### b

Baeyer–Villiger monooxygenases  
   (BVMO) 175  
 balance 222–224  
 batch reactor 224–228  
   consecutive reactions 227, 228  
   multiple reactions 226–228

parallel reactions 227  
 berberine bridging enzyme (BBE) 173  
 $\beta$ -agostic interaction 80  
 $\beta$ -hydrogen elimination 80  
 bifunctional catalysts 49  
 biocatalysis 6  
   cofactor regeneration systems  
     158–159  
   economic advantages 127  
   enantiomeric ratio E 168  
   enzymatic reactions 127  
   enzyme size acetate catalysed  
     reaction 138  
    $\alpha$ -helices and  $\beta$ -sheets 135  
   *Candida antarctica* B lipase 132  
   charge delocalisation system 132  
   deprotonation 132, 136  
   fluoride, nucleophilic attack 133  
   inter molecular *vs.* intra molecular  
     reactions 130  
   ketosteroid isomerase 136  
   *Pseudomonas aeruginosa*  
     lipase 135  
   serine, hydroxyl group of 132  
   substrate destabilisation 133  
   transition state stabilisation 135  
   Wilkinsons/Doyles catalyst 129  
 hydrolases 179–181  
   esterases/lipases/proteases 149  
   serine-hydrolases 149  
   stereochemistry 154  
 (dynamic) kinetic resolutions  
   and desymmetrisation  
     164–168

    - activation of catalysts 356–357
    - calcination/thermal treatment 354–356
    - chemical vapor deposition 337–338
    - colloidal synthesis routes 334–337
    - co-precipitation 345–349
    - deposition precipitation (DP) 341–344
    - drying 352–354
    - impregnation 350–352
    - ion adsorption 338–341
  - support materials, synthesis of 317–333
    - carbon materials 331–333
    - mesoporous metal oxides 318–326
      - alumina 322–324
      - fumed oxides 319–320
      - silica gel 320–322
    - ordered mesoporous materials 324–326
    - ordered microporous materials 326–331
  - metal organic frameworks (MOF) 330–331
  - zeolites 326–330
  - zeolitic imidazolate frameworks 331
  - shaping 333
  - supported metals, heterogeneous catalysts 41–51
  - Suzuki–Miyaura coupling, 120syndiotactic PP 115
