Ohio State Carbonation Ash Reactivation (OSCAR) process 405
1 MW_{th} TU Darmstadt pilot plant 411
1.7 MW_{th} calcium looping system 410
1.9 MW_{th} calcium looping system 410
1.9 MW_{th} facilities 414
oxidative coupling of methane (OCM) 248–249
Oxidizer FD fan power 362, 367, 368, 373, 374
oxidizer reactor 336–338, 340–342, 351, 368, 372, 374
oxy-combustion technology, for CO_2 7, 23
oxygen carrier conversion 4, 6, 9, 10, 23, 368, 374
oxygen carrier, CLOU
advantages 201
combined and mixed oxides 210–214
copper oxide 209
environment and human health 201
equilibrium partial pressure of O_2 202–207
fluidized bed system 200
kinetics of oxidation and reduction 217–219
metal oxide 201
naturally occurring oxygen carriers 216–217
oxide system 201
reactions in fuel reactor 201
thermal considerations 207–208
oxygen carrier flow ratio 19, 33
oxygen carrier makeup rate and price 370–371
oxygen carrier material 10, 27, 63, 97, 98, 106, 109, 113, 162, 173, 179, 180, 185, 191, 192, 207, 208, 237, 263, 294
oxygen carrier of $CaMn_{0.775}Ti_{0.125}Mg_{0.1}O_3$ 212
oxygen carrier of $CaMn_{0.875}Ti_{0.125}O_3$ 210
oxygen carrier reduction step 230
oxygen carrier regeneration step 230
oxygen carrier structure
supported 271–275
unsupported 264–271
oxygen uncoupling reaction 95, 217

packed bed reactors (PBR) 61
chemical looping combustion

packed bed reactors (PBR) (*contd.*)
reactor heat management strategies 66
CO_2 absorption 71
counter-current feeding 69
gas conditions 69
hot gas desulphurization 73
HRSG 71
chemical looping reforming 73–78
oxygen carriers 63–65
partial oxidation (POx) processes 241
particle attrition 263, 264, 278, 291, 387
particle coefficient of restitution 311
particle drag coefficient 311
particle-laden flow 310
perovskites 207, 234, 274
phase-coupled SIMPLE scheme 324
pollutant emission 157
porous magnetite 267, 268
powder river basin (PRB) 23, 130
pre-combustion capture 305
pressurized chemical looping combustion combined cycle (PCLC-CC)
concept 124–125
direct coal-fueled PCLC at SEU, China 127
direct coal-fueled PCLC developed by UK-CAER 125–127
pressurized chemical looping combustion, solid fuel
coal-based PCLC-CC
concept 124
fuel-reactor chemical process 125
direct coal-fueled PCLC
SEU 127
UK-CAER 125
heat integration 155
hot flue gas cleanup 155–156
fuel reactor side 129–139
monitor and control of hydraulic flow 155
online ash separation 156
solid behaviors
experimental setup 130
materials 129
solid waste management 157
tech-economic analysis 143
technical gaps 155
transient oxidation of magnetite to hematite 128–129
pressurized fluid bed combustors (PFBC) 53
pressurized fluidized bed combined cycle (PFBC) 123
pressurized reactors 52–53, 127, 425
primary oxide selection
combustion experiments 163
thermodynamic and reaction properties, coal-CLC 164
copper oxide 162
Fe_2O_3 162
NiO 162
TGA 163
process pressure balance 17–18
pseudo-3D CLC fuel reactor 328
Pt/MgO catalyst 442
pure Mn_2O_3/Mn_3O_4 203
