List of Contributors *xiii*

1	Natural Products as Enzyme Inhibitors	1
	<i>David M. Pereira, Catarina Andrade, Patrícia Valentão, and Paula B. Andrade</i>	
1.1	Why Are Natural Products Good Enzyme Inhibitors?	1
1.2	Drawbacks of Natural Products	4
1.3	The Future of Natural Products Drug Discovery	5
1.3.1	New Sources and New Production Methods	5
1.3.2	New Strategies for Delivery	9
1.3.3	New Targets?/Drug Repurposing	12
1.4	Conclusion	13
	References	13
2	Molecular Targets of Clinically Relevant Natural Products from Filamentous Marine Cyanobacteria	19
	<i>Lik Tong Tan</i>	
2.1	Introduction	19
2.2	Histone Deacetylase Inhibitors	20
2.2.1	Largazole	20
2.2.2	Santacruzamate A	22
2.3	Proteasome Inhibitors	23
2.3.1	Carmaphycins	23
2.4	Protease Enzymes	24
2.4.1	Serine Protease Inhibitors	24
2.4.2	Falcipain Inhibitors	27
2.4.2.1	Gallinamide A	27
2.4.3	Cathepsin Inhibitors	28
2.4.4	β -Secretase 1 (BACE1) Inhibitors	30
2.4.4.1	Tasiamide B	30
2.5	Protein Kinase C Modulators	30
2.5.1	Aplysiatoxins	30
2.6	Interference of the Actin and Microtubule Filaments	31
2.6.1	Dolastatins 10/15	31
2.6.2	Bisebromoamide	32

2.7	Sec61 Protein Translocation Channel Inhibitors	32
2.7.1	Apratoxin A	32
2.8	Prohibitin Inhibitors	34
2.8.1	Aurilide	34
2.9	Sodium Channels Modulators	35
2.10	Conclusions	35
	References	36
3	Natural Angiotensin Converting Enzyme (ACE) Inhibitors with Antihypertensive Properties	45
	<i>Maria Margalef, Francisca I. Bravo, Anna Arola-Arnal, and Begoña Mugerza</i>	
3.1	Introduction	45
3.2	Mechanisms of Blood Pressure Regulation	46
3.2.1	Renin–Angiotensin–Aldosterone System	46
3.3	The Treatment of Hypertension	47
3.3.1	Angiotensin Converting Enzyme Inhibitors	47
3.4	Natural Products as Angiotensin Converting Enzyme Inhibitors	50
3.4.1	Polyphenols	50
3.4.2	Protein Derived Peptides	55
3.5	Conclusions	58
	References	58
4	Phospholipase A₂ Inhibitors of Marine Origin	69
	<i>Tânia C. Silva, David M. Pereira, Patrícia Valentão, and Paula B. Andrade</i>	
4.1	Relevance of Marine Organisms	69
4.2	Inflammation	69
4.2.1	Phospholipase A ₂	70
4.3	Marine Molecules as PLA ₂ Inhibitors	72
4.3.1	Sponge-Derived Metabolites	72
4.3.2	Metabolites from Other Organisms	83
4.4	Conclusion	86
	References	86
5	β-Secretase (BACE1) Inhibitors from Natural Products	93
	<i>Wei-Shuo Fang, Deyang Sun, Shuang Yang, and Na Guo</i>	
5.1	Introduction	93
5.2	Flavonoids	94
5.2.1	Flavones, Flavonols and Flavone Glycosides	95
5.2.2	Dihydroflavonoids	96
5.2.3	Biflavonoids	98
5.2.4	Chalcones	100
5.2.5	Isoflavonoids	102
5.2.6	Catechins	102
5.2.7	Xanthones	104
5.3	Chromones	104
5.4	Phenolic Acids and Tannins	105
5.4.1	Phenol Acids	105

5.4.2	Tannins	106
5.4.3	Simple Phenol Derivatives and Polyphenols	107
5.5	Stilbenes and Derivatives	110
5.6	Coumarins	112
5.7	Benzoquinones and Anthraquinones	114
5.8	Alkaloids	116
5.9	Terpenes	118
5.10	Lignans	120
5.11	Fatty Acid	121
5.12	Saccharides, Peptides and Amino Acid Derivatives	121
5.13	BACE1 Inhibitory Active Extracts of Natural Products	122
5.14	Bioassays for the Discovery of BACE1 Inhibitors	124
5.15	Prospective	124
5.16	Acknowledgements	125
	References	125
6	Hypoglycaemic Effects of Plants Food Constituents via Inhibition of Carbohydrate-Hydrolysing Enzymes: From Chemistry to Future Applications	135
	<i>Monica R. Loizzo, Marco Bonesi, Seyed M. Nabavi, Eduardo Sobarzo-Sánchez, Luca Rastrelli, and Rosa Tundis</i>	
6.1	Introduction	135
6.2	α -Amylase	136
6.3	α -Glucosidase	137
6.4	Hypoglycaemic Natural Compounds	137
6.4.1	Flavonoids	139
6.4.2	Phenolic Acids	141
6.4.3	Terpenoids	142
6.4.4	Alkaloids	147
6.4.5	Tannins	150
6.4.5.1	Ellagitannins	150
6.4.6	Miscellaneous	152
6.5	Conclusions and Future Perspective	152
	Abbreviations	153
	References	153
7	Natural Products Targeting Clinically Relevant Enzymes of Eicosanoid Biosynthesis Implicated in Inflammation and Cancer	163
	<i>Gorla V. Reddy, Nagendra S. Yarla, Shobha Ediga, Dinesh K. Tiwari, Naresh Kumar, Sandhya Singh, Vasundhra Bhandari, Priyanka Voori Giri, Anupam Bishayee, Chintalapally V. Rao, and Pallu Reddanna</i>	
7.1	Introduction	163
7.2	Eicosanoid Biosynthetic Pathways	164
7.2.1	Phospholipases	165
7.2.2	Cyclooxygenases	166
7.2.3	Lipoxygenases	166
7.2.4	Cytochrome P450 (CYP)-dependent Monooxygenases	166

7.3	Eicosanoid Biosynthetic Pathways in Inflammation and Cancer	167
7.3.1	Role of PLA ₂ s in Inflammation and Cancer	167
7.3.2	Role of COXs in Inflammation and Cancer	168
7.3.3	Role of LOXs in Inflammation and Cancer	169
7.3.4	Role of CYP-dependent Monooxygenases in Inflammation and Cancer	170
7.4	Natural Products as Anti-inflammatory Agents	170
7.4.1	Natural Products from Plant Origin	170
7.4.1.1	Baicalein	170
7.4.1.2	Berberine	171
7.4.1.3	Chebulagic Acid	172
7.4.1.4	Curcumin	172
7.4.1.5	Ellagic Acid	173
7.4.1.6	Epigallocatechin-3-Gallate	174
7.4.1.7	Eugenol	174
7.4.1.8	Fisetin	174
7.4.1.9	Gallic Acid	175
7.4.1.10	Genistein	175
7.4.1.11	Guggulsterone	176
7.4.1.12	Piperine	176
7.4.1.13	Quercetin	177
7.4.1.14	Resveratrol	178
7.4.1.15	Silibinin	178
7.4.1.16	Terpenoids	179
7.4.1.17	Triptolids	180
7.4.1.18	Ursolic Acid (UA)	181
7.4.2	Natural Products from Marine Origin	182
7.4.2.1	Axinelline A	182
7.4.2.2	Scalaradial	182
7.4.2.3	Tetrapetalone	183
7.4.3	Natural Products from Microorganisms	183
7.4.3.1	C-Phycocyanin	183
7.4.3.2	Kojic Acid	184
7.4.3.3	Lobaric Acid	185
7.5	Conclusions and Future Directions	185
	References	186
8	Anti-HIV Natural Products	209
	<i>Jack Ho Wong, Tzi Bun Ng, Chi Fai Cheung, Chit Tam, Charlene C. W. Ng, Ryan Tse, Tak Fu Tse, and Helen Chan</i>	
8.1	Introduction	209
8.2	Ribosome-Inactivating Proteins	209
8.3	Reverse Transcriptase Inhibitors	210
8.3.1	Antifungal Proteins	210
8.3.2	Defensins and Defensin-Like Anti-Fungal Peptides	210
8.3.3	Cathelicidins	210
8.3.4	Whey Proteins and Peptides	211

8.3.5	Proteases and Protease Inhibitors	211
8.3.6	Lectins	211
8.3.7	Laccases and Ribonucleases	212
8.3.8	Polysaccharides and Polysaccharopeptides	212
8.3.9	Other HIV-Reverse Transcriptase Inhibitors	212
8.4	Inhibitors of HIV Reverse Transcriptase Associated RNase H	213
8.5	HIV-1 Protease Inhibitors	213
8.6	HIV-1 Integrase Inhibitors	214
8.7	Discussion	214
	Acknowledgements	216
	References	216
9	Natural Inhibitors of Mitochondrial Respiratory Chain: Therapeutic and Toxicological Implications	225
	<i>Fernando Peláez, Nuria de Pedro, and José R. Tormo</i>	
9.1	Introduction: The Structure of the Electron Transport Chain	225
9.2	Natural Inhibitors of the Respiratory Chain	228
9.2.1	Complex I Inhibitors	228
9.2.1.1	Acetogenins from Annonaceae as Complex I Inhibitors	231
9.2.2	Complex II Inhibitors	233
9.2.3	Complex III Inhibitors	234
9.2.4	Complex IV Inhibitors	235
9.2.5	Complex V Inhibitors	237
9.3	Therapeutic, Agrochemical and Toxicological Implications	239
9.3.1	ETC Inhibitors as Fungicides	239
9.3.2	ETC Inhibitors as Insecticides, Acaricides, and Anthelmintic Agents	240
9.3.3	ETC Inhibitors with Activity Against Protozoan Parasites	241
9.3.4	Diabetes and ETC Inhibition	241
9.3.5	ETC Inhibition as a Therapeutic Strategy in Cancer	242
9.3.5.1	Mechanistic Insights on the Anti-Tumour Properties of ETC Inhibitors	244
9.3.6	Toxicological Implications of ETC Inhibition	245
9.3.6.1	Neurotoxicity and ETC Inhibition	245
9.3.6.2	Other Toxicity Aspects of ETC Inhibition	246
9.4	Conclusions	247
