Preface *xi*

- 1 Field-Flow Fractionation Techniques** *1*
P. Stephen Williams
- 1.1 Introduction *1*
 - 1.2 Flow Field-Flow Fractionation *3*
 - 1.3 Hollow-Fiber Field-Flow Fractionation *10*
 - 1.4 Gravitational Field-Flow Fractionation *14*
 - 1.5 Sedimentation Field-Flow Fractionation *16*
 - 1.6 Thermal Field-Flow Fractionation *18*
 - 1.7 Electrical Field-Flow Fractionation *22*
 - 1.8 Magnetic Field-Flow Fractionation *24*
 - 1.9 Novel Techniques *27*
 - 1.9.1 Combined Fields *27*
 - 1.9.2 Two-Dimensional, Continuous Fractionation *28*
 - References *29*
- 2 Field-Flow Fractionation User Guide** *45*
Haiyang Dou, S. Kim Ratanathanawongs Williams, Mohammed Baalousha, and Céline Guéguen
- 2.1 Theoretical FFF Background *45*
 - 2.2 Different Variants of FIFFF *47*
 - 2.3 Sample Properties Measured by FFF *48*
 - 2.4 Selection of Detectors *48*
 - 2.5 FFF Selection Strategy *50*
 - 2.6 Guidance for FFF Separation *50*
 - 2.6.1 Sample Pre-Preparation *52*
 - 2.6.2 Selection of Carrier Liquid *52*
 - 2.6.3 Verify Sample Loss in the FFF Channel *53*

2.6.4	Optimize Field Strength	53
2.6.5	Optimize Channel Flow Rate	54
2.6.6	Evaluate Sample Overloading	54
2.6.7	Evaluate Sample Recovery	55
	Acknowledgments	55
	References	55
3	Polymers and Biohybrids	63
	<i>Albena Lederer and Susanne Boye</i>	
3.1	Polymer Architectures	64
3.2	FFF Systems for Polymer Characterization	66
3.3	FFF-Coupled Techniques for Polymer Characterization	68
3.4	FFF Separation of Polymers with Different Branching Topology, Composition, and Functionality	69
3.4.1	Hyperbranched Polyesters	70
3.4.2	Dendritic Glycopolymers	72
3.4.3	Single-Chain Nanoparticles	74
3.4.4	Flower-Like Polymer Structures by Self-Assembly	77
3.4.5	Polyethylene Block Copolymers	78
3.5	Biohybrids – Interaction Between Polymers and Biomolecules	80
3.5.1	Polymer-Dye/Drug Complexes	81
3.5.2	Biohybrid Structures Via Polymer–Protein Conjugation	84
3.5.3	Polyplexes: Conjugation of Polymers and DNA	88
3.5.4	Polymersomes	89
	References	91
4	Separation Techniques in Support of Elucidating Composition, Structure, and Function Relationships for Complex Polysaccharides	101
	<i>Kaitlin C. Lesco, Lieve M. L. Laurens, and S. Kim Ratanathanawongs Williams</i>	
4.1	Introduction	101
4.2	Polysaccharide Structures	102
4.3	Analytical Separation Techniques for Polysaccharides	103
4.3.1	Asymmetrical Flow Field-Flow Fractionation	103
4.3.2	Size Exclusion Chromatography	104
4.3.3	Analytical Ultracentrifugation	105
4.3.4	Anion Exchange Chromatography	106
4.4	Online Detection Methods	111
4.4.1	Light Scattering Detectors	112
4.4.2	Detectors for Elucidation of Chemical Properties	113
4.5	Comparing Techniques	114
4.5.1	Resolution	114
4.5.1.1	Size-Based Separation Techniques	114

4.5.1.2	Monosaccharide-Based Separation Techniques	117
4.5.2	Sample Recovery	117
4.5.3	Carrier Fluid Flexibility	118
4.5.4	MW or Size Range	118
4.6	Factors Influencing Separation of Polysaccharides	119
4.6.1	pH	119
4.6.1.1	pH Effects on Polysaccharide Solubility	119
4.6.1.2	pH Effects on Charge	120
4.6.2	Ionic Strength and Composition	120
4.6.2.1	Ionic Strength Effects on Separation	121
4.6.2.2	Ionic Strength Effects on Polysaccharide Structures	121
4.6.2.3	Ionic Composition	122
4.7	Examples of the Separation of Polysaccharides and Their Aggregates	122
4.7.1	Marine Polysaccharides	122
4.7.1.1	Size-Based Separation Techniques	127
4.7.1.2	Compositional and Charge-Based Separation Techniques	127
4.7.2	Plant Polysaccharides	128
4.7.2.1	Size-Based Separation Techniques	129
4.7.2.2	Compositional and Charge-Based Separation Techniques	130
4.7.3	Fungi Polysaccharides	131
4.7.4	Mammalian Polysaccharides	132
4.7.4.1	Size-Based Separation Techniques	132
4.7.4.2	Compositional and Charge-Based Separation Techniques	132
4.8	Future Outlooks	133
4.9	Acknowledgments	134
	References	134
5	Field-Flow Fractionation Methods for the Characterization of Natural Nanoparticles in Waters and Soils	149
	<i>Valentin de Carsalade Du Pont, Stéphane Faucher, and Gaëtane Lespes</i>	
5.1	Introduction	149
5.2	Sources, Occurrence, and Biophysicochemical Processes	149
5.3	Analytical Investigations	152
5.3.1	Preliminary	152
5.3.2	Analytical Methodologies	152
5.3.2.1	Sample Collection and Preparation	153
5.3.2.2	Injected Amount	155
5.3.2.3	Fractionation	156
5.3.2.4	Detection	163
5.3.2.5	Data Processing and Size Calibration	167
5.4	Current and Future Trends	173
	References	174

- 6 Field-Flow Fractionation Methods for the Characterization of Natural Applications, Challenges, and Considerations for Trace Element Analysis in Natural Waters Using Asymmetric Flow Field-Flow Fractionation - Ultraviolet - Inductively Coupled Plasma Mass Spectrometry (AF4-UV-ICPMS) 179**
Yu Wang, Chad W. Cuss, and William Shotyk
- 6.1 Introduction 179
- 6.2 Applications to the Analysis of TEs in Natural Waters 180
- 6.2.1 Size Fraction Definition 182
- 6.2.2 Case Studies 186
- 6.3 Challenges and Troubleshooting Strategies 187
- 6.3.1 Sample Losses 188
- 6.3.2 Contamination and Carryover 189
- 6.3.3 Troubleshooting Strategies 191
- 6.4 Considerations and Future Needs 193
- References 193
- 7 Online Coupling of Flow Field-Flow Fractionation (F4FFF) to Inductively Coupled Plasma Mass Spectrometry (ICPMS): Considerations for the Routine Separation and Analysis of Trace Elements at the Micro- and Nano-Scales 197**
Chad W. Cuss and Iain Grant-Weaver
- 7.1 Introduction and Overview 197
- 7.2 System Configuration and Components 198
- 7.3 QA/QC and Other Analytical Considerations 204
- 7.3.1 Trace Analysis and Initial Setup 204
- 7.3.2 Calibration, SRMs, LODs, Recovery, and Memory Effects 206
- 7.3.3 Data Analysis and Calculations 208
- 7.4 Optimization 211
- 7.4.1 AF4 Flow Program: Multielement Optimization 211
- 7.4.2 ICP-MS Operating Conditions 211
- 7.5 Further Routinization and Future Directions 213
- References 215
- 8 Analysis of Proteins and Enzymes by Field-Flow Fractionation (FFF) 219**
Ju Yong Lee and Wenwan Zhong
- 8.1 Demands for Separation of Intact Proteins 219
- 8.2 Separation Methods for Intact Proteins 220
- 8.3 Introduction of AF4- or HF5-Based Protein Analysis 223
- 8.3.1 FFF for Protein Fractionation Prior to MS Analysis in Proteomic Study 223
- 8.3.2 FFF for Study of Protein Aggregation 225
- 8.3.3 Application of Micro- and Nanoparticles Combining with Proteins 227
- 8.3.4 Lipoproteins 229

- 8.4 General Guidance for Applying AF4 and HF5 in Protein Analysis 230
 - 8.4.1 Membrane and Buffer of AF4 and HF5 for Proteomic Analysis 230
 - 8.4.2 Dimension and Thickness of Spacer and Flowrate Condition 231
 - 8.4.3 Detectors and Other Analytical Techniques 232
 - 8.4.4 Procedures Used in Development of an AF4- or HF5-Based Method for Protein Analysis 234
- 8.5 Conclusion 236
- References 236

- 9 Cell Sorting with FFF 241**
Gaëlle Begaud, Serge Battu, Philippe Cardot, Barbara Roda, Andrea Zattoni, and Pierluigi Reschiglian
 - 9.1 Introduction 241
 - 9.2 Common Features of Sedimentation FFF Methods 242
 - 9.2.1 Sample Preparation 243
 - 9.2.2 Hyperlayer Elution Mode 245
 - 9.3 Sedimentation Field-Flow Fractionation 249
 - 9.3.1 Apparatus 249
 - 9.3.1.1 Implementation of the Separation Channel 249
 - 9.3.1.2 The Speed Control Unit 251
 - 9.3.1.3 Rotating Seals 252
 - 9.3.1.4 Inlet/Outlet Tubing 252
 - 9.3.1.5 Channel Wall Materials, Mobile Phase, Recovery, and Decontamination Procedure 253
 - 9.3.1.6 Detection and Characterization of the Sample 256
 - 9.3.2 Practical Steps of Cell Sorting 258
 - 9.3.2.1 Biophysical Calibration of Fractogram 258
 - 9.3.2.2 Biological Calibration of the Fractogram 261
 - 9.3.2.3 Cell Reusability 263
 - 9.4 Gravitational FFF (GrFFF) 265
 - 9.4.1 Introduction 265
 - 9.4.2 GrFFF Separative Channel 266
 - 9.4.3 GrFFF Instrumental Setup 267
 - 9.4.4 GrFFF Separation Modes 268
 - 9.4.5 GrFFF Operations 270
 - 9.4.6 GrFFF Main Applications 271
 - 9.4.6.1 GrFFF for Cell Purging 271
 - 9.4.6.2 GrFFF of a Raw Sample 273
 - 9.4.6.3 NEEGA-DF 277
 - References 280
