48
 - 3.2.1 Pressure, Velocity Distribution, and Nondimensional Quantities 48
 - 3.2.2 Shear Stress 50
- 3.3 Device and Experimental Methods for CFD Validation 50
- 3.4 Numerical Modeling of HCM devices 52
- 3.5 Envelope Size and Pressure Drop Across HCMs 54
- 3.6 Hydrodynamic Loads Generated by HCM Devices 58
- 3.7 Concluding Remarks 60
 - References 60

4 Hele-Shaw Flow Theory in the Context of Open Microfluidics: From Dipoles to Quadrupoles 63

Étienne Boulais and Thomas Gervais

- 4.1 Introduction 63
- 4.2 Fundamentals of Hele-Shaw Flows 64
 - 4.2.1 Derivation of Hele-Shaw Equation from the Navier–Stokes Equation 64
 - 4.2.2 Hele-Shaw Point Sources, Round Monopoles, and Square Monopoles 68
- 4.3 Applications to Microfluidic Dipoles and Quadrupoles 69
 - 4.3.1 Velocity Potentials for Dipoles and Quadrupoles 70
 - 4.3.2 Deriving Key Operation Characteristics for Dipoles and Quadrupoles 71
 - 4.3.2.1 Stagnation Points and the Hydrodynamic Flow Confinement Zone 71
 - 4.3.3 Numerical Investigation of Model Accuracy 74
- 4.4 Diffusion in Hele-Shaw Flows 76
 - 4.4.1 Advection–Diffusion Transport Equations 76
 - 4.4.2 High Péclet Number Asymptotic Solutions Near Stagnation Points 77
 - 4.4.2.1 Floating Gradient Along the Central Line in a Microfluidic Quadrupole 78

4.4.2.2	Diffusion Broadening in the HFC Envelope for Dipoles and Quadrupoles	80
4.4.3	Numerical Investigation of Model Accuracy	80
4.5	Conclusion	81
	References	82
5	Implementation and Applications of Microfluidic Quadrupoles	83
	<i>Ayoola T. Brimmo and Mohammad A. Qasaimeh</i>	
5.1	Introduction	83
5.2	Principles and Configurations of MQs	85
5.3	Implementation of MQs	87
5.4	MQ Analysis and Characterization	88
5.4.1	Stagnation Point Visualization	88
5.4.2	Hydrodynamic Flow Confinement	90
5.4.3	Concentration Gradient Measurement	91
5.4.4	Stagnation Point Hydrodynamic Manipulation	92
5.5	Application of MQs in Biology and Life Sciences	94
5.5.1	MQs for Biochemical Concentration Gradient Assays	94
5.5.2	Studying Neutrophil Chemotaxis Using the Lateral MQ	95
5.6	Summary and Outlook	95
	References	98
6	Hydrodynamic Flow Confinement-Assisted Immunohistochemistry from Micrometer to Millimeter Scale	101
	<i>Robert D. Lovchik, David P. Taylor, Emmanuel Delamarche, and Govind V. Kaigala</i>	
6.1	Immunohistochemical Analysis of Tissue Sections	101
6.2	Probe Heads for Multiscale Surface Interactions	102
6.2.1	Probe Design and Operating Conditions for Millimeter-Scale HFCs	103
6.2.2	Slit-Aperture Probes	105
6.2.3	Aperture-Array Probes	105
6.3	Immunohistochemistry with Microfluidic Probes	107
6.4	Micro-IHC on Human Tissue Sections	108
6.4.1	Micro-IHC on Tissue Microarrays	109
6.5	Millimeter-Scale Immunohistochemistry	109
6.6	Outlook	112

7.1	Introduction	115
7.1.1	Heterogeneity in Cells and Their Microenvironments	115

7.1.2	State of the Art: Microfluidic Devices for Nucleic Acid Analysis	116
7.1.3	Microfluidic Probe for Spatial Probing of Standard Biological Substrates	119
7.2	Methods	121
7.2.1	MFP Platform, Head, and Handling	121
7.2.2	Cell Handling	122
7.2.3	μ FISH Protocol	123
7.2.4	Local Lysis and Sample Retrieval Protocol	123
7.2.5	DNA and RNA Quantification	124
7.3	Results	124
7.3.1	Genomic Analysis	126
7.3.1.1	Study of Chromosomal Characteristics of Adherent Cells Using μ FISH	124
7.3.1.2	Operational Parameterization for μ FISH	126
7.3.1.3	Improved Probe Incubation and Consumption Using μ FISH	126
7.3.1.4	μ FISH Allows for Spatial Multiplexing of Probes	127
7.3.1.5	Selective Local Lysis for DNA Analysis Using the MFP (Spatialyse)	127
7.3.1.6	Operational Parameterization and Liquid Handling for Spatialyse	127
7.3.1.7	Quantitation of DNA in Local Lysate	129
7.3.2	Transcriptomic Analysis	130
7.3.2.1	Spatially Resolved Probing of Gene Expression in Adherent Cocultures	130
7.4	Discussion	131
7.5	Concluding Remarks	133

12	Aqueous Two-Phase Systems for Micropatterning of Cells and Biomolecules	251
	<i>Stephanie L. Ham and Hossein Tavara</i>	
12.1	Introduction	251
12.2	Small Molecules Applications	253
12.2.1	Bioreagent Patterning	253
12.2.2	Antibody Assays	253
12.2.3	Collagen Microgels	256
12.3	Cell Patterning	258
12.3.1	Bacterial Cells	258
12.3.2	Mammalian Cells	260
12.3.2.1	Cell Exclusion and Cell Island Patterning	260
12.3.2.2	Cell Co-Culturing	262
12.3.2.3	Heterocellular Stem Cell Niche Engineering	264
12.3.2.4	Skin Tissue Engineering	265
12.3.2.5	Three-Dimensional Cellular Models	266
12.4	Conclusions	269
	Acknowledgments	269
	References	269
13	Development of Pipettes as Mobile Nanofluidic Devices for Mass Spectrometric Analysis	273
	<i>Anumita Saha-Shah and Lane A. Baker</i>	
13.1	Introduction	273
13.2	Segmented Flow Analysis	275

- 13.3 Utility of Nano- and Micropipettes in Mass Spectrometry 276
- 13.4 Development of Nanopipette Probes for Local Sampling 276
- 13.5 MALDI-MS Analysis of Analyte Post-Nanopipette Sampling 278
- 13.5.1 Single *Allium cepa* Cell Analysis 279
- 13.5.2 Lipid Analysis in Mouse Brain 280
- 13.6 Development of Segmented Flow Sampling 282
- 13.7 Study of Intercellular Heterogeneity 286
- 13.8 Conclusion and Outlook 288
- Acknowledgments 290
- References 290

14 FluidFM: Development of the Instrument as well as Its Applications for 2D and 3D Lithography 295

Tomaso Zambelli, Mathias J. Aebersold, Pascal Behr, Hana Han, Luca Hirt, Vincent Martinez, Orane Guillaume-Gentil, and János Vörös

- 14.1 Microchanneled AFM Cantilevers 296
- 14.1.1 Silicon-Based Hollow Probes 296
- 14.1.2 Polymer-Based Hollow Probes 297
- 14.2 Development of the FluidFM 300
- 14.3 Calibration of Hollow Probes: Stiffness and Flow 303
- 14.3.1 Stiffness 303
- 14.3.2 Flow 305
- 14.4 FluidFM as Lithography Tool in Liquid 308
- 14.4.1 Patterning Nanoparticles 308
- 14.4.2 Electrochemical 2D Patterning and 3D Printing 312
- 14.5 Conclusions and Outlook 316
- Acknowledgments 317
- References 317

15 FluidFM Applications in Single-Cell Biology 325

Orane Guillaume-Gentil, Maximilian Mittelviehhaus, Livie Dorwling-Carter, Tomaso Zambelli and Julia A. Vorholt

- 15.1 Introduction 325
- 15.2 Nondestructive Cell Manipulations 326
- 15.3 Spatial Cell Manipulation 327
- 15.3.1 Substrate Micropatterning 327
- 15.3.2 Pick and Place 329
- 15.3.3 Cell Dispensing/Removal 330
- 15.4 Controlled Fluid Delivery 331
- 15.4.1 Extracellular Fluid Delivery 332
- 15.4.2 Intracellular Fluid Delivery 333
- 15.5 Mechanical Measurements 335
- 15.5.1 Quantification of Cell Elasticity 336
- 15.5.2 Quantification of Single-Cell Adhesion Forces 337
- 15.6 Ionic Current Measurements 341
- 15.6.1 Adaptation of the FluidFM Setup for Picoampere Current Measurements 342

- 15.6.2 Force-Controlled Patch Clamp with the FluidFM 343
- 15.6.3 Scanning Ion Conductance Microscopy with the FluidFM 346
- 15.7 Molecular Analyses 348
- 15.8 Conclusion and Future Perspectives 349
- References 350

- 16 Soft Probes for Scanning Electrochemical Microscopy 355**
Tzu-En Lin, Andreas Lesch, Alexandra Bondarenko, Fernando Cortés-Salazar, and Hubert H. Girault
- 16.1 Introduction 355
- 16.2 Principles of Scanning Electrochemical Microscopy (SECM) 356
 - 16.2.1 SECM Feedback Mode 356
 - 16.2.2 SECM Generation/Collection Modes 358
- 16.3 Soft Probes for SECM 358
 - 16.3.1 Fabrication and Characterization 359
 - 16.3.2 Operation Principles 360
- 16.4 Applications of Soft SECM Probes 360
 - 16.4.1 Reactivity Imaging of Extended Three-Dimensional Samples 362
 - 16.4.2 High-Throughput Patterning and Imaging of Delicate Surfaces 362
 - 16.4.3 Detection of Cancer Biomarkers in Skin Biopsy Sections 364
- 16.5 Conclusions and Future Perspectives 368
- References 368

- 17 Microfluidic Probes for Scanning Electrochemical Microscopy 373**
Alexandra Bondarenko, Fernando Cortés-Salazar, Tzu-En Lin, Andreas Lesch, and Hubert H. Girault
- 17.1 Introduction 373
- 17.2 Combining Microfluidics with SECM 374
 - 17.2.1 Fountain Pen Probe 374
 - 17.2.2 Electrochemical Push–Pull Probes 375
- 17.3 Electrochemical Characterization 377
 - 17.3.1 Cyclic Voltammetry 377
 - 17.3.2 SECM Experiments 378
- 17.4 Applications 382
 - 17.4.1 SECM Imaging of Human Fingerprints Contaminated with Explosive Traces 382
 - 17.4.2 Monitoring Enzymatic Reactions 384
 - 17.4.3 Local Manipulation of Adherent Live Cell Microenvironments 385
- 17.5 Conclusions and Outlook 389
- References 389

- 18 Chemistode for High Temporal- and Spatial-Resolution Chemical Analysis 391**
Alexander J. Donovan and Ying Liu
- 18.1 Introduction 391

18.2	Chemisthode Design and Operation	394
18.2.1	Chemisthode Design and Fabrication	394
18.2.2	Chemisthode Operation	394
18.3	Physical Principles Governing the Transport Processes	395
18.3.1	Non-dimensional Groups	395
18.3.2	Coalescence Dynamics of Incoming Plugs with the Hydrophilic Substrate	396
18.3.3	Mass Transfer at the Hydrophilic Substrate	398
18.4	Multiform Chemical Analysis Independent in Space and Time from Data Acquisition	400
18.4.1	Online Analysis	400
18.4.2	Parallel Offline Analysis	401
18.5	Applicability for Stimuli–Response Surfaces	403
18.5.1	Single Islet Cell Stimulation and Response Analysis	403
18.5.2	Isolation and Incubation of Individual Cells from Multispecies Mixtures	405
18.6	Challenges and Future Directions	406
	Acknowledgments	407
