

Contents

	Preface	<i>ix</i>
1	Introduction to Multiferroics and Its Application	1
	<i>Qu Yang, Bin Peng, Ziyao Zhou, and Ming Liu</i>	
1.1	Concept of Multiferroics and the Existing Magnetization Manipulation Methods for Practical Applications	1
1.2	Typical Multiferroic Heterostructures and Their Characteristics	2
	References	2
2	Multiferroic Materials	5
	<i>WanJun Peng, Ziyao Zhou, and Ming Liu</i>	
2.1	Introduction	5
2.2	Single-Phase Multiferroics	7
2.3	Bulk Composites	12
2.3.1	Ceramic Composites	13
2.3.2	Magnetic Alloy-Based Composites	15
2.3.3	Polymer-Based Composites	16
2.3.4	Converse ME Effect in Bulk Composites	18
2.4	Composite Thin Films	19
2.4.1	1-3 Type Columnar Composite Thin Films	20
2.4.2	0-3 Type Particle Composite Thin Films	22
2.4.3	2-2 Type Laminated Composite Thin Films	23
2.4.4	Quasi 2-2 Type Composite Thin Films	27
2.4.5	Organic Composite Thin Films	29
2.5	Two-Dimensional Multiferroics	32
	References	36
3	Mechanisms of Multiferroic Material	51
	<i>Yuxin Cheng, Weixiao Hou, Mingmin Zhu, Bin Peng, Ziyao Zhou, and Ming Liu</i>	
	Summary	51
3.1	Strain/Stress-Induced ME Coupling	51
3.2	EM-Spin-Wave Coupling	55
3.3	Interfacial Charge-Induced ME Coupling	65

3.4	BFO System	70
3.5	Spiral Spin Order Control RMnO ₃	94
3.6	Other Novel Interfacial ME Coupling Effects	100
	References	109
4	Multiferroic Simulations	121
	<i>Yue-Wen Fang, Wen-Yi Tong, and Chun-Gang Duan</i>	
4.1	First-Principles Calculation	121
4.1.1	Origins of Ferroelectricity in Type-I Multiferroics	122
4.1.2	Conventional Ferroelectricity	123
4.1.3	πs^2 Lone-Pair Stereochemical Activity	123
4.1.4	Geometric Ferroelectricity	124
4.1.5	Electronic Ferroelectricity	125
4.2	Spin-Driven Ferroelectricity in Type-II Multiferroic Materials	126
4.2.1	Ferroelectricity Induced by Noncollinear Magnetism	126
4.2.2	Ferroelectricity Induced by Collinear Magnetism	129
4.3	Prediction of Novel Multiferroics	130
4.3.1	Strain Engineering	130
4.3.2	Systems Based on Ordered Perovskite Cells	132
4.4	Phase-Field Simulation	134
4.4.1	Simulation of Ferroelectric Switching Properties	134
4.4.2	Ferroelectric Switching in BiFeO ₃	135
4.4.3	Ferroelectric Switching in BaTiO ₃ /SrTiO ₃ Superlattice	137
4.5	Simulation of Coupled Ferroic Domains	139
4.5.1	Phase-Field Simulation in Magnetoelectric Composites	140
4.5.2	Phase-Field Simulation in Single-Phase Multiferroics	142
4.6	Theoretical Models of Magnetoelectric Coupling in Multiferroic Heterostructures	143
4.6.1	Interface Magnetoelectric Effect	144
4.6.2	Spin-Dependent Screening-Induced Magnetoelectric Effect	146
	References	151
5	Multiferroic RF/Microwave Devices	157
	<i>Wanjun Peng, Brandon Howe, and Xi Yang</i>	
5.1	Voltage Control of FMR	157
5.1.1	Voltage Control of FMR via Strain/Stress	158
5.1.1.1	Strain/Stress Modulation for Materials with In-Plane Easy Axis	158
5.1.1.2	Strain/Stress Modulation for Materials with Out-of-Plane Easy Axis	159
5.1.2	Voltage Control of FMR via the Combined Effects of Strain/Stress and Other Mechanisms	160
5.1.2.1	Strain and Charge Co-Mediated FMR	160
5.1.2.2	Strain and Surface Spin Torque Co-Mediated FMR	160
5.2	Voltage Control of FMR via Ionic Liquid Gating	161
5.3	RF/Microwave Devices in General	163
5.4	State-of-the-Art Tunable RF/Microwave Devices	164
5.4.1	Magnetic and Magnetoelectric Inductors	164

5.4.2	Bandpass Filters and Bandstop Filters/Attenuators	164
5.4.3	Phase Shifters and Delay Lines	167
5.4.4	Multiferroic/Magnetolectric Antennas	168
5.5	Multiferroic RF/Microwave Devices in Future	168
	References	169
6	Toward Multiferroic Memories	175
	<i>Zhongqiang Hu, Qu Yang, Xinger Zhao, and Gail J. Brown</i>	
6.1	Introduction	175
6.2	Voltage Control of Magnetism	176
6.2.1	Voltage Control of Magnetoresistance	177
6.2.2	Voltage Control of Exchange Bias	177
6.2.3	Voltage Control of Domain Dynamics	184
6.2.4	Toward Nonvolatile Control of Magnetism	188
6.3	Magnetic Memories in General	189
6.4	State-of-the-Art Multiferroic Memories	191
6.5	Multiferroic Memories in Future	196
	References	197
7	Multiferroic Sensors	203
	<i>Zhiguang Wang, Menghui Li, Tianxiang Nan, and Nianxiang Sun</i>	
7.1	Introduction	203
7.2	ME Coupling	203
7.3	Magnetic Sensors in General	204
7.4	State-of-the-Art Multiferroic Sensors	205
7.4.1	Highly Sensitive Bulk ME Sensor	206
7.4.2	Miniature Nanoelectromechanical Systems (NEMS) Sensor Based on Nanoplate Resonator	207
7.4.3	A Novel Flexible Sensor Based on AMR Effect	208
	References	209
8	Integrated Multiferroic Inductors – Toward Reconfiguration	211
	<i>Yuan Gao, Tian Wang, Zhongqiang Hu, and Bin Peng</i>	
8.1	Introduction	211
8.2	Magnetic Inductors	211
8.2.1	Inductor Structures	211
8.2.2	Magnetic Materials	213
8.3	Tunable Multiferroic Inductors	217
8.3.1	Tunability for RFIC and MMIC	217
8.3.1.1	Ferroelectric Varactors	217
8.3.1.2	RF MEMS	219
8.3.1.3	FET Switches	220
8.3.1.4	Tunable Multiferroics	221
8.3.2	Tunability for Inductors	222
8.4	Recent Progress of Magnetic Inductors and Voltage Tunable Inductors	226
	References	230

9	Multiferroics in Future	237
	<i>Qu Yang, Bin Peng, Ziyao Zhou, and Ming Liu</i>	
9.1	Novel Multiferroic Devices and Applications	237
9.1.1	Magnetoelectric Recording	237
9.1.2	Magnetoelectric Random Access Memories	238
9.1.3	Electrically Tunable Microwave Devices	238
9.2	Novel Multiferroic Composites	239
9.2.1	Exchange Bias	239
9.2.2	Spin Wave	239
	References	239
	Index	243
