Preface *xvii*

Part I Introduction 1

1	Nanobiomaterials: State of the Art	3
	<i>Jing Wang, Huihua Li, Lingling Tian, and Seeram Ramakrishna</i>	
1.1	Introduction	3
1.1.1	Properties of Nanobiomaterials	4
1.1.2	Interaction between Nanobiomaterials and Biological System	4
1.1.3	Biocompatibility and Toxicity of Nanobiomaterials	5
1.2	Nanobiomaterials for Tissue Engineering Applications	6
1.2.1	Vascular Tissue Engineering	7
1.2.2	Neural Tissue Engineering	9
1.2.3	Cartilage Tissue Engineering	12
1.2.4	Bone Tissue Engineering	13
1.3	Nanobiomaterials for Drug Delivery Applications	15
1.3.1	Carbon-Based Nanobiomaterials	15
1.3.2	Silica Nanoparticles	17
1.3.3	Polymer-Based Nanomaterials	18
1.4	Nanobiomaterials for Imaging and Biosensing Applications	18
1.4.1	Polymer-Based Nanobiomaterials	19
1.4.2	Quantum-Dot-Based Nanobiomaterials	19
1.4.3	Magnetic Nanoparticles	21
1.4.4	Gold Nanobiomaterials	22
1.4.5	Organic–Inorganic-Based Materials	23
1.4.6	CNT-Based Nanobiomaterials	23
1.5	Conclusions and Perspectives	24
	References	25

Part II Classification of Nanobiomaterials 37

- 2 Metallic Nanobiomaterials 39**
Magesh Sankar, Vasanth Gopal, Revathi Alexander, Geetha Manivasagam, and Murugan Ramalingam
- 2.1 Introduction 39
- 2.2 Conventional to Ultrafine-Grained Materials – A Novel Transformation 40
- 2.2.1 Bottom-Up Approach 42
- 2.2.2 Top-Down Approach 43
- 2.3 Severe Plastic Deformation (SPD) 43
- 2.3.1 Equal Channel Angular Pressing (ECAP) 43
- 2.3.2 High-Pressure Torsion (HPT) 45
- 2.3.3 Accumulative Roll Bonding (ARB) 46
- 2.3.4 Other SPD Processes 47
- 2.3.4.1 Multipass Caliber Rolling (MPCR) 47
- 2.3.4.2 Disintegrated Melt Deposition (DMD) 47
- 2.4 Mechanical Behavior of Metallic Nanobiomaterials 48
- 2.5 Corrosion 49
- 2.5.1 Corrosion Mechanism 50
- 2.5.2 Passivation of Metallic Biomaterials 50
- 2.5.3 Biological Environment and Its Influence on Corrosion of Metallic Biomaterials 51
- 2.5.4 Corrosion Behavior of Metallic Nanobiomaterials 52
- 2.6 Wear 53
- 2.6.1 Wear Assessment 54
- 2.6.2 Wear Aspects of Metallic Nanobiomaterials 55
- 2.7 Biocompatibility of Metallic Nanobiomaterials 56
- 2.8 Biomedical Application of Metallic Nanobiomaterials 59
- 2.9 Future Aspects 59
- References 60
- 3 Polymeric Nanobiomaterials 65**
Deepti Rana, Keerthana Ramasamy, Samad Ahadian, Geetha Manivasagam, Xiumei Wang, and Murugan Ramalingam
- 3.1 Introduction 65
- 3.2 Types of Polymeric Nanobiomaterials 66
- 3.3 Polymeric Nanofibers 67
- 3.4 Polymeric Nanofibers to Provide Microenvironmental Cues 69
- 3.5 Biological Relevance of Polymeric Nanofibers 71
- 3.6 Recent Trends in Polymeric Nanofibers 72
- 3.6.1 Hybrid Nanofibers 72
- 3.6.2 Gradient Nanofibers 74
- 3.7 Applications of Nanofibers in Regenerative Medicine 75
- 3.7.1 Bone Tissue Engineering 75
- 3.7.2 Nerve Tissue Engineering 77
- 3.7.3 Vascular Tissue Engineering 78

3.8	Concluding Remarks	79
	Acknowledgment	80
	References	80
4	Carbon-Based Nanobiomaterials	85
	<i>Samad Ahadian, Farhad Batmanghelich, Raquel Obregón, Deepti Rana, Javier Ramón-Azcón, Ramin Banan Sadeghian, and Murugan Ramalingam</i>	
4.1	Introduction	85
4.2	Tissue Engineering	87
4.2.1	Neural Tissue Engineering	87
4.2.1.1	CNTs in Neural Tissue Engineering	88
4.2.1.2	Graphene in Neural Tissue Engineering	89
4.2.2	Bone Tissue Engineering	89
4.2.2.1	CNTs in Bone Tissue Engineering	89
4.2.2.2	Graphene in Bone Tissue Engineering	92
4.3	Gene and Drug Delivery	92
4.3.1	CNTs in Delivery Systems	92
4.3.2	Graphene in Delivery Systems	93
4.4	Biosensing	93
4.4.1	CNTs in Biosensing	93
4.4.2	Graphene in Biosensing	94
4.5	Biomedical Imaging	95
4.5.1	CNTs in Biomedical Imaging	95
4.5.2	Graphene in Biomedical Imaging	95
4.6	Conclusions	97
	References	97

Part III Nanotechnology-Based Approaches in Biomaterials Fabrications 105

5	Molecular Self-Assembly for Nanobiomaterial Fabrication	107
	<i>Ling Zhu, Yanlian Yang, and Chen Wang</i>	
5.1	Introduction	107
5.1.1	Molecular Self-Assembly	107
5.1.2	Nanoscale Interactions and Their Roles in Self-Assembly	107
5.1.3	Technologies for the Characterization of Self-Assemblies	108
5.1.3.1	Microscopies	108
5.1.3.2	Dynamic Light Scattering	110
5.1.3.3	Spectroscopies	110
5.2	Self-Assembling Peptides	111
5.2.1	Peptide Self-Assembly and Its Applications	111
5.2.2	Driving Force for Peptide Self-Assembly	112
5.2.3	Secondary Structures of Peptide Self-Assemblies	112
5.2.3.1	β -Sheet-Forming Peptides	112

5.2.3.2	Coiled-Coil Peptides	114
5.2.3.3	Collagen-like Triple-Helical Peptides	114
5.2.3.4	Secondary Structure Transition Peptides	115
5.2.4	Peptide Nanostructures	115
5.2.4.1	Nanofibers and Hydrogel	115
5.2.4.2	Peptide Nanotubes	116
5.2.4.3	Vesicle/Spherical Structures from Surfactant Peptides	118
5.3	Nano-Drug Carriers	118
5.3.1	Liposomes	119
5.3.2	Polymeric Drug Carriers	121
5.3.2.1	Poly Lactic- <i>co</i> -Glycolic Acid (PLGA) Nanoparticles	121
5.3.2.2	PEGylation	121
5.3.2.3	Polymeric Micelles	122
5.3.3	Drug Delivery Strategies: Passive Targeting versus Active Targeting	123
5.3.4	Triggered Drug Release	123
5.3.5	Other Applications of Nano-Drug Carriers	124
5.4	Inorganic Nanobiomaterials	124
5.4.1	Graphene	124
5.4.2	Carbon Nanotubes	125
5.4.3	Surface Functionalization of Carbon Nanomaterials for Biomedical Application	126
5.4.3.1	Surface Functionalization of Graphene	126
5.4.3.2	Graphene–Peptide Hybrids	126
5.4.3.3	Layer-by-Layer Assembly of Graphene Films	127
5.4.3.4	Application of Functionalized Graphene	127
5.4.3.5	Surface Functionalization of Carbon Nanotubes	128
5.4.3.6	Application of Functionalized Carbon Nanotubes	128
5.5	Perspectives	129
	Acknowledgments	129
	References	129
6	Electrospraying and Electrospinning for Nanobiomaterial Fabrication	143
	<i>Liumin He, Yuyuan Zhao, Lingling Tian, and Seeram Ramakrishna</i>	
6.1	Introduction	143
6.2	What is Electrospinning?	143
6.2.1	The Electrospinning Process	144
6.2.2	The Electrospinning Device	144
6.2.3	Advances in Electrospinning Devices	146
6.2.3.1	Advances in the Collector	146
6.2.3.2	Advances in the Spinneret	146
6.3	Key Considerations in Electrospinning	146
6.3.1	The Spinnable Materials	146
6.3.1.1	Biopolymers	147
6.3.1.2	Water-Soluble Polymers	147
6.3.1.3	Organosoluble Polymers	147

6.3.1.4	Biodegradable Polymers	147
6.3.1.5	Copolymers	148
6.3.1.6	Melt-Electrospinnable Polymers	148
6.3.2	Parameters in Electrospinning	148
6.3.2.1	Solution Properties	148
6.3.2.2	Process Parameters	150
6.3.2.3	Ambient Parameters	151
6.3.2.4	Conclusion	151
6.4	The Application of Electrospun Materials in Biomedicine	151
6.4.1	Tissue Engineering Applications	151
6.4.1.1	Vascular Tissue Engineering	152
6.4.1.2	Bone Tissue Engineering	152
6.4.1.3	Nerve Tissue Engineering	153
6.4.1.4	Skin Tissue Engineering	154
6.4.1.5	Tendon and Ligament Tissue Engineering	155
6.4.2	Transport and Release of Drugs	156
6.4.3	Wound Dressing	157
6.5	Future Directions	159
	References	159
7	Layer-by-Layer Technique: From Capsule Assembly to Application in Biological Domains	165
	<i>Xi Chen</i>	
7.1	Definition of Layer-by-Layer (LbL) Assembly	165
7.2	Stabilizing Interactions between LbL Films	166
7.2.1	LbL Assembly via Electrostatic Bonding	167
7.2.2	LbL Assembly via Hydrogen Bonding	168
7.2.3	LbL Assembly via Covalent Bonding	168
7.2.4	Summary	169
7.3	Emerged Technologies Employed for LbL Assembly	169
7.3.1	Immersive LbL Assembly	169
7.3.2	Spin LbL Assembly	169
7.3.3	Spray LbL Assembly	171
7.3.4	Electric and Magnetic LbL Assembly	171
7.3.5	Fluidic LbL Assembly	172
7.3.6	Summary	172
7.4	Typical Methods for the Assembly of LbL Particles/Capsules	172
7.4.1	Centrifugation	172
7.4.2	Microfluidics	174
7.4.3	Electrophoresis	174
7.5	Application of LbL Capsules in Biological Environment	174
7.5.1	Therapeutic Delivery	174
7.5.2	Biosensors and Bioreactors	175
7.6	LbL Capsules as a Therapeutic Delivery Platform: Cargo Loading and Release	176
7.6.1	Cargo Loading	176

7.6.1.1	Pre-loading	176
7.6.1.2	Post-loading	176
7.6.1.3	Loading Cargo on Capsule Shells	176
7.6.2	Biological Stimuli–Responsive Cargo Release	177
7.6.2.1	Enzyme	177
7.6.2.2	pH	178
7.6.2.3	Redox	178
7.6.3	Summary	179
7.7	The Effect of Physicochemical Properties of LbL Capsules on Cellular Interactions	179
7.7.1	Morphology Effects	179
7.7.2	Surface Property Effects	180
7.7.3	Mechanical Effects	181
7.7.4	Summary	182
7.8	Conclusion and Outlook	182
	References	182
8	Nanopatterning Techniques	189
	<i>Lakshmi Priya Manickam, Akshay Bhatt, Deepti Rana, Serge Ostrovidov, Renu Pasricha, Xiumei Wang, and Murugan Ramalingam</i>	
8.1	Introduction	189
8.2	Types of Nanopatterning Techniques	190
8.3	Nano-biopatterning	190
8.4	Chemical Patterning	192
8.5	Topographical Patterning	196
8.6	Combinatorial Patterning	200
8.7	3D Patterning	201
8.8	Factors Influencing Nanopatterning	202
8.9	Concluding Remarks	204
	References	204
9	Surface Modification of Metallic Implants with Nanotubular Arrays via Electrochemical Anodization	211
	<i>Ming Jin, Shenglian Yao, and Luning Wang</i>	
9.1	Introduction	211
9.2	Fabrication of Nanotubular Arrays on Metals via Electrochemical Anodization	213
9.2.1	The Influence of Fluoride Concentration on TiO ₂ Nanotubes	216
9.2.2	The Effect of pH Value on the Formation of TiO ₂ Nanotubes	218
9.2.3	The Effect of Applied Potential on the Formation of TiO ₂ Nanotubes	219
9.2.4	The Effect of Anodization Duration on the Formation of TiO ₂ Nanotubes	219
9.2.5	Nanotube Oxide Layer on Titanium Alloys and Other Metals	220
9.3	Biocompatibility of Metals with Nanotubular Surfaces	223
9.3.1	Hydroxyapatite Formation on Nanotubular Arrays	223
9.3.2	In Vitro Biocompatibility Studies	225

- 9.3.3 In Vivo Biocompatibility Studies 227
- 9.3.4 Nanotubular Arrays for Drug Delivery and Other Preload Applications 228
- 9.4 Conclusion 230
- References 230

Part IV Nanobiomaterials in Biomedical Applications: Diagnosis, Imaging, and Therapy 239

10 Nonconventional Biosensors Based on Nanomembrane Materials 241

Lan Yin and Xing Sheng

- 10.1 Introduction 241
- 10.2 Soft Electronics 242
- 10.3 Injectable Electronics 246
- 10.4 Biodegradable Electronics 248
- 10.5 Conclusions 252
- References 253

11 Nanobiomaterials for Molecular Imaging 259

Prashant Chandrasekharan and Chang-Tong Yang

- 11.1 Introduction 259
- 11.1.1 Reporter Nanobiomaterial System for Molecular Imaging 260
- 11.1.2 Biomaterial Packing for Molecular Imaging 264
- 11.1.3 Targeting Ligands and Molecular Imaging 268
- 11.2 Conclusion 272
- References 272

12 Engineering Nanobiomaterials for Improved Tissue Regeneration 281

Liping Xie, Wei Qian, Jianjun Sun, and Bo Zou

- 12.1 Introduction 281
- 12.2 Extracellular Microenvironment: Role of Nanotopography 282
- 12.3 Type of Nanobiomaterials for Tissue Engineering 284
- 12.3.1 Nanoparticles and Nanoclusters 284
- 12.3.2 Nanofibrous Scaffolds 286
- 12.3.3 Nanocomposites 288
- 12.3.3.1 Nanocomposite Hydrogels 289
- 12.3.3.2 Nanocomposite Sponge 290
- 12.4 Applications of Nanobiomaterials to Tissue Regeneration 290
- 12.4.1 Nanobiomaterials for Neural Tissue Engineering 291
- 12.4.2 Nanobiomaterials for Bone Regeneration 294
- 12.4.3 Nanobiomaterials for Heart Regeneration 295
- 12.5 Conclusions and Future Perspectives 296
- References 298
